Explanation of Changes in Financing
(\$ in Thousands)

The Fiscal Year 1996 program has changed since the presentation of the FY 1997 budget as noted below:

1. Program Requirements (Total). There has been a net decrease to the appropriation (adjusted) of \$9,227, as a result of changes in program requirements as noted below.
2. Program Requirements (Service Account). There has been a net increase to the appropriation (adjusted) of \$23,033. This net change is comprised of an increase in program requirements (\$23,033). These changes included a rescission to the FY 1996 program approved in the FY 1997 DoD Appropriations Act (-\$4,500), a rescission for Administrative and Personal Services (-\$6,739), a rescission to finance F-16 sales to Jordan (-\$45,000) based on reduced inflation rates, reductions reflected on the FY 1996 DoD Omnibus Reprogramming Action to specific programs (-\$10,600) and a general reduction based on lower inflation rates (-\$2,506), a Supplemental Appropriation added funds to the Shallow Water MCM Demonstrations program (+\$10,100), four transfers into the appropriation from a DoD central transfer account were effected to support the RDT&E Counter Drug program added funds (+\$30,265), a transfer to consolidated the Non-Lethal Weapons Technology added funds (+\$4,590), and the withdrawal of proposed rescissions to specific programs.

3. Program Requirements (Reimbursable). There has been a net increase to the appropriation of \$13,808, as a result of changes in reimbursable program requirements (\$13,806).

Comparison of FY 1996 Program Requirements as reflected
in the FY 1997 Budget with FY 1996 Program Requirements
as shown in the FY 1998 Budget

Summary of Requirements (\$ In Thousands)

	Total Program Requirements per FY 1997 Budget	Total Program Requirements per FY 1998 Budget	Increase (+) or Decrease (-)
01 - Basic Research	377,362	371,516	-5,846
02 - Applied Research	541,372	537,711	-3,661
03 - Advanced Technology Development	444,655	472,184	+27,529
04 - Demonstration and Validation (DEM/VAL)	1,718,754	1,712,926	-5,828

06 - RDTE Management Support	571,115	684,676	+113,561
07 - Operational Systems Development	2,370,501	2,347,690	-22,811
Total Fiscal Year Program	8,494,534	8,471,501	-23,033

Explanation by Budget Activity
(\$ In Thousands)

01. Basic Research (-\$5,846) - Changes to this budget activity resulted from a rescission for Administrative and Personal Services (-\$1,262), a rescission to finance F-16 sales to Jordan (-\$2,004) based on reduced inflation rates, a transfer to support the Small Business Innovative Research (SBIR) program (-\$1,935), and other changes in program requirements which required minor reprogrammings (-\$645).

02. Applied Research (-\$3,661) - Changes to this budget activity resulted from a rescission for Administrative and Personal Services (-\$353), a rescission to finance F-16 sales to Jordan (-\$2,945) based on reduced inflation rates, a

transfer to support the Small Business Innovative Research (SBIR) program (-\$8,371), and other changes in program requirements which required minor reprogrammings (+\$8,008).

03. Advanced Technology Development (+\$27,529) - Changes to this budget activity resulted from a rescission for Administrative and Personal Services (-\$1,844), a rescission to finance F-16 sales to Jordan (-\$2,528) based on reduced inflation rates, a transfer to support the Small Business Innovative Research (SBIR) program (-\$5,291), two reductions reflected on the FY 1996 DoD Omnibus Reprogramming Action against the Advanced Technology Transition program (-\$4,800) and a general reduction based on lower inflation rates (-\$1,200), and other changes in program requirements which required minor reprogrammings (-\$3,108). Additionally, a Supplemental Appropriation added funds to the Shallow Water MCM Demonstrations program (+\$10,100) and a proposed rescission to the AARGM program was withdrawn (+\$36,300).

04. Demonstration and Validation (DEM/VAL) (-\$5,828) - Changes to this budget activity resulted from a rescission for Administrative and Personal Services (-\$1,587), a rescission to finance F-16 sales to Jordan (-\$9,144) based on reduced inflation rates, a transfer to support the Small Business Innovative Research (SBIR) program (-\$15,807), a reduction reflected on the FY 1996 DoD Omnibus Reprogramming Action based on lower inflation rates (-\$343), and other changes in program requirements which required minor reprogrammings (+\$16,463). Additionally, a transfer to consolidated the Non-Lethal Weapons Technology added funds (+\$4,590).

05. Engineering and Manufacturing Development (EMD) (-\$51,205) - Changes to this budget activity resulted from a rescission for Administrative and Personal Services (-\$517), a rescission to finance F-16 sales to Jordan (-\$12,682) based on reduced inflation rates, a transfer to support the Small Business Innovative Research (SBIR) program (-\$42,566), a reduction reflected on the FY 1996 DoD Omnibus Reprogramming Action against the New Design SSN Development program (-\$5,800), and other changes in program requirements which required minor reprogrammings (+\$10,360).

06. RDTE Management Support (+\$113,561) - Changes to this budget activity resulted from a rescission for Administrative and Personal Services (-\$273), a rescission to finance F-16 sales to Jordan (-\$3,063) based on reduced inflation rates, a transfer to support the Small Business Innovative Research (SBIR) program (+\$109,696), and other changes in program requirements which required minor reprogrammings (+\$7,201).

07. Operational Systems Development (-\$22,811) - Changes to this budget activity resulted from a rescission for Administrative and Personal Services (-\$903), a rescission to finance F-16 sales to Jordan (-\$12,634) based on reduced inflation rates, a transfer to support the Small Business Innovative Research (SBIR) program (-\$32,250), and other changes in program requirements which required minor reprogrammings (-\$2,789). Additionally, four transfers into the appropriation from a DoD central transfer account were effected to support the RDT&E Counter Drug program added funds (+\$30,265). Additionally, a rescission was effected in the FY 1997 DoD Appropriations Act (-\$4,500).

(\$ In Thousands)

Explanation of Changes in Financing
(\$ in Thousands)

The Fiscal Year 1997 program has changed since the presentation of the FY 1997 budget as noted below:

1. Program Requirements (Total). There has been a net increase to the appropriation (adjusted) of \$532,851, as a result of changes in program requirements as noted below.
2. Program Requirements (Service Account). There has been a net increase to the appropriation (adjusted) of \$521,020, resulting from changes in program requirements as a result of Congressional appropriation changes in the FY 1997 DoD Appropriations Act. These changes included a general undistributed RDT&E reduction of 2 percent (-\$164,179)(Section 8136), a general undistributed reduction of 2 percent (-\$164,179) to finance Defense Business Operating Fund (DBOF) operating shortfalls (Section 8120), an undistributed reduction for Federally Financed Research and Development Centers (FFRDC) (-\$3,822)(Section 8037(e)), an undistributed reduction for non-Federally Financed Research and Development Centers (non-FFRDC) (-\$13,299)(Section 8037(h)), a rescission to finance force protection requirements (-\$7,713)(Section 8138), and net changes to specific program changes (+\$874,212).

3. Program Requirements (Reimbursable). There has been a net increase to the appropriation of \$11,831, as a result of changes in reimbursable program requirements (\$11,831).

Comparison of FY 1997 Program Requirements as reflected
in the FY 1997 Budget with FY 1997 Program Requirements

Explanation by Budget Activity
(\$ in Thousands)

01. Basic Research (-\$35,067) - Changes to this budget activity resulted from the following Congressional undistributed reductions reflected in the FY 1997 DoD Appropriations Act. These changes included a general undistributed RDT&E reduction of 2 percent (-\$7,344)(Section 8136), a general undistributed reduction of 2 percent (-\$7,344) to finance Defense Business Operating Fund (DBOF) operating shortfalls (Section 8120), an undistributed reduction for Federally

Financed Research and Development Centers (FFRDC)(-\$34)(Section 8037(e)), a rescission to finance force protection requirements (-\$345)(Section 8138). Congress also specifically reduced the Defense Research Sciences program (-\$20,000).

02. Applied Research (+\$71,340) - Changes to this budget activity resulted from the following Congressional undistributed reductions reflected in the FY 1997 DoD Appropriations Act. These changes included a general undistributed RDT&E reduction of 2 percent (-\$11,155)(Section 8136), a general undistributed reduction of 2 percent (-\$11,155) to finance Defense Business Operating Fund (DBOF) operating shortfalls (Section 8120), an undistributed reduction for Federally Financed Research and Development Centers (FFRDC)(-\$214)(Section 8037(e)), an undistributed reduction for non-Federally Financed Research and Development Centers (non-FFRDC)(-\$212)(Section 8037(h)), a rescission to finance force protection requirements (-\$524)(Section 8138). Congress also specifically added funds to start or continue 26 specific initiatives (+\$94,600).

03. Advanced Technology Development (+\$51,791) - Changes to this budget activity resulted from the following Congressional undistributed reductions reflected in the FY 1997 DoD Appropriations Act. These changes included a general undistributed RDT&E reduction of 2 percent (-\$10,450)(Section 8136), a general undistributed reduction of 2 percent (-\$10,450) to finance Defense Business Operating Fund (DBOF) operating shortfalls (Section 8120), an undistributed reduction for Federally Financed Research and Development Centers (FFRDC)(-\$272)(Section 8037(e)), an undistributed reduction for non-Federally Financed Research and Development Centers (non-FFRDC)(-\$348)(Section 8037(h)), a rescission to finance force protection requirements (-\$491)(Section 8138). Congress also specifically added funds to start or continue 15 specific initiatives (+\$106,400), while reducing one program (-\$34,424). Additionally, changes in program requirements required minor reprogrammings (+\$1,826).

04. Demonstration and Validation (DEM/VAL) (+\$189,188) - Changes to this budget activity resulted from the following Congressional undistributed reductions reflected in the FY 1997 DoD Appropriations Act. These changes included a general undistributed RDT&E reduction of 2 percent (-\$40,282)(Section 8136), a general undistributed reduction of 2 percent (-\$40,282) to finance Defense Business Operating Fund (DBOF) operating shortfalls (Section 8120), an undistributed reduction for Federally Financed Research and Development Centers (FFRDC)(-\$859)(Section 8037(e)), an undistributed reduction for non-Federally Financed Research and Development Centers (non-FFRDC)(-\$1,546)(Section 8037(h)), a rescission to finance force protection requirements (-\$1,891)(Section 8138). Congress also specifically added funds to start or continue 20 specific initiatives (+\$270,551), while reducing three programs (-\$6,144).

Additionally, funds were increased in support of the Near Term Mine Warfare Plan (+\$6,285), as well as other changes in program requirements which required minor reprogrammings (+\$3,356).

05. Engineering and Manufacturing Development (EMD) (+\$95,212) - Changes to this budget activity resulted from the following Congressional undistributed reductions reflected in the FY 1997 DoD Appropriations Act. These changes included a general undistributed RDT&E reduction of 2 percent (-\$44,947)(Section 8136), a general undistributed reduction of 2 percent (-\$44,947) to finance Defense Business Operating Fund (DBOF) operating shortfalls (Section 8120), an undistributed reduction for Federally Financed Research and Development Centers (FFRDC)(-\$282)(Section 8037(e)), an undistributed reduction for non-Federally Financed Research and Development Centers (non-FFRDC) (-\$6,522)(Section 8037(h)), a rescission to finance force protection requirements (-\$2,116)(Section 8138). Congress also specifically added funds to start or continue 35 specific initiatives (+\$243,700), while realigning one program (-\$25,000) and reducing two programs (-\$11,700). Additionally, funds were decreased in support of the Near Term Mine Warfare Plan (-\$6,285), as well as other changes in program requirements which required minor reprogrammings (-\$6,689).

06. RDTE Management Support (-\$19,844) - Changes to this budget activity resulted from the following Congressional undistributed reductions reflected in the FY 1997 DoD Appropriations Act. These changes included a general undistributed RDT&E reduction of 2 percent (-\$11,274)(Section 8136), a general undistributed reduction of 2 percent (-\$11,274) to finance Defense Business Operating Fund (DBOF) operating shortfalls (Section 8120), an undistributed reduction for Federally Financed Research and Development Centers (FFRDC)(-\$1,956)(Section 8037(e)), an undistributed reduction for non-Federally Financed Research and Development Centers (non-FFRDC) (-\$1,111)(Section 8037(h)), a rescission to finance force protection requirements (-\$528)(Section 8138). Congress also specifically added funds to start or continue 3 specific initiatives (+\$4,500). Additionally, changes in program requirements required minor reprogrammings (+\$1,799).

07. Operational Systems Development (+\$168,400) - Changes to this budget activity resulted from the following Congressional undistributed reductions reflected in the FY 1997 DoD Appropriations Act. These changes included a general undistributed RDT&E reduction of 2 percent (-\$38,727)(Section 8136), a general undistributed reduction of 2 percent (-\$38,727) to finance Defense Business Operating Fund (DBOF) operating shortfalls (Section 8120), an undistributed reduction for Federally Financed Research and Development Centers (FFRDC)(-\$205)(Section 8037(e)), an undistributed reduction for non-Federally Financed Research and Development Centers (non-FFRDC)(-\$3,560)(Section 8037(h)), a rescission to finance force protection requirements (-\$1,817)(Section 8138). Congress also

specifically added funds to start or continue 19 specific initiatives (+\$257,929), while reducing two programs (-\$5,700). Additionally, changes in program requirements required minor reprogrammings (-\$793).

(U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: Increases capabilities of shipboard meteorology and oceanography support to tactically optimize weapon, sensor and platform performance in highly variable oceanic and atmospheric conditions. Projects in this program element develop atmospheric and oceanic data assimilation techniques, forecast models, data base management systems and associated software for use in both mainframe and tactical scale computers

afloat. Also developed are algorithms to process remotely sensed satellite data for integration into other systems and tactical applications. The projects also provide for advanced development of specialized oceanographic instrumentation and techniques to measure ocean parameters, new sensors, communications, interface and precise time technologies. Mapping, Charting and Geodesy efforts address the bathymetric and gravimetric needs of the Navy.

(U) JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under DEMONSTRATION & VALIDATION because it develops and integrates hardware for experimental test related to specific ship or aircraft applications.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: R0118, Ocean Measurement Sensors: The project develops highly specialized ultra-high resolution instrumentation systems and measurement techniques in support of CNO-endorsed requirements. The objectives of this project are to develop rapid meteorology and oceanography (METOC) data collection methods for littoral and hinterland regions to 1) provide an in-situ assessment capability for combatants, 2) to provide the regional commander with continuous METOC data for operational use, 3) develop baseline data for predictive models in areas of potential interest. Climatological forecasting does not work in the littoral. The major challenges include collection and dissemination of data in highly variable meteorological and oceanographic conditions under stressful METOC situations in denied or inaccessible areas over relatively long periods of time.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$1,000) Initiated development of METOC sensor packages for Remotely Operated Vehicle / Autonomous Unmanned Vehicles (ROV/AUVs) to support joint littoral operations.
- (U) (\$650) Continued miniature dropsonde package for Joint Navy/Army Unmanned Air Vehicle (UAV) and fleet aircraft project/integrate atmospheric E-O sensors.
- (U) (\$583) Initiated hinterland clandestine system and sensors for METOC monitoring for joint operations.
- (U) (\$289) Initiated Budget Activity (BA) 6.4 transition of expendable mooring system from BA 6.2 Ocean Sensors project.

- (U) (\$226) Transitioned miniature Acoustic Doppler Current Profiler (ADCP) development on Covert Littoral Acoustic Mapper (CLAM) to Naval Special Warfare Command.

2. (U) FY 1997 PLAN:

- (U) (\$638) Initiate Airborne Combat Data Collection (CDC) capability to support Battlespace METOC data acquisition via fleet assets.
- (U) (\$779) Continue sensors developments for ROV/AUV.
- (U) (\$580) Transition sensor integration and development of UAV sensors for joint littoral operations to Predator.
- (U) (\$465) Continue hinterland clandestine micro system for METOC monitoring for joint operations.
- (U) (\$389) Complete development of miniature ADCP for drifting buoys and bottom mount buoys.
- (U) (\$170) Continue A-sized expendable mooring development.
- (U) (\$60) Portion of extramural program reserved for Small Business Innovation Research assessment.

3. (U) FY 1998 PLAN:

- (U) (\$1,000) Continue Airborne Combat Data Collection via fleet assets.
- (U) (\$900) Continue sensor developments for ROV/AUV assume incremental vehicle size reductions requiring yearly sensor miniaturization.
- (U) (\$346) Complete sensor integration and development of UAV sensors in Pioneer Vehicle.
- (U) (\$600) Continue hinterland clandestine micro sensors.
- (U) (\$304) Complete A-sized self mooring clandestine buoy.

4. (U) FY 1999 PLAN:

- (U) (\$1,800) Continue Airborne Combat Data Collection via fleet assets.
- (U) (\$1,000) Continue sensor developments for ROV/AUV assume incremental vehicle size reductions requiring yearly sensor miniaturization.
- (U) (\$750) Initiate sensor integration and development of UAV sensors in Tier II Plus Vehicles.
- (U) (\$900) Complete hinterland clandestine micro sensors.
- (U) (\$447) Initiate development of small bottom crawling expendable littoral survey systems.

B. (U) PROGRAM CHANGE SUMMARY:

	FY 1996	FY 1997	FY 1998	FY 1999
(U) FY 1997 President's Budget:	2,848	3,212	3,215	4,942
(U) Adjustments from FY 1997 PRESBUDG:	-100	-131	-65	-45
(U) FY 1998/1999 President's Budget Submission:	2,748	3,081	3,150	4,897

(U) CHANGE SUMMARY EXPLANATION:

(U) Funding: FY 1996 funding decreased due to minor pricing adjustment (-18) and SBIR assessment (-82). FY 1997 funding decreased due to undistributed Congressional reductions (-131). FY 1998 funding decreased due to inflation (-8) and Navy Working Capital Fund (NWCf) and minor adjustments (-57). FY 1999 funding decreased due to inflation (-18) and NWCf and minor adjustments (-27).

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This project develops numerical oceanographic and atmospheric models for the Navy's Large Scale Computers at the Fleet Numerical Meteorology and Oceanography Center, Monterey, CA and the Naval Oceanographic Office, Stennis Space Center, MS. Other models under development in this project focus on sea ice, ocean thermal structure and ocean circulation prediction. In addition, the project develops expert systems/artificial intelligence applications which utilize the model output data to afford decision makers a better understanding of operational limitations imposed by the environment.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$462) Delivered next generation NOGAPS for operational use.
- (U) (\$173) Began development of advanced aerosol model.
- (U) (\$350) Completed development of and transition tactical scale nested atmospheric forecast model to large scale computer.
- (U) (\$484) Continued development of global coupled air-ocean-ice model.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This project provides for the advanced development of sensors, communication interfaces, and processing and display equipment to measure, ingest, store, distribute and display atmospheric and oceanographic parameters. Major emphasis areas include tactical workstations, data compression, connectivity, interface technology and the advanced development of new sensors such as active and passive atmospheric profilers for the Shipboard Meteorological and Oceanographic Observing System (SMOOS).

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$649) Completed data connectivity with the TAMPs, Tomahawk and other strike warfare systems. Continue development of data connectivity and interfaces with other C2 systems.
- (U) (\$300) Completed development and deliver Basis Image data compression technique. Continue development of additional data compression techniques.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This project develops systems and associated software to process and manage remotely-sensed environmental data at Oceanography Centers ashore and on board ships equipped with the AN/SMQ-11 satellite receiver/recorder. The project also supports code conversion, rehosting of software from other sources and modifications to the Tactical Environmental Support System - TESS(3) - Data Base Management System (DBMS).

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$203) Completed development of capability to ingest data from Special Microwave Imagers and Synthetic Aperture Radars. Begin development of capabilities to ingest data from other new satellite sensors such as Ocean Color and Vertical Sounders.
- (U) (\$270) Completed modifications to TESS(3) DBMS to accommodate increased capabilities afforded with new hardware and systems software.
- (U) (\$150) Continued exploitation of new relational data base management technologies for large scale computers and TESS(3).
- (U) (\$140) Began development of object-oriented DBMS.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This project upgrades the accuracy of the U.S. Naval Observatory's Master Clock System (MCS) for DOD surface, subsurface, air and shore communications, navigation and time dissemination systems. It also develops near-real-time Earth orientation predictions through use of satellite or fiber optics transmission of Very Long Baseline Interferometer (VLBI) data for DOD navigation and positioning systems. It also develops advanced electronic light detectors and interferometry in the optical and infrared wavelength regions for very precise determination of positions of both faint and bright star, satellite tracking, and space debris studies.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$154) Demonstrated optimum clock stability and precision at the nanosecond level from application of more accurate environmental stability and clock model algorithms.
- (U) (\$150) Completed evaluation of stored ion clock physics package.
- (U) (\$347) Demonstrated the capability of optical interferometry for precise positions.
- (U) (\$390) Initiated demonstration of large scale CCD arrays for electronic astrophotography.
- (U) (\$200) Continued development of infrared capability for optical interferometer.

2. (U) FY 1997 PLAN:

- (U) (\$100) Evaluate time transfer capabilities via fiber optic network.
- (U) (\$150) Demonstrate capabilities of the Global Positioning System (GPS) for UTI/Polar Motion determination.
- (U) (\$400) Complete demonstration of prototype optical interferometer for astrometry.
- (U) (\$287) Complete demonstration of large scale CCD arrays for electronic astrophotography.
- (U) (\$250) Complete development of infrared capability for optical interferometer.

3. (U) FY 1998 PLAN:

- (U) (\$122) Continue evaluation of time transfer capabilities via fiber optic network.
- (U) (\$150) Complete demonstration of GPS for UTI/Polar Motion.
- (U) (\$350) Begin Universal Time demonstration.
- (U) (\$450) Begin real time VLBI demonstrations.
- (U) (\$170) Begin 2 micron measurement capability demonstration.

4. (U) FY 1999 PLAN:

- (U) (\$145) Complete evaluation of time transfer capabilities via fiber optic network.
- (U) (\$425) Continue Universal Time demonstration.
- (U) (\$450) Continue real time VLBI demonstrations.
- (U) (\$225) Complete 2 micron measurement capability demonstration.
- (U) (\$246) Begin Northern Hemisphere EO/IR sky survey.

X1596 Satellite Ocean Tactical Application	3,780	3,700	3,504	4,257	4,139	4,360	4,443	4,506	CONT.	CONT.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This project develops concepts and software techniques for the integration and tactical application of significant oceanographic and atmospheric data derived from satelliteborne sensors. Included are techniques and algorithms for the processing of sensor measurements, conversion of raw signal data to geophysical information, analysis schemes encompassing Artificial Intelligence and Expert Systems, and other satellite data applications and field validation of end products. The software developed under this project is planned for use in Mainframe computers and in the Tactical Environmental Support System - TESS(3).

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$1,418) Completed transition of a cloud pattern recognition expert system. Continue development of additional expert systems for satellite oceanographic and atmospheric feature analyses.
- (U) (\$1,692) Continued transition of ocean color sensor and scatterometer data operational capability. Continue development of new algorithms for SAR, altimeters, ocean color sensors and scatterometers.
- (U) (\$370) Began development of advanced littoral zone analysis software.
- (U) (\$300) Continued fleet exercise participation for validation of algorithms.

2. (U) FY 1997 PLAN:

- (U) (\$36) Portion of extramural program reserved for Small Business Innovation Research assessment in accordance with 15 U.S.C.638.
- (U) (\$1,422) Complete Expert System for atmospheric fronts and cumulus cloud analysis. Continue development of additional expert systems for satellite oceanographic and atmospheric feature analyses.
- (U) (\$1,402) Continue transition of ocean color sensor and scatterometer data operational capability. Continue development of new algorithms for SAR, Altimeters, Ocean Color sensors and scatterometers.
- (U) (\$375) Continue development of advanced littoral zone analysis software.
- (U) (\$165) Begin airborne vs. satellite validation of SAR ocean feature analysis.
- (U) (\$300) Continue fleet exercise participation for validation of algorithms.

3. (U) FY 1998 PLAN:

- (U) (\$1,088) Complete development of expert systems for satellite oceanographic and atmospheric feature analysis.
- (U) (\$307) Begin development of SSM/IS atmospheric algorithms.
- (U) (\$1,384) Complete transition of Ocean Color sensor and scatterometer data operational capability. Complete development and begin transition of new algorithms for SAR and altimetry data. Continue development and transition of new algorithms for Ocean Color sensors and scatterometers.
- (U) (\$175) Begin evaluation of aviation impact variables satellite product.
- (U) (\$225) Complete airborne vs. satellite validation of SAR ocean feature analysis.
- (U) (\$325) Continue fleet exercise participation for validation of algorithms.

4. (U) FY 1999 PLAN:

- (U) (\$411) Complete development of SSM/IS atmospheric algorithms.
- (U) (\$1,337) Complete transition of new algorithms for SAR and altimetry data. Complete development and transition of new algorithms for Ocean Color sensors and scatterometers.
- (U) (\$250) Continue evaluation of aviation impact variables satellite product.
- (U) (\$725) Begin development of automated objective processing in the littoral.
- (U) (\$594) Begin development of techniques for bathymetry and surf zone
- (U) (\$590) Begin development of high resolution micro-topography algorithms.
- (U) (\$350) Continue fleet exercise participation for validation of algorithms.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: R1987, Mapping, Charting & Geodesy (MC&G) Techniques: This project develops new charting and bathymetric survey techniques necessary to reduce the existing 300 ship year shortfall in coastal hydrographic survey requirements. Presently 70% of the world's coastline is not adequately charted. The requirements are originated by Fleet Commander in Chief's (CINCS) and the Commandant of the Marine Corps, and validated by the Defense Mapping Agency in support of littoral and expeditionary operations.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$1,167) Continued development of Airborne Laser capability, implemented tidal correction algorithm and initiated 3D Global Planning System (GPS) integration. Hardened P3 panner to stand alone. Began software conversion for tactical application. Transitioned technology from DOD International Program to U.S. Navy use.
- (U) (\$669) Continued information management and Digital Mapping, Charting & Geodesy Support Program (DMAP) functions in conjunction with Defense Mapping Agency (DMA) requirements.

PROJECT NUMBER: R1987

PROGRAM ELEMENT TITLE: Air/Ocean Tactical Applications PROJECT TITLE: Mapping, Charting & Geodesy Techniques

- (U) (\$1,600) Initiated design and construction of dual mission Remote Minehunting System (RMS) Operational Prototype Oceanographic Remotely Controlled Automation/Remote-Mine hunting Operational Prototype (ORCA/RMOP) vehicle for joint bathymetric and mine hunting in conjunction with Naval Sea Systems Command (NAVSEA) PMS407 (Mine Countermeasures Program Office) and Naval Coastal Systems Center.
 - (U) (\$1,600) Continued Test and Evaluation of sensors for ORCA Remotely Operated Vehicle / Autonomous Unmanned Vehicle (ROV/AUV), add expendable sensors, automate vehicle controls, installed real time map generation, and integrate meteorology and oceanography (METOC) sensors from 6.3 Ocean Measurement Sensor (OMS) program.
2. (U) FY 1997 PLAN:
- (U) (\$2,000) Complete development/acquisition of oceanographic/bathymetric (NAVSEA PMS 407/CNO(N096) dual mission RMS.
 - (U) (\$475) Transition ORCA demonstration and evaluations, complete automated vehicle controls, continue map generation project, and integration of OMS transitioned sensors.
 - (U) (\$200) Begin critical design reviews and instrumentation design for joint RMS vehicle in conjunction with Naval Coastal System Center (purchase in FY 1996 delivery in FY 1998).
 - (U) (\$715) Airborne Laser project, complete tide algorithm, continue multispectral scanner, and add interferometric GPS (3D position) capability.
 - (U) (\$519) Continue information management and continue DMAP functions. DMAP is the clearing house for reviewing Digital Mapping, Charting and Geodesy requirements.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This project develops new techniques for environmental data assimilation, for both conventional and satellite remotely sensed data, and includes the development of tactical models to utilize these data. Artificial Intelligence, Expert and Rule-Based systems are emphasized. The goal is to provide the Navy with a real-time, stand-alone, shipboard tactical scale atmospheric and oceanographic forecasting capability in accordance with the Pre-Planned Product Improvement (P3I) plan for the Tactical Environmental Support System - TESS(3).

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$721) Completed incorporation of Expert Systems applications in the EM model. Continue to incorporate Expert Systems' applications in the EO and VLSTrack models.

- (U) (\$1,048) Continued development of coastal and enclosed basin tactical scale oceanographic models for the Sea of Okhotsk, Sea of Japan and other selected geographical locations, such as the Persian Gulf, Gulf of Oman and the Arabian Sea in response to requirements.
 - (U) (\$290) Continued incorporation of expert system/artificial intelligence techniques in the 4D assimilation of tactical scale data.
2. (U) FY 1997 PLAN:
- (U) (\$8) Portion of extramural program reserved for Small Business Innovation Research assessment in accordance with 15 U.S.C.638.
 - (U) (\$605) Complete incorporation of Expert Systems' applications in the EO and VLSTrack area.
 - (U) (\$235) Begin development of surface-to-air and surface-to-surface EO model.
 - (U) (\$844) Complete development of the Arabian Sea model. Continue development of coastal and enclosed basin tactical scale oceanographic models for the Sea of Okhotsk, Sea of Japan and other selected geographical locations such as the Persian Gulf and the Gulf of Oman in response to requirements.
 - (U) (\$290) Complete incorporation of expert system/artificial intelligence techniques in the 4D assimilation of tactical scale data.

3. (U) FY 1998 PLAN:

- (U) (\$350) Continue development of surface to air and surface to surface EO model.
- (U) (\$981) Continue development of coastal and enclosed basin tactical scale oceanographic models for selected geographical locations in response to emergent requirements.
- (U) (\$361) Begin development of shipboard shallow water ocean circulation model.
- (U) (\$225) Begin development of automated graphical applications for tactical data visualization.

Note: The JPATS program transfers to Budget Activity 5 in FY98 and out.

(U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:

(U) The T45TS mission is to provide undergraduate jet pilot training for prospective carrier-based Navy and Marine Corps pilots, and selected international students, to meet aircrew requirements through 1990's and beyond. T45TS is a total training system concept which includes aircraft, simulators, academics and contractor logistics support. Planned RDT&E efforts include evaluation of the Cockpit-21 digital display upgrade and continued flight envelope expansion.

(U) The Joint Primary Aircraft Training System (JPATS) is an ACAT 1C, non-developmental item (NDI), commercial off-the-shelf (COTS) pilot program initiated to provide a high degree of commonality between the flight training programs of the United States Navy (USN) and United States Air Force (USAF). The JPATS is to replace the T-34 and T-37 for the USN and USAF, respectively. JPATS shall employ a common primary training system consisting of aircraft, aircrew training devices (simulators, computer-aided instruction terminals, etc.), syllabus, courseware, and logistics support. The JPATS mission will be to train entry-level USN/USAF student pilots and navigators. The U.S. Air Force is the executive service. This element funds Navy participation in the joint program and Navy unique requirements.

(U) JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under DEMONSTRATION & VALIDATION because it develops and integrates hardware for experimental test related to specific ship or aircraft applications.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: The T45TS mission is to provide undergraduate jet pilot training for prospective carrier-based Navy and Marine Corps pilot, and selected international students, to meet aircrew requirements in the 1990's and beyond. T45TS is a total training system concept which includes aircraft, simulators, academics and contractor logistics support. Planned RDT&E efforts include evaluation of the Cockpit-21 digital display upgrade and continued flight envelope expansion.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$0) Obtained Operational Test and Evaluation Force recommendation for incorporation of CP-21.
- (U) (\$830) Completed technical reviews and analysis to support Operational Assessment of CP21.
- (U) (\$238) Supported and conducted tests to expand the aircraft operating envelope (increase cruise maneuverability and expanded stores carriage and release).
- (U) (\$180) Conducted study to define the design and integration of stand alone Global Positioning System (GPS) Inertial Navigation Assembly to meet congressionally mandated incorporation of GPS.

2. (U) FY 1997 PLAN:

- (U) (\$423) Complete tests to expand the aircraft operating envelope (increase cruise maneuverability and expanded stores carriage and release).
- (U) (\$12) Portion of program reserved for Small Business Innovation Research assessment in accordance with 15 U.S.C. 638.

Note: The JPATS program transfers to Budget Activity 5 in FY98 and out.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: The Joint Primary Aircraft Training System (JPATS) is an ACAT 1C, non-developmental item (NDI), commercial off-the-shelf (COTS) pilot program initiated to provide a high degree of commonality between the flight training programs of the United States Navy (USN) and United States Air Force (USAF). The JPATS is to replace the T-34 and T-37 for the USN and USAF, respectively. JPATS shall employ a common primary training system, consisting of aircraft, aircrew training devices (simulators, computer-aided instruction terminals, etc.), syllabus, courseware, and logistics support. The JPATS mission will be to train entry-level USN/USAF student pilots and navigators. The U.S. Air Force is the executive service. This element funds Navy participation in the joint program and Navy unique requirements.

(U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: Aviation Survivability addresses the issues of aircrew and platform survivability, focusing on enhancing overall opportunity for aircrew and platform protection and enhanced performance. The capabilities addressed under this program element counter emerging threats of next generation operational weapons systems and enhance combat effectiveness in future operational mission scenarios.

(U) Two of the projects address aircrew requirements. Aircrew Impact Injury Prevention develops human dynamic and injury response models to impact acceleration and determines the correlation of these dynamic responses with physiological effects and injuries. Aircrew Protective Clothing and Devices develops, demonstrates and validates technology options that enhance aircrew capability to perform assigned missions. In addition, this project ensures aircrew protection against natural and induced environmental or physiological hazards encountered during routine, combat and emergency flight operations as well as during escape, survival and rescue, following loss of aircraft.

RD&E,N BUDGET ITEM JUSTIFICATION SHEET

BUDGET ACTIVITY: 4

PROGRAM ELEMENT: 0603216N

PROGRAM ELEMENT TITLE: Aviation Survivability

(U) The three remaining projects focus on platform survivability, addressing the reductions in aircraft susceptibility to enemy and non-combat threats, as well as aircraft vulnerabilities to conventional, nuclear, chemical, biological, radiological and directed energy weapons. The Aircraft Survivability, Vulnerability and Safety project expands the survivability technology base and develops prototype hardware which is required to improve the survivability of Naval aircraft. Aircraft and Ordnance Safety transitions generic insensitive munitions technology to Navy and Marine Corps air weapons, ensuring that they are insensitive to fast cook-off, slow cook-off, bullet and fragment impact and sympathetic detonation. Carrier Aircraft Fire Suppression Systems develop improved firefighting systems and fire protective measures for aircraft carriers.

(U) JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under DEMONSTRATION and VALIDATION because it develops and integrates hardware for experimental tests related to specific ship or aircraft applications.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This project develops, demonstrates, and validates technology options for functionally integrated aircrew emergency and life support systems designed to enhance mission effectiveness, in-flight protection and survivability. The project covers fixed and rotary wing life support and advanced helmet vision systems, and includes escape systems technology, crew centered cockpit design, and cockpit integration programs. It responds to a number of operational requirements documents, including OR# 210-05-88 for Chemical and Biological (CB) Protection, OR# 099-05-087 for Laser Eye Protection, and the Joint Air Force/Navy (CAF 208-93) for an Aerospace Control Helmet Mounted Cueing System. In 1996, the various sub-projects were restructured into a combined Advanced Technology Escape System (ATES) and Advanced Integrated Life Support System (AILSS) program. This project is validated by two Non-Acquisition Program Development Documents (NAPPDs), one for an Advanced Technology Crew Station (ATCS), and the other for AILSS.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$2,121) Continued development of environmental and combat protection components of the SMART AILSS and Air Warrior (AW) system.
- (U) (\$882) Designed and continued development of day targeting CRUSADER Advanced Helment Vision System (AHVS).
- (U) (\$795) Continued integration and evaluation of contractor ATCS designs in Dynamic Flight Simulator (DFS).
- (U) (\$2,625) Continued development of controllable propulsion systems for ejection seats in USN/USMC aircraft. (Fourth Generation Escape Technology Demonstration Program).
- (U) (\$1,575) Initiated Full Crew Accommodation (FCA) Technology Upgrade PI programs leading to development and demonstration of an advanced technology escape system.

(U) Appropriated Value		11,542		
(U) Adjustments from FY 1997 PRESBUDG:	-173	8,717	-82	-49
(U) FY 1998/99 PRESBUDG Submit:	8,663	11,059	3,256	4,301

(U) CHANGE SUMMARY EXPLANATION:

(U) Funding: FY 1996 decrease reflects \$10 thousand for the F-16 Jordanian Rescission and \$168 thousand for the Small Business Innovation Research assessment offset by an increase of \$5 thousand for minor pricing adjustments. FY 1997 net increase reflects \$9,200 thousand for a Congressional plus up in support of AILSS/ATES/ATCS. This increase is partially offset by a decrease of \$483 thousand for Congressional undistributed reductions. FY 1998 reflects a decrease of \$62 thousand for Navy Working Capital Fund (NWCf)carryover and rate adjustments and a reduction of \$20 thousand for minor pricing adjustments. FY 1999 reflects a decrease of \$29 thousand for minor pricing adjustments and \$20 thousand for NWCf rate adjustments.

(U) Schedule: Congressional increase accelerated HAILSS/AILSS, AHVS and ATCS technologies. The increase also funded a one year effort to develop 3D visualization architectures.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: Aircraft Survivability, Vulnerability and Safety. This project develops prototype hardware to improve the survivability of Navy and Marine Corps aircraft. This project addresses the likelihood of an aircraft being hit (susceptibility) and the probability of a kill if the aircraft is hit (vulnerability). Types of programs funded under this project include signature reduction efforts, subsystem and component hardening and development of fire and explosion suppression techniques for fuel systems. Beginning in fiscal year 1996 Chemical and Biological efforts were consolidated under OSD program element 0603384D (Chemical and Biological Defense (Advanced Development)).

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

(U) (\$787) Completed development of the AH-1W Survivability Enhancement Program, including effectiveness testing.

(U) (\$750) Initiated prototype vulnerability and susceptibility reduction design for aircraft, including power modulation and Infrared (IR) signature suppression.

(U) (\$241) Completed survivability RDT&E master plan.

(U) (\$394) Continued the development of the Aircraft Survivability Database.

(U) (\$229) Continued the development of Survivability Analysis Methodology, including methodology to support the Live Fire Test Law.

(U) (\$ 22) Portion of program served for Small Business Innovation Research assessment in accordance with 15 U.S.C. 638.
3. (U) FY 1998 PLAN:
(U) (\$1,643) Continue the development of prototype survivability reduction design for aircraft, including IR signature suppression.
(U) (\$200) Continue the development of RDT&E master plan update.
(U) (\$140) Continue the development of Aircraft Survivability Database.
(U) (\$200) Continue the development of Survivability Analysis Methodology.
4. (U) FY 1999 PLAN:
(U) (\$2,341) Continue the development of prototype survivability reduction design for aircraft, including IR signature suppression.
(U) (\$200) Continue the development of RDT&E master plan update.
(U) (\$120) Continue the development of Aircraft Survivability Database.
(U) (\$200) Continue the development of Survivability Analysis Methodology.

B. (U) PROGRAM CHANGE SUMMARY:

	<u>FY 1996</u>	<u>FY 1997</u>	<u>FY 1998</u>	<u>FY 1999</u>
(U) FY 1997 President's Budget:	2,428	1,801	2,233	2,895
(U) Appropriated Value		1,801		
(U) Adjustments from FY 1997 PRESBUDG:	-27	-74	-50	-34
(U) FY 1998 PRESBUDG Submit:	2,401	1,727	2,183	2,861

(U) CHANGE SUMMARY EXPLANATION:

(U) Funding: The FY 1996 decrease reflects \$2 thousand for the F-16 Jordanian Rescission, \$4 thousand for the Small Business Innovation Research assessment and \$21 thousand for minor pricing adjustments. The FY 1997 decrease reflects \$74 thousand for Congressional undistributed reductions. The FY 1998 decrease reflects \$36 thousand for Navy Working Capital Fund (NWCf) carryover and rate adjustments, and \$14 thousand for minor pricing adjustments. The FY 1999 decrease reflects \$14 thousand for NWCf rate adjustments and \$20 thousand for minor pricing adjustments.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This project transitions Insensitive Munitions (IM) technology from IM Advanced Development (generic technology) to Air Weapon Systems to comply with Chief of Naval Operations direction that all munitions carried aboard Navy ships be insensitive to fast cook-off (FCO), slow cook-off (SCO), bullet and fragment impact (BI and FI), and sympathetic detonation (SD).

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$131) Conducted SCO studies of Air-to-Air Missile (AMRAAM) rocket motor.
- (U) (\$227) Conducted demonstration of 2.75 inch rocket motor IM technology.
- (U) (\$105) Completed outgassing liner technology for Stand-off Land Attack Missile (SLAM) Hard Target Penetrating (HTP) warhead.
- (U) (\$ 61) Conducted IM risk reduction effort for Tomahawk HTP warhead.
- (U) (\$542) Conducted IM evaluation of Sidewinder rocket motor.
- (U) (\$ 45) Assessed weapons systems IM technology transition plans.

2. (U) FY 1997 PLAN:

- (U) (\$120) Complete SCO studies of AMRAAM rocket motor.
- (U) (\$388) Demonstrate IM propellant and composite rocket motor case technologies for High Performance Air-to-Air Missile (HPAAM).
- (U) (\$310) Investigate IM technologies for the 2.75-inch rocket motor for HYDRA XXI and demonstrate the lowest risk technology.
- (U) (\$1) Portion of program reserved for Small Business Innovation Research assessment in accordance with 15 U.S.C. 638.

(U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:

(U) The mission of Project BEARTRAP (CNO Special Project K-416) is to provide both an airborne Maritime [classified material deleted] data collection capability and an associated high technology, rapid development project for the application of state-of-the-art collection sensors. The project is to be responsive to the need to improve Undersea Warfare systems by effectively collecting information on the newer generation diesel/electric, new construction nuclear, and all types of submarines operating in shallow and/or harsh water environments, as well as combatant and non-combatant surface ships. The program will develop and rapidly deploy new technology concepts in hardware and software to address the emerging littoral threat and improve Undersea Warfare capability in support of Joint Strike and Surveillance operations. The data collection program is to provide [classified material deleted] passive and active acoustic and non-acoustic data essential for the design of Undersea Warfare sensors, weapons, signal processing systems, and software development. BEARTRAP uses developmental and prototype hardware and software installed in specifically configured ASW aircraft to collect [classified material deleted] data, and special ground facilities to conduct post mission analysis of this data. This Project (H0490) includes [classified material deleted] data recording systems, advanced detection and tracking systems, special sensors, advanced signal processing techniques, and special operational techniques. New acoustic and non-acoustic devices and signal processing techniques developed under the Advanced Collection Technology project (H2089) are transitioned to Project BEARTRAP for evaluation and data collection.

UNCLASSIFIED

FY 1997 RDT&E,N BUDGET ITEM JUSTIFICATION SHEET

DATE: February 1997

BUDGET ACTIVITY: 4

PROGRAM ELEMENT: 0603254N

PROGRAM ELEMENT TITLE: Anti-Submarine Warfare Systems Development

(U) Primary programs being funded during the period identified are the Shallow Water ASW Localization and Attack System (SWALAS), which is a potential replacement for the Directional Command Active Sonobuoy System in harsh water; the Air Deployed Low Frequency Projector (ADLFP) non-acquisition program which will demonstrate low frequency acoustic projector technology; the development of enhancement for Extended Echo Ranging (EER) software for P-3C platforms; the Advanced Ranging Source (ARS) non-acquisition program demonstration of potential enhancements for EER source technology, and the Advanced Multistatic Signal Processing (AMSP) non-acquisition program demonstration of processing concepts to enhance [classified material deleted]. These improvements will increase capabilities in continental shelf and bottom-limited environments typical of regional conflict scenarios.

(U) The Advanced ASW Sensors and Processors project provides improved air ASW warfare platform effectiveness through development of advanced hardware and software associated with airborne acoustic systems. This includes sensors, processing, post-processing, data recording and display capabilities to address regional threat scenarios, against conventionally powered submarines, represented by the German Type 209, and Soviet developed quiet nuclear submarines, represented by the AKULA.

(U) The Advanced ASW Target project develops the next generation fleet Anti-Submarine Warfare (ASW) training target. The MK 30 Mod 2 replaces the aging MK 30 Mod 1 ASW Target providing increased target reliability and availability to the Fleet and updates the target's electro-acoustic capabilities.

(U) JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under DEMONSTRATION & VALIDATION because it develops and integrates hardware for experimental tests related to specific ship or aircraft application.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION The mission of Project BEARTRAP (CNO Special Project K-416) is to provide both an airborne Maritime [classified material deleted] data collection capability and an associated high technology, rapid development project for the application of state-of-the-art collection sensors. The project is to be responsive to the need to improve Undersea Warfare systems by effectively collecting information on the newer generation diesel/electric, new construction nuclear, and all types of submarines operating in shallow and/or harsh water environments, as well as combatant and non-combatant surface ships. The program will develop and rapidly deploy new technology concepts in hardware and software to address the emerging littoral threat and improve Undersea Warfare capability in support of Joint Strike and Surveillance operations. The data collection program is to provide calibrated passive and active acoustic and non-acoustic data useful in the analysis and design of Undersea Warfare sensors, weapons, signal processing systems, and software development. BEARTRAP uses developmental and prototype hardware and software installed in specifically configured ASW aircrafts to collect [classified material deleted] data, and special ground facilities to conduct post mission analysis of this data. This Project (H0490) includes calibrated data recording systems, advanced detection and tracking systems, special sensors, advanced signal processing techniques, and special operational techniques. New acoustic and non-acoustic devices and signal processing techniques developed under the Advanced Collection Technology project, (PE 0603747N (H2089)) are transitioned to Project BEARTRAP for evaluation and data collection.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$1,008) Continued signal processing developmental efforts to include acoustics transients, active and passive acoustics and non-acoustics.
- (U) (\$ 901) Continued hardware and software developmental efforts to equip BEARTRAP aircraft with advanced acoustic and non-acoustic sensor capabilities.

(U) FY 1998/99 Presidents Budget Submit:	6,176	6,014	6,358	8,453

(U) CHANGE SUMMARY EXPLANATION:

(U) Funding: FY96 reduction consists of \$23 thousand for the F-16 Jordanian rescission and \$19 thousand for the SBIR assessment. FY97 reduction consists of \$275 thousand for Congressional undistributed reductions. FY98 reflects reductions of \$600 thousand for the P-3C sensor integration; \$206 thousand for Navy Working Capital Fund (NWCf) adjustments, \$52 thousand for Base Realignment and Closure (BRAC) savings, and \$36 thousand for minor pricing adjustments. The FY99 decrease of \$529 thousand reflects reductions of \$10 thousand due to minor pricing adjustments and \$39 thousand for NWCf adjustments and \$480 thousand for BRAC savings.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This program provides air Anti-submarine Warfare (ASW) platform effectiveness through development of advanced hardware and software associated with airborne acoustic systems. This includes sensors, processing, post-processing, data recording and display capabilities to address regional threat scenarios against conventionally powered submarines, represented by the German Type 209, Commonwealth of Independent States (CIS) export Kilo, and Soviet developed quiet nuclear submarines, represented by the AKULA. Key objectives are platform accommodations of advanced active and passive sensors, improved detection, classification, localization, tracking and increased capacity and flexibility to handle multi-sensor data loads. Primary programs being funded during the period identified are the Shallow Water ASW Localization and Attack System (SWALAS), which is a potential replacement for the Directional Command Active Sonobuoy System in harsh water, the Air Deployed Low Frequency Projector (ADLFP) non-acquisition program which will demonstrate low frequency acoustic projector technology, the development of enhancement for Extended Echo Ranging (EER) software for P-3C platforms and the Advanced Multi-Static Signal Processing (AMSP) project that will demonstrate potential risk reduction technologies for the Extended Echo Ranging (EER) program which complements the ADLFP and ARS previously approved NAPDD projects. A future NAPDD effort planned for this program is the In-Buoy Signal Processing (IBSP) project that will demonstrate in-buoy processing approaches to better utilize sonobuoy to aircraft uplink bandwidth, and reduce in-aircraft acoustic processing requirements.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

SWALAS

- (U) (\$ 500) Awarded systems analysis contracts and completed Milestone I.
- (U) (\$ 373) Provided engineering analysis of SWALAS critical components.
- (U) (\$ 640) Provided other engineering support and contract services.

PROGRAM ELEMENT: 0603254N

PROJECT NUMBER: H1292

PROGRAM ELEMENT TITLE: ASW Systems Development PROJECT TITLE: Adv ASW Sensors & Processors

ADLFP

- (U) (\$1,500) Completed fabrication of Demonstration Model subsystems and initiate model integration.
- (U) (\$ 631) Provided engineering support to demonstration model fabrication and integration.
- (U) (\$ 664) Conducted data collection during scheduled sea tests and completed data analysis.
- (U) (\$ 395) Provided other engineering support and contract services.

ARS

- (U) (\$ 540) Completed design and initial safety evaluation of electronic safe and arming device.
- (U) (\$ 906) Completed engineering design of ARS demonstration models.
- (U) (\$ 355) Conducted data collection during scheduled sea tests and completed data analysis.
- (U) (\$ 650) Completed engineering design of small size mechanical safe and arm device.
- (U) (\$ 858) Provided other engineering support and contract services.

AMSP

- (U) (\$1,652) Conducted baseline bistatic processing performance capability data collection and analysis.
- (U) (\$ 481) Conducted new bistatic processing algorithm definition development.
- (U) (\$ 587) Provided other engineering support and contract services.

2. (U) FY 1997 PLAN:

- (U) (\$ 30) Portion of program reserved for Small Business Innovation Research assessment in accordance with 15 U.S.C. 638.

SWALAS

- (U) (\$1,150) Award Advanced Development Model (ADM) contracts.
- (U) (\$ 550) Provided engineering support to ADM contractor and conduct critical component tests.
- (U) (\$ 596) Provided other engineering support and contract services.

ADLFP/ARS

- (U) (\$1,332) Complete ADLFP and ARS demonstrations and cost/performance evaluations to determine technology to transition to Advanced Extended Echo Ranging (AEER) source development.
- (U) (\$2,600) Complete ADLFP and ARS component development.
- (U) (\$ 649) Provided other engineering support and contract services.

AMSP

- (U) (\$ 398) Complete bistatic algorithm definition and provide other engineering support and contract services.

3. (U) FY 1998 PLAN:

SWALAS

- (U) (\$1,520) Complete ADM design review and subassembly tests.
- (U) (\$ 692) Provided engineering support to ADM contractor and conduct critical component tests.
- (U) (\$1,191) Provided other engineering support and contract services.

B. (U) PROGRAM CHANGE SUMMARY:

(U) FY 1997 President's Budget:	FY 1996 10,852	FY 1997 5,168	FY 1998 7,264	FY 1999 10,669
(U) Adjustments from Pres Budget:	-120	+2,137	-3,861	-5,655
(U) FY 1998/99 President's Budget Submit:	10,732	7,305	3,403	5,014

(U) CHANGE SUMMARY EXPLANATION:

(U) Funding: The FY 1996 net reduction of \$-120 thousand includes a reduction of \$-35 thousand for the Jordanian Rescission and \$-18 thousand for SBIR transfer and minor program adjustments of \$-67 thousand. The FY 1997 net increase of \$+2,137 thousand includes a Congressional increase of \$+2,500 thousand to complete ADLFP NAPDD and \$-363 thousand for Navy Working Capital Fund (NWCf) and minor program adjustments. FY 1998 net reduction of \$-3,861 thousand includes a transfer of \$-1,489 thousand to fund Air Deployed Active Receiver (ADAR) (0604261N,H2000), \$-2,200 thousand for other sponsor priorities, \$-172 thousand for NWCf and minor pricing adjustments. The FY 1999 net reduction of \$-5,655 thousand includes \$-1,000 for ADAR, \$-4,647 thousand reduction as a result of resource sponsor reprioritization of requirements, and a \$-8 thousand for NWCf and minor pricing adjustments.

(U) Schedule: SWALAS MS-I delayed from 3Q/96 to 4Q/96 for review and approval of milestone documentation. DT-I is delayed from 1Q/99 to 4Q/00 and Milestone II from 1Q/00 to 4Q/01 due to outyear funding reductions. SWALAS Design Review added 1Q/98 and acceptance test added 4Q/99 as additional program metrics since outyear funding reductions have stretched program by two years. ADLFP/ARS Demo delayed from 2Q/97 to 4Q/97 to evaluate additional projector hardware alternatives. IBSP NAPDD delayed 4Q/99 to 4Q/01, Design Review 4Q/01 to 3Q/02 and Demo Award 2Q/01 to 2Q/02 due to outyear funding reductions. A reprioritization of efforts has caused the AAR Milestones in 4Q/98 and 1Q/99 to be delayed indefinitely.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This project develops the next generation fleet Anti-Submarine Warfare (ASW) Training target. The mission of the MK 30 Mod 2 ASW Training Target System is to provide cost-effective ASW training for Navy platforms (surface ships, submarines, and aircraft) by using a highly reliable and maintainable unmanned undersea vehicle to simulate the dynamics, acoustics, and magnetic signatures of submarines and act as a target for the ASW sensors and torpedoes to detect, classify, track, and pursue in a realistic, operational training environment.

(U) The target will be capable of simulating the Russian and Rest of the World (ROW) submarine threats anticipated in the twenty-first century littoral warfare environment with the degree of simulation fidelity required for effective ASW training, especially simulation of the shallow water, slower speed and conventionally powered submarine.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- . (U) (\$5,059) Completed D&V phase development contract, including MK 30 Mod 2 D&V prototype fabrication; complete risk mitigation and contractor testing, culminating with in-water static acoustic test.
- . (U) (\$2,384) Continued program and technical management of MK 30 Mod 2 development. Prepared documentation for Program (Milestone) Review. Conducted Program Review in June.
- . (U) (\$871) Continued GFE battery development.
- . (U) (\$139) Travel and technical trade studies.
- . (U) (\$3,492) Awarded E&MD phase development contract.

2. (U) FY 1997 PLAN:

- (U) (\$4,892) Continue E&MD phase development contract. Conduct System Transition Review. Continue MK 30 Mod 2 Advanced Development Model (ADM) engineering and integration. Hold Provisioning Conference to review Logistic Support Analysis (LSA) data.
- (U) (\$1,391) Continue program and technical management of MK 30 Mod 2 development.
- (U) (\$525) Continue GFE (battery) development program at Government facility.
- (U) (\$590) Test and Evaluation (DT-II). Continue integration and system testing of the prototype components and subsystems.
- (U) (\$148) Portion of extramural program reserved for Small Business Innovation Research assessment in accordance with 15 USC 638.
- (U) (\$63) Travel and other miscellaneous expenses.

3. (U) FY 1998 PLAN:

- (U) (\$9,908) Continue E&MD phase development contract. Conduct subsystem and system Critical Design Reviews (CDR). Initiate manufacture of EDM hardware and support & test equipment. Continue system level testing with ADM hardware.
- (U) (\$1,450) Continue program and technical management of MK 30 Mod 2 development.
- (U) (\$800) Continue GFE battery development program.
- (U) (\$850) Test and Evaluation (DT-II). Continue system testing of Advanced Development Model to verify support system performance.
- (U) (\$100) Travel and other miscellaneous expenses.

(U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: The Tactical Airborne Reconnaissance Program develops systems to provide timely and accurate imagery intelligence. Present systems provide such imagery from manned platforms using film based sensors, necessitating a return to base for film processing. Manned reconnaissance, with Electro-Optical, Infrared and Synthetic Aperture Radar (SAR) sensors can provide both broad coverage and high resolution imagery at extended ranges via data link in near real time. The USMC RF-4Bs were phased out in 1990. A Navy Follow-On Tactical Reconnaissance capable aircraft will replace the interim Navy F-14 Tactical Air Reconnaissance Pod System (TARPS) with a suite of sensors that will provide near real time data-linked information, Overflight and Short Range Stand-Off (O&SRS-O) sensors used for imagery processing, analysis, and storage.

(U) JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under DEMONSTRATION & VALIDATION because it develops and integrates hardware for experimental test related to specific ship or aircraft applications.

PROGRAM ELEMENT TITLE: Tactical Airborne Reconnaissance

PROJECT TITLE: Tactical Reconnaissance System

A. (U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

(U) (\$16,172) Awarded Element III of F/A-18 ATARS development contract to complete system development and integration. Received replacement digital tape recorders. Commenced data link pod integration with ATARS and developmental flight test. Obtained Engineering Change Proposal (ECP) approval for Sensor suite and pallet production. Conducted data link minipod PDR/CDR.

(U) (\$5,258) Completed sensor specific ATARS developmental flight testing. Commenced ATARS developmental flight testing with replacement digital tape recorder and data link. Commenced/completed ATARS operational analysis flight testing. Conducted limited production readiness review. Provided in-house technical support.

(U) (\$239) Continued in-house engineering support.

2. (U) FY 1997 PLAN:

(U) (\$20,811) Continue development of F/A-18 ATARS Tactical Reconnaissance System. Conduct software development testing for incorporation into Operational Flight Plan (OFF) 13C. Commence Tactical Reconnaissance (TAC RECCE) system unique integration efforts into Radar Upgrade (RUG) phase II. Conduct minipod flight test.

(U) (\$1,018) Continue testing of ATARS and RUG II Radar with data link. Continue in-house technical support.

(U) (\$813) Continue in-house engineering support.

(U) (\$440) Portion of program reserved for Small Business Innovation Research and assessment in accordance with 15 USC 638.

3. (U) FY 1998 PLAN:

(U) (\$6,518) Complete development and integration of F/A-18 Tactical Reconnaissance System.

(U) (\$3,339) Complete ATARS and RUG II development testing with data link and Operational Flight Program (OFF) 13C. Initiate system operational evaluation. Continue in-house technical support.

(U) (\$750) Continue in-house engineering support.

PROJECT TITLE: Tactical Reconnaissance System

B. (U) PROGRAM CHANGE SUMMARY:

(U) FY 1997 President s Budget

(U) Appropriated amount:

(U) Adjustments from President's Budget:

(U) FY 1998/99 President's Budget Submit:

	FY 1996	FY 1997	FY 1998	FY 1999
	20,214	24,085	10,840	1,477
		24,085		
	+1,455	-1,003	-233	-19
	21,669	23,082	10,607	1,458

(U) Funding: The net increase of +\$1,455 thousand in FY96 reflects a Major Range Test Facility Base Restoral, SBIR assessment, and other minor program adjustments. The net decrease of -\$1,003 thousand in FY 1997 is comprised of Navy Working Capital Fund (NWCFF) and minor balancing reductions. The net decreases of -\$233 thousand in FY 1998 and -\$19 thousand in FY 1999 are comprised of NWCFF and minor balancing adjustments.

(U) Schedule: TAC RECCE was upgraded to an ACAT II Program in August 1996, changing Acquisition Approval Authority to ASN (RD&A). Based on this change new milestones are displayed on the budget exhibit. Specifically, a Program Review is now required for LRIP II (1Q98) and the associated LRIP II Contract Award is now displayed. Additionally, increased reporting requirements have caused a one quarter slip in the Program Review for LRIP I (from 4Q96 to 1Q97), LRIP I Contract Award (from 1Q97 to 2Q97), the Full Rate Production Decision (from 1Q99 to 2Q99) and the Full Rate Production Contract Award (from 2Q99 to 3Q99). Also, the Marine Corps Operational Assessment, originally scheduled for 4Q97, has been deleted based on information obtained by the Operational Test Community during Developmental Testing. Additionally, an Operational Evaluation was added in FY 1999.

(U) Technical: The original data link pod also known as the Engineering Development Model (EDM) pod was designed to house the Electro-Optic Long Range Oblique Photography System (EO-LOROPS) in addition to data link. However, EO-LOROPS was cancelled in 1994. The EDM pod housing was retained because it could still be used for Congressionally mandated data link requirement for TAC RECCE. In late summer 1995, a suitability study of the EDM pod indicated that it was unsuitable as a data link pod because of poor loading characteristics, not-carrier suitable and not jettisonable. Seven alternative designs were evaluated and in October 1995 Loral minipod was selected. This pod utilizes the same cone and tail section as the EDM pod but has a much smaller center section to house the data link Weapon Replaceable Assemblies. This commonality has also allowed continued use of the EDM pod for ground and flight risk reduction testing until a minipod is built. The data link minipod completed PDR and CDR in 1996 and one R&D asset is being built and will be test flown in 1997.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This Program Element is an FY 1995 new start. Studies and experiments will be conducted in distributed computer architecture, radar technology, and Tactical Information Management Concepts to mature them to transition candidates for introduction into the AEGIS Weapon System. This program will take a disciplined systems engineering approach to find how these advances can be integrated into the AEGIS system and subsequent combat systems, and to plan combat system baseline upgrade schedules. Fully Distributed Computing Architecture is the first advanced development effort, leveraging the joint AEGIS/Defense Advanced Research Projects Agency (DARPA) High Performance Distributed Computing (Hiper-D) technology effort. It implements the results of distributed processing advances to replace the current AEGIS Combat System architecture with an open, distributed architecture. Radar studies are also being conducted to identify state-of-the-art technology options for the next generation radar. Complex Tactical Information Management of the flow and display of tactical information through the "detect-control-engage" process to better support the operator/decision maker will be a significant priority of this task. These advanced technologies are candidate systems for future baseline upgrades. Specifically, the Surface Combatant Twenty-first Century (SC-21) program will leverage the results of these studies and experiments into SC-21 combat system development. In addition, AEGIS advance computer architecture will potentially leverage into other new ship classes including CVX and LX.

(U) JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under DEMONSTRATION & VALIDATION because it develops and integrates hardware for experimental test related to specific ship applications.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

(U) (\$250) Continued system engineering to transition open system computing designs and Commercial-Off-the Shelf/Defense Advanced Research Project Agency (COTS/DARPA) computer technologies into AEGIS Combat System production baselines.

(U) (\$910) Started prototyping and re-engineering activities on AEGIS Weapon System computer programs and port into the HIPER-D test bed.

(U) (\$1,352) Started employing functional partitioning of the AEGIS Weapon System using multi-sensor coordination and advanced tactical information management concepts and measured system performance data to develop AEGIS Weapon System architecture and performance models using prototype modeling tools.

(U) (\$145) Completed advanced technologies in the areas of radar technology and advanced display systems for application to future AEGIS baselines.

2. (U) FY 1997 PLAN:

(U) (\$250) Continue system engineering to transition open system computing designs and Commercial-Off-the COTS/DARPA computer technologies into AEGIS Combat System production baselines.

PROGRAM ELEMENT TITLE: Advanced Combat System Technology PROJECT TITLE: Adv Combat System Tech

(U) (\$2,342) Continue prototyping and re-engineering activities of AEGIS Weapon System computer programs focusing on the Baseline 7 computer architecture.

(U)(\$1,108) Derive total ship computing requirements from individual requirements for shipboard information systems. Assess the state of computing technology with respect to information transfer, open system design, processing, support software, and other related areas. Review existing commercial standards for information transfer, computing, etc. Develop a standards and design guidance document.

3. (U) FY 1998 PLAN:

(U) (\$250) Continue system engineering to transition open system computing designs and COTS/DARPA computer technologies into AEGIS Combat System production baselines.

(U)(\$2,800) Complete prototyping and re-engineering activities of AEGIS Weapon System computer programs focusing on the Baseline 7 computer architecture.

(U)(\$1,657) Continue to derive total ship computing requirements from individual requirements for shipboard information systems. Continue to assess the state of computing technology with respect to information transfer, open system design, processing, support software and other related areas. Develop an early engineering design for a total ship information transfer capability. Perform a proof of concept demonstration at a land base test site of an Anti-Air Warfare capability with an additional warfighting system.

(U)(\$525) Continue development of AEGIS Weapon System architecture and performance models using prototype modeling tools, multi-sensor coordination and advanced tactical information management concepts.

4. (U) FY 1999 PLAN:

(U) (\$250) Complete system engineering to transition open system computing designs and COTS/DARPA computer technologies into AEGIS Combat System production baselines.

(U) (\$6,152) Develop and validate a common, total ship, information system infrastructure that will facilitate the timely exchange of data among various tactical, C4I, ship control administrative, and other shipboard information systems. Study and evaluate candidate commercial intercomputer and interprocess communication tools, protocols and support software capabilities. Evaluate these against performance and reliability criteria resulting from earlier design studies. Perform a demonstration of an initial integrated set of common engineering services for the information system infrastructure, including the addition of another warfighting or other shipboard information/control system.

(U) (\$2,421) Continue development of AEGIS Weapon System architecture and performance models using prototype modeling tools, multi-sensor coordination and advanced tactical information management concepts.

(U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: The program provides for developments to combat the threat of known and projected foreign mines against U.S. Naval and merchant shipping in harbors, channels, choke points, sea lines of communications and amphibious and other fleet operating areas. It develops: (1) systems and support for systems which will detect, localize and classify moored, bottom, and close-tethered mines for use in Mine Countermeasure (MCM) MCM-1 Class, Mine Hunter Coastal (MHC) MHC-51 Class, and other surface ships; (2) systems for detection, neutralizing and sweeping mines from shallow water, very shallow water, surf zones, and beach landing craft zones in support of amphibious operations; (3) the integration and improvement of the combat system suite on MCM and MHC ships; (4) near-term and long-term Unmanned Undersea Vehicle (UUV) systems for clandestine mine reconnaissance.

(U) JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under DEMONSTRATION & VALIDATION because it develops and integrates hardware for experimental test related to specific ship or aircraft applications.

Q0260 Remote Minehunting System (RMS)	11,870	25,188	6,895	11,495	21,914	19,056	19,460	19,910	CONT.	CONT.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: (1) Improvements to AN/SQQ-32 variable depth minehunting sonar for MCM-1 and MHC-51 class ships; and (2) Remote Minehunting System (RMS): Program develops a new remotely operated minehunting system for surface ships based on a three-fold strategy: develop new vehicle; upgrade with state of the art minehunting sensors; and provide a supportable, incremental operational contingency to the fleet during the development process.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

(U) AN/SQQ-32:

(U) (\$1,043)

(U) (\$462)

(U) (\$980)

System hardware and software developed. Integration has begun.
AT-SEA system test planned and scheduled.
ILS planning completed. ILS input to design accomplished. Technical manual update began.
Specifications and top-level drawings completed.

1. (U) FY 1996 ACCOMPLISHMENTS: (Cont.)

(U) Remote Minehunting:

- (U) (\$200) Milestone I/II.
- (U) (\$250) Developed ILS plans and documentation.
- (U) (\$7,229) Awarded contract to develop RMS (V)3 Contingency Systems.
- (U) (\$1,706) Performed system engineering for RMS (V)2.

2. (U) FY 1997 PLAN:

(U) Remote Minehunting:

- (U) (\$431) System engineering (New Sensors).
- (U) (\$6,566) Continue development of RMS system (V)3 including requisite logistics support for the additional contingency systems.
- (U) (\$17,618) Develop and procure two (V)3 Engineering Development Models (EDMs) as contingency systems to accelerate fleet introduction per the CNO directed and approved Near Term Mine Warfare Campaign Plan.
- (U) (\$573) Portion of extramural program reserved for Small Business Innovation Research assessment in accordance with 15 U.S.C. 638.

Q1233 Integrated Contract Weapons System (ICWS)	6,875	7,411	5,202	1,931	845	894	596	596	0	198,693

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: (1) AN/SSQ-94 will provide on board Combat System Training for MCM and MHC ships; (2) Closed Loop Degaussing (CLDG) to improve survivability of mine countermeasures ships; (3) Mission Package 3 (MP3) upgrade to the AN/SLQ-48 to provide destruction of moored mines in place; ICWS is a series of major, incremental block upgrades to the current combat systems. It provides the MCM/MHC Class Ships an affordable and fully integrated combat weapons system which will improve mission execution efficiency, dramatically reduce life-cycle costs, and facilitate changes to meet future mission requirements. Medal is a software application program, which will become a Mine Warfare Joint Maritime Command Information Strategy (JMCIS) segment. It will provide the MCM Commander with Automated Data Processing (ADP) support for his mission planning and evaluation.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

(U) AN/SLQ-53:
(U) (\$100) Program termination costs.

(U) AN/SSQ-94:
(U) (\$2,660) Installed & tested AN/SQQ-32 modules, conducted system DT-IIB.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This program provides for a combination of joint US Marine Corps and US Navy projects planned to counter the threat to amphibious landing forces from known and projected foreign land and sea mines and obstacles in the shallow water, very shallow water and surf zone approaches to amphibious assault areas. It develops systems for mine sweeping and explosive mine clearance. Included are the Distributed Explosives Technology (DET), Shallow Water Assault Breach System (SABRE) and follow-on P3I efforts. Beginning FY98, includes transition of an ongoing Advanced Technology Demonstration Systems (ATDS) - Explosive Neutralization (EN) to an acquisition programs.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

(U) DET:

- (U) (\$863) Milestone II.
- (U) (\$5,361) Began partial fabrication of DT-IIA/B hardware.
- (U) (\$1,744) Conducted system deployment/lethality tests.
- (U) (\$1,900) Procured long lead detonating cord for DT-IIB/OT-II.

(U) SABRE:

- (U) (\$3,601) Fabricated test hardware for DT-I.
- (U) (\$734) Milestone II.
- (U) (\$1,310) Deployment and DT-I test.

(U) OBS:

- (U) (\$464) Preliminary design - Explosive system.
- (U) (\$450) Preliminary design - Mechanical system.

2. (U) FY 1997 PLAN:

(U) DET:

- (U) (\$8,282) Fabrication of DT-IIB/OT-II hardware.
- (U) (\$1,900) Conduct DT-IIA and DET/SABRE LCAC interoperability tests.
- (U) (\$1,450) Update documentation package.
- (U) (\$1,500) Begin LCAC integration.

Quantity of RDT&E Articles/NMRS 1

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This project was completely restructured in FY 1994 in response to Congressional direction provided in the FY 1994 DOD Appropriations Act. Specifically, the Office of the Secretary of Defense and the Navy were directed to (1) establish priorities among various proposed UUV programs, (2) focus on near-term mine countermeasures issues, and (3) establish affordable, cost-effective programs. The Navy developed an overall UUV Program Plan, which was approved by ASN(RD&A) in June 1994, endorsed by USD(A&T) and forwarded to Congress to support FY 1995 budget deliberations.

(U) The UUV Program Plan establishes a clandestine, near-term mine reconnaissance capability as the Navy's top UUV priority; a long-term mine reconnaissance system as priority two; the conduct of surveillance, intelligence and tactical oceanography missions as priority three; and exploring advanced UUV designs for the future as priority four. FY 1995 Congressional language complimented the Navy Plan and fully supported priorities one and two starting in FY 1995.

(U) The UUV project funds development of a clandestine Near-Term Mine Reconnaissance System (NMRS) and a Long-Term Mine Reconnaissance System (LMRS), the Navy's two highest UUV priorities. The NMRS will be a minehunting UUV system launched and recovered from an SSN-688 class submarine and will be capable of mine detection, classification, and localization. In accordance with the UUV Program Plan, one NMRS Operational Prototype (OP) system will be delivered to the Fleet by early 1998. No further production of the NMRS is planned. Since the NMRS is viewed as a stop-gap capability with a life expectancy of approximately 6 years, the LMRS will be developed to provide a robust, long-term, Fleet capability to conduct clandestine minefield reconnaissance. The first LMRS will replace the NMRS as the NMRS is retired and several Long Term Mine Reconnaissance Systems will be procured beginning in FY 2003.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

(U) (\$16,539) Priority 1 (NMRS): Continued to execute NMRS contract. Completed design and continued fabrication of system. Commenced system integration.

(U) (\$2,915) Priority 2 (LMRS): Completed LMRS Cost and Operational Effectiveness Analysis (COEA). Conducted MS I/II and developed Request For Proposal (RFP) for competitive contract awards. Conducted contracting activities and awarded three LMRS Preliminary Design contracts.

DATE: February 1997

BUDGET ACTIVITY: 4 PROGRAM ELEMENT: 0603502N

PROGRAM ELEMENT TITLE: Surface and Shallow Water Mine Countermeasures

PROJECT NUMBER: V2094

PROJECT TITLE: Unmanned Underwater Vehicle

2. (U) FY 1997 PLAN:

(U) (\$8,809) Priority 1 (NMRS): Complete fabrication and system integration. Conduct factory testing of NMRS and begin at-sea testing. Develop RFP for NMRS Maintenance and Support (M&S). Conduct contracting activities and award NMRS M&S contract.

(U) (\$15,324) Priority 2 (LMRS): Continue execution of and complete LMRS Preliminary Design contract(s). Conduct LMRS Preliminary Design Review (PDR). Commence preparation for award of Detailed Design Contract(s) in FY 1998.

(U) (\$594) Portion of extramural program reserved for Small Business Innovation Research (SBIR) assessment in accordance with 15 U.S.C. 638.

3. (U) FY 1998 PLAN:

(U) (\$5,942) Priority 1 (NMRS): Complete at-sea testing of NMRS and achieve Initial Operational Capability (IOC) Deliver NMRS to Fleet to begin operational use. Begin NMRS Maintenance and Support activities of the Operational Prototype system.

(U) (\$14,527) Priority 2 (LMRS): Award and execute up to two Detailed Design Contract(s). Commence preparations for award of the LMRS Development Phase contract. Conduct product improvement risk mitigation, as required.

4. (U) FY 1999 PLAN:

(U) (\$4,993) Priority 1 (NMRS): Continue Maintenance and Support of the Operational Prototype System..

(U) (\$20,017) Priority 2 (LMRS): Complete LMRS Detailed Design and conduct the LMRS Critical Design Review. Award and commence execution of the LMRS Development Phase contract. Conduct product development risk mitigation, as required.

B. (U) PROGRAM CHANGE SUMMARY:

(U) FY 1997 President's Budget:	FY 1996	FY 1997	FY 1998	FY 1999
	19,969	25,960	21,446	24,954
(U) Adjustments from FY 1997 PRESBUDG:	-515	-1,233	-977	+56
(U) FY 1998/1999 OSD/OMB Budget Submit	19,454	24,727	20,469	25,010

(U) CHANGE SUMMARY EXPLANATION:

(U) Funding: The reductions in FY 1996 reflect an SBIR assessment (-\$419K) and other minor pricing adjustments (-\$96K). The reduction of \$1,233K in FY 1997 is for Congressional undistributed reductions. FY 1998/1999 changes due to program restructuring and minor pricing adjustments.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This non-acquisition (Non-ACAT) program supports the advanced development and testing of improvements to present and future sonar and combat control systems. The goal is to address the technology challenges that marginalize tactical control in littoral and open ocean environments during the performance of a variety of missions including peacetime engagement, surveillance, deterrence, regional sea denial, precision strike, task group support, and ground warfare support. Prototype hardware and/or software systems are developed under this program to demonstrate technologically promising system concepts in an at-sea submarine environment. Technology areas specific to this program include transducers, hull-mounted and towed arrays, on-board sonar signal processing, target motion analysis (TMA), multiple contact processing and test and evaluation.

(U) JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under DEMONSTRATION AND VALIDATION because it develops and integrates hardware for experimental test related to specific ship and aircraft applications.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

(U) (\$2,550) Advanced Tactical Control. Completed Geographical Referenced Event Triggered Expert Program (GRETEP) development. Integrated Digital Nautical Chart from (DMA), Target Motion Analysis improvements and All Source Contact Management for at-sea evaluation. Developed common architecture for the prototype Tactical Control System (TCS).

(U) (\$11,776) Advanced Sonar Systems and Processing. Continued Automated Tactical Passive Processing development with emphasis on traditional processing (TB-16, 23, 29 sphere) and non-traditional processing. Continued to define system baselines and Advanced Processing Builds (APB) to support submarine superiority initiatives. Continued to plan for at-sea testing program. Commenced comparative performance evaluation of passive processing baselines (BSY-1, BSY-2, NSSN, SURTASS). Continued fiber optic/velocity sensor conformal array development. Continued SUBPAC/SUBLANT follow-on at-sea testing and transition of prototype Advanced Fleet Towed Array Systems (AFTAS) and non-traditional processing systems. Completed TB-16 lightweight tow cable.

(U) (\$5,200) High Frequency Sonar Program (HFSP). Continued planning for HFSP sea test with large sail receive array. Continued feasibility studies for algorithmic improvements for shallow water operations (vertical resolution, clutter reduction, environmental exploitation). Continued transition of HFSP software, algorithms, and specifications to BSY-1 and NSSN.

(U) (\$6,900) Light-Weight Wide Aperture Array (LWAA). Continued the development and testing of fiber optic pressure sensors as an improvement for AN/BQG-5 WAA and production of the associated in-board opto-electronics. Coordinated the in-board opto-electronics efforts to also support fiber-optic flexural disk accelerometers in the Conformal Acoustic Velocity Sensor (CAVES) flank array project.

Systems Development

(U) (\$400) Test and Evaluation. Completed post Rangex exercise analysis. Continued development and documenting of system level measures of effectiveness. Continued planning and support efforts for at-sea testing program (FY97). Continued requirements definition for standard at-sea sonar data-gathering program and automated real time test reconstruction system.

2. (U) FY 1997 PLAN:

(U) (\$3,250) Advanced Tactical Control. Demonstrate GRETEP at sea (completed 12/96 on USS PHILADELPHIA). Develop common fusion engine for surface ship and submarine contact management. Develop system engineering and development guidelines for Tactical Control Program products. Provide contact management and data fusion products for advanced sensor products (such as AFTAS and RATRAP) and acoustic Rapid COTS Insertion (ARCI) efforts, Develop Tactical Control MOEs/MOPs to support evaluation of DARPA Tactical Scene Operator/Associated (TSO/A). (October 1996 - July 1997).

(U) (\$16,931) Advanced Sonar Systems and Processing. Continue passive processing comparative performance evaluations to establish advanced processing builds. Complete definition and commence integration of TB-16/23 related Advanced Processing Build (APB); plan APB at-sea evaluation. Conduct evaluation of BQQ-5/BSY-1 related sphere array processing improvements to support rapid COTS insertion. (October 96 - March 97)

(U) (\$100) Advanced Towed Arrays. Initiate planning for high gain Multiline Towed Array (MLTA) testbed and innovative handling system. (October 96 - March 97)

- (U) (\$7,100) High Frequency Sonar Program. Continue planning and equipment preparation for HFSP sea-tests with large sail receive array. Continue HFSP performance improvement effort. Complete transition documentation. Define HFSP conformal array options to determine system performance needs. Commence consolidation of alternative HFSP processing approaches. (October 96 - March 97)
- (U) (8,800) Fiber Optics. Continue the development and testing of fiber optic pressure sensors as an improvement for AN/BQG-5 WAA and development of the associated in-board opto-electronics. (October 96 - May 97)
- (U) (\$500) Test and Evaluation. Continue planning for towed array APB at-sea testing. Coordinate data collection efforts to support processing algorithm development and validation. Continue development of submarine acoustic/environmental data-gathering program to include at-sea evolutions. Continue development and establishment of an automated real time test reconstruction effort. Continue support of HFSP sea-tests with large sail receive array. (October 96 - February 97)
- (U) (\$610) Portion of extramural program reserved for Small Business Innovation Research assessment in accordance with 15 U.S.C.638.

3. (U) FY 1998 PLAN:

- (U) (\$6,142) Advanced Tactical Control. Analyze Tactical Control guidelines to Combat System upgrade for CCS MK2 Block IC. Transition TMAI, All Source Contact Management for SSNs. Develop Weapon Employment Modules. Initiate transition and integration of own-ship vulnerability assessment module based on DARPA and SSN/SSBN Security program efforts (TSM, ISSIPS). Continue TSO/A integration and evaluation. Supply joint efforts in ASW C4I and conduct joint tactical control sea test. (October 97 - March 98)

Complete integration of TB-16/23 related APB; assess performance and conduct at-sea evaluation. Initiate TB-16/23 related APB to Rapid COTS Insertion effort. Initiate TB-29 related APB definition and commence integration. Initiate definition of sphere array-related APB. Commence integration of [classified material deleted] approaches into passive sonar processing. Adapt surface developed active sonar processing for operation with sphere array. Initiation and development of enhanced localization approaches including passive ranging and TMA. (October 97 - July 98)

(U) (\$3,600) Advanced Towed Arrays. Commence development of high gain MLTA testbed and innovative towed array handling system concepts. Deliver MLTA compatible tow cable. Initiate 3 line MLTA algorithm and processing. Evaluate improvements in array telemetry and shape estimation systems for applicability to MLTA. (October 97 - July 98)

(U) (\$10,482) Advanced Hull Array. Effect transition of Conformal Acoustic Velocity Sensor (CAVES) flank array project to this line. Continue CAVES technology development. Conduct quarter scale array performance lake tests and evaluate performance as a passive receiver. Initiate planning and development of CAVES based technology WAA array equivalent. (October 97 - July 98)

(U) (\$7,100) High Frequency Sonar Program. Conduct HFSP sea test and conduct performance analysis. Continue HFSP performance improvement effort. Complete consolidation of alternate HFSP processing approaches. Initiate HFSP

modifications to implement developed algorithm improvements and correct deficiencies identified in sea-tests.
(October 97 - July 98)

(U) (\$1,000) Test and Evaluation. Continue data collection efforts to support processing algorithm development and validation. Conduct at-sea test of TB-16/23 related APB. Validate performance of automated real time test reconstruction tools for accuracy. Define, develop and deploy follow-on high data rate recorders for sphere/hull arrays. (October 97 - June 98)

4. (U) FY 1999 PLAN:

(U) (\$6,400) Advanced Tactical Control. Incorporate ARPA and 6.2 Development Products into TCS system. Conduct the Joint TCS sea test. Complete contact management improvements and deliver to SFMPL and CCS MK-2 Block 1C for implementation. Continue vulnerability assessment effort. (October 98 - June 99)

(U) (\$36,448) Advanced Sonar Systems and Processing. Continue integration, conduct performance assessment and initiate transition of TB-29 related APB to Rapid COTS Insertion effort. Continue small MLTA-related and sphere array definition APB definition and commence integration and transition to Rapid COTS Insertion effort. Continue adaptation and evaluation of surface developed active processing algorithms for sphere array. Initiate follow-on towed array and hull array APBs. Continue [classified material deleted] and enhanced localization efforts.
(October 98 - July 99)

(U) (\$5,450) Advanced Towed Arrays Continue development and laboratory evaluation of high gain MLTA and flexible array handling system. (October 98 - March 99)

Systems Development

(U) CHANGE SUMMARY EXPLANATION:

(U) Funding: FY1996 decrease due to Jordanian rescission (-\$31K), SBIR (-\$250K) and below threshold reprogramming (-\$100K). FY1997 plus up to fund Fiber Optics (+\$10,800K) and Submarine Technology (+\$9,200K). FY 1997 decrease due to undistributed congressional reductions (-\$294K) and Navy Working Capital Funds (-\$1,564K). FY1998 plus up to fund AN/BSY-1, ECP-1000 (Acoustic Rapid COTS insert) (+\$18,374); increase due to transfer of CAVES effort from PE 0603751N (+\$10,482); and funds increased to support increased effort in Submarine Technology based on the Secretary of Defense Report on Nuclear Attack Submarine Procurement and Submarine Technology. (+\$39,000) and increase for NWC rate restoration totaling (+\$72K). FY1998 decrease due to programmatic reductions (-\$6,000); decrease for submarine acoustics (-\$5,000K), decrease for submarine technology (-\$14,000K), and other minor adjustments and undistributed adjustments for Navy Wide Capital Funds (-\$1,552). FY1999 plus up to fund AN/BSY-1, ECP-1000 (Acoustic Rapid COTS insert) (+\$22,412); increase to fund CAVES effort (+\$12,523) and an increase for submarine technology (+\$25,000K). FY1999 decrease: due to programmatic reductions (-\$7,500K), submarine acoustics (-\$5,000), other minor adjustments and Navy Wide Capital Funds (-\$1,302K).

(U) Schedule: Not applicable.

(U) Technical: Proceed with category 2 and CORE technologies as identified in SECDEF report on Nuclear Attack Submarines.

C. (U) OTHER PROGRAM FUNDING SUMMARY: Not applicable.

(U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This Navy unique program addresses all technology areas associated with Navy/Marine Corps aircraft operations aboard ships. The program includes:

(U) (S1722) Development of standardized, supportable and maintainable aircraft carrier (CV/CVN) weapons elevators components.

(U) (W1723) Development of all systems required to provide approach and landing guidance and control, recovery, service, support and launch aircraft operating onto or from ships. Payoffs include increased safety, greater sortie generation rates, enhanced aircraft boarding rates, reduced manning, increased aircraft service life and fleet modernization.

(U) (S2208) Development of ship hull, mechanical, electrical, aviation and combat support systems, subsystems and components to significantly improve aircraft carrier affordability, survivability and operational capabilities and to meet the requirements of existing and pending regulations and statutes critical to the operation of future aircraft carriers.

(U) (W2269) Development of lightweight mat and expeditionary arresting gear for use at Marine Corps Expeditionary Airfields (EAF).

(U) JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under DEMONSTRATION & VALIDATION because it develops and integrates hardware for experimental test related to specific ship or aircraft applications.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This project provides for the advanced development, fabrication, test, evaluation and documentation of standardized aircraft carrier weapons elevators components such as control systems, hoist machinery, doors and hatches. Emphasis is placed on the improvement of safety, reliability, maintainability, watertight integrity and weight reduction.

(U) PROGRAM ACCOMPLISHMENT AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$413) Procured and installed prototype variable speed AC drive system.
- (U) (\$175) Identified and procured advanced platform position sensor.
- (U) (\$27.5) Completed evaluation and testing of epoxy wire rope sockets.
- (U) (\$ 40) Completed testing of new aircraft wire rope designs.
- (U) (\$ 50) Completed testing of alternative wire rope greases.
- (U) (\$ 42.5) Tested new S-Flex gasket for watertight doors.
- (U) (\$255) Developed concepts for PLC troubleshooting panel.

2. (U) FY 1997 PLAN:

- (U) (\$430) Conduct variable speed AC drive and platform position sensor tests on LBES. (2/97)
- (U) (\$40.7) Identify and procure linear actuating sys for use on weapons elevator doors and hatches (2/97-6/97)
- (U) (\$15.3) Watertight door gasket testing (12/96-9/97)

3. (U) FY 1998 PLAN:

- (U) (\$350) Develop imbedded sensors for monitoring elevator equipment condition. (11/97-6/98)
- (U) (\$350) Install and test linear actuating system for elevator doors at LBES. (11/97-6/98)
- (U) (\$77) Conduct investigation of alternative elevator overspeed governor designs (11/97-6/98)
- (U) (\$100) Test wire rope coatings to prevent internal corrosion at termination (11/97-6/98)

4. (U) FY 1999 PLAN:

- (U) (\$400) Conduct investigation and engr analysis for integration of multiple elevator PLCs. (11/98-6/99)
- (U) (\$400) Continue development and procurement of alternative elevator overspeed governors. (11/98-6/99)
- (U) (\$236) Complete development and testing of imbedded sensors in conjunction with PLC. (11/98-6/99)

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This project addresses the Demonstration and Validation (DEMVAL) of advanced systems to meet Navy unique shipboard operational requirements for:

(U) DEMVAL of critical components of the Electromagnetic Aircraft Launch System (EMALS) including the launch engine and its associated power generation, storage and distribution system.

(U) DEMVAL of advanced optical, electro-optical and laser tracking, approach and landing control and guidance systems, and air operations reporting systems for pilots, Landing Signal Officers (LSO) and ship's crew. The Improved Carrier Optical Landing System (ICOLS), which includes the Improved Fresnel Lens Optical Landing System (IFLOLS) and the Long Range Line-up System (LRLS), will provide optical displays so that the pilot can take early corrective actions in order to prevent landing accidents and increase the aircraft boarding rate. The Integrated Shipboard Information System (ISIS) will provide automated air operations information to decision makers via electronic status boards, replacing the current manpower intensive, hand-written status boards in all of the air operations work areas. ISIS also includes supporting systems which will optimize the flow and processing of situational management information. The Virtual Imaging System for Approach and Landing (VISUAL) will provide the ship's company and pilots with enhanced images of the aircraft and ship, respectively, in low visibility and night conditions. The Shipboard Optical Landing System (SOLS) will provide advanced visual landing aids (VLA) for fixed wing, rotary wing and Vertical/Short Take-Off and Landing (VSTOL) aircraft, so that pilots can fly safer and more accurate approaches to all classes of ships.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

• (U) (\$284) Continued engineering support for the EMALS ADM.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This project provides for the development of aircraft carrier (CV/CVN) specific technologies, the infusion of the surface ship technology base into future aircraft carriers and the potential realization of subsystem design capabilities not currently feasible. This project transitions the most promising technologies from the Navy technology base, other government laboratories, and the private sector into specific advanced development efforts. All systems developed in this project have the potential to support emerging requirements and other promising systems technologies for insertion into new aircraft carrier designs. The emphasis is directed toward developing ship hull, mechanical, electrical, aviation and combat support systems, sub-systems and components to significantly improve aircraft carrier affordability, survivability, and operational capabilities and to meet the requirements of existing and pending regulations and statutes critical to the operation of future aircraft carriers.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$4,677) Carrier Technology Assessment and Affordability: Continued engineering assessment of alternative ship design concepts, improved aircraft carrier design tools and assessed aircraft carrier design criteria. Evaluated cost and capabilities of design concepts. Continued development of a comprehensive roadmap for future sea-based tactical aviation platforms. Continued assessment of design concepts of simplified systems for selected candidates from the electrical system, structural system, auxiliary and fluid systems and design concepts for selected standard, modular-packaged subsystems and components.

- (U) (\$1,538) Initiated development of an Aviation Weapons Information Management System (AWIMS).

- (U) (\$2,000) Initiated development of an advanced Zonal Electric Distribution System for aircraft carrier

2. (U) FY 1997 PLAN:

- (\$5,670) Carrier Technology Assessment and Affordability: Continue engineering assessment of alternative ship design concepts, improve aircraft carrier design tools and assess aircraft carrier design criteria. Evaluate cost and capabilities of design concepts. Complete development of a comprehensive roadmap for future sea-based tactical aviation platforms. Continue assessment of design concepts of simplified systems for selected candidates from the structural system, auxiliary and fluid systems and design concepts for selected standard, modular-packaged subsystems and components. Continue engineering assessment of candidate subsystems and components that could be made common with other surface and submarine subsystems and components to reduce total Navy logistic support costs and simplify ship installation. Continue assessment of alternative propulsion system configurations. Continue development of selected auxiliary machinery modules to complement simplified distributive system architectures for improved affordability.

- (U) (\$ 101) Portion of extramural program reserved for Small Business Innovative Research assessment in accordance with 15 U.S.C.

3. (U) FY 1998 PLAN:

- (U) (\$ 4,746) Continue improvement of aircraft carrier design tools and assess aircraft carrier design criteria. (11/97-6/98)
- (U) (\$23,000) Commence development of advanced aircraft launch alternatives including an Advanced Technology Launcher (ATL) and possible integration with ski-jumps. (11/97-6/98)
- (U) (\$ 3,000) Commence development of an integrated rapid aircraft turnaround capability to reduce manpower on the flight deck. (11/97-6/98)
- (U) (\$34,000) Commence propulsion plant alternatives assessments including nuclear and conventional power generation, integrated machinery controls, and integrated electric power systems. (11/97-6/98)

(U) FY 97 President s Budget:

FY 1996	FY 1997	FY 1998	FY 1999
<u>8,272</u>	<u>6,017</u>	<u>1,800</u>	<u>1,774</u>

(U) Adjustments from FY 97 PRESBUDG:

-57	-246	+88,446	+103,178
-----	------	---------	----------

(U) FY 98/99 PRESBUDG Submit:

8,215	5,771	90,246	104,952
-------	-------	--------	---------

(U) CHANGE SUMMARY EXPLANATION:

(U) Funding: FY96 - (-57) Minor pricing adjustments. FY97 - (-246) General undistributed reductions . FY98 - (+89,559) CVX78 Recapitalization, (-797) General undistributed reductions, (-316) Revised DOD inflation rates and minor pricing adjustments. FY99 - (+103,819) CVX78 Recapitalization, (-45) General undistributed reductions, (-596) Revised DOD inflation rates and minor pricing adjustments.

(U) Schedule: Completion of Aviation Weapons Information Management System slipped one year. FY98 and FY99 increase support technology efforts associated with design and development of systems for potential use on CVX-78.

(U) Technical: Increased risk to achievement of technical goals.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This project addresses the Demonstration and Validation (DEMVAL) of lightweight airfield mat and expeditionary arresting gear to meet naval aviation unique Expeditionary Airfield (EAF) operational requirements including transportability requirements on Maritime Prepositioning Ships (MPS).

(U) The EAF mat presently available (AM-2) was developed for heavy fighter aircraft operations, such as the F-4, and is heavy and cumbersome to deploy. Potentially lightweight (1/2 the weight of AM-2) and less voluminous (1/2 the volume of AM-2) mat material may be technically feasible and commercially available, but the potential materials must be evaluated for use with current type/model/series naval and Air Mobility Command (AMC) aircraft at Vertical and Short Take-Off and Landing (VSTOL) airfields ashore. Current aluminum matting requires approximately 15 days to install a complete airfield. Potential material will meet Marine Corps requirements to install complete airfield in five days or less. Candidate mat materials under consideration for continuation of this on-going evaluation program include reinforced synthetic composite materials and polyvinyl fiberglass. These mat materials will be configured and evaluated for the Marine Corps operational scenarios.

(U) The expeditionary arresting gear program will provide the Marine Corps with the capability to conduct short span arrestments of all Navy and Marine Corps tail hook aircraft in the expeditionary environment. The current M-21 arresting gear cannot be adapted to operate on short span (less than 100 feet) surfaces and is incapable of arresting the full inventory of aircraft under casualty (no flaps or half flap) conditions. Installation of the M-21 requires 24 hours, extensive excavation and heavy support equipment. The M-21 has inadequate reliability and several replacement components are no longer produced. The replacement gear will provide transportability, rapid setup, full inventory operational capability under all arrestment conditions, and adequate operational reliability.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS: Not applicable
2. (U) FY 1997 PLAN:

- (U) (\$ 54) Procure limited amounts of candidate mat, test materials for EAF landing sites. (11/96-6/97)

- (\$3,775) Validate absorber, tape and cross deck pendant design and performance. Develop system requirements for mobility, auxiliary and anchoring subsystems prior to integration and demonstration of full system capability. (11/96-6/97)

(U) FY 1998 PLAN:

- (U) (\$ 67) Evaluate candidate materials to determine heat resistant and load bearing properties. (11/97-6/98)
- (U) (\$4,142) Validate mobility, auxiliary and anchoring subsystem alternatives. Conduct system integration studies and develop prototype designs. (11/97-6/98)

(U) FY 1999 PLAN:

- (U) (\$ 101) Validate compatibility of mat panels with AM-2 mat and aircraft operations. (11/98-6/99)
- (U) (\$2,572) Fabricate full scale system demonstration units suitable for validation of concepts in a test and controlled operational environment. (11/98-6/99)

(U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This program develops affordable non-propulsion machinery systems, components, and improvements for current and future surface fleet Hull, Mechanical and Electrical (HM&E) systems. It includes auxiliary machinery, hull and deck machinery, Fiber Optic (FO) systems, shipboard corrosion control, HM&E materials, Underway Replenishment (UNREP), and ship salvage systems. The integrated topside design portion of this program element develops and integrates the necessary technologies to achieve a total integrated topside architecture focused on future surface combatant ships. Technology areas including topside signature control, sensor and antenna integration, weapon system integration, HM&E integration, related decision making tools, and composite materials will be addressed. Other stand alone technology programs will be synergistically integrated with the topside design integration effort to assure total ship systems integration for future ship design efforts. Surface combatants will need an added (stealth) layer of defense to support hardkill and softkill systems in defeating future threats. Composite materials will be considered for their corrosion control and reduced maintenance attributes. Fiber optics development includes the distributed combat systems under the Integrated Interior Communication and Control ((IC)2) total shipwide network engineering, Fiber Optic Data Multiplexing System (FODMS (1) & (2)), fiber optic shipboard cable topology, analog and digital optoelectronic interfaces, passive optical sensors, and local area network installation projects.

(U) The program is closely coordinated with Advanced Surface Machinery Program (ASMP), formerly Integrated Electric Drive. The program does not duplicate any efforts and is independent of ASMP.

BUDGET ACTIVITY: 4

PROGRAM ELEMENT: 0603513N

PROGRAM ELEMENT TITLE: Shipboard Systems Component
Development

(U) System developments in the Shipboard Auxiliary Systems Development Project (S0382) are usually ACAT IVT or IVM. The HM&E Improvement Project (S1712) is non-ACAT, resulting primarily in new specifications, standards, and operating procedures. The program uses technology from industry and Navy exploratory development programs, evaluates breadboard units in the laboratory, and develops prototype equipment for technical and operational evaluation in Navy platforms and facilities. Thrusts are directed towards improved affordability, performance, producibility, service life, reliability and maintainability, signature reduction, safety, commonality, and standardization, and towards reduced life cycle and acquisition costs, and reductions in weight, volume, and manning. Systems generally apply to all ships and many components may be backfitted during overhauls or equipment replacements, or implemented relatively late in a new ship design cycle. This presents many windows of opportunity to transition technology to the current and future fleet.

(U) JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under demonstration and validation because it develops and integrates hardware for experimental test related to specific ship or aircraft applications

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This project primarily supports ACAT IV projects that develop shipboard fiber optics and auxiliary machinery components and systems to improve affordability, performance, reliability, and maintainability and result in size, weight, and/or acquisition and life cycle cost savings. The auxiliary machinery HM&E developments include standard commercial based components applying new technology which provide the existing and future fleet affordability through reductions in logistics piece part proliferation including low and high pressure air systems, pumps, and advanced water systems to make and disinfect potable water. The project addresses development of machinery and systems architectures to reduce future ship acquisition and operating costs with advanced machinery, advanced degaussing, controllers, solid state power electronics, new underway replenishment concepts and salvage systems. Fiber Optic Topology provides the criteria and specifications for the design, implementation and installation of the physical cable plant on board ship to support data transmission requirements. Fiber optic sensors measure parameters such as pressure, temperature, speed (revolutions per minute) and physical separation (limit switches). This program area also provides performance specifications for shipboard use. (ICP will coordinate and integrate the development of hardware and software to provide total-shipwide communications for combat systems networking based on standard open architecture networks.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$8,911) Continued development of advanced affordable HM&E auxiliary machinery systems, components and shipboard salvage systems. Initiated Techeval of standard family composite centrifugal pumps. Continued development of advanced auxiliary machinery and systems to reduce operational costs and improve responsiveness of future surface combatants including new equipment designs, system behavior and control models,

PROJECT TITLE: Shipboard Auxiliary Systems Development

diagnostic and prognostic methodologies, advanced controllers, sensors, software and maintenance methods including fuel cells, ship service generator sets, polymer current limiter, and advanced degaussing systems. Initiated manning functional analysis; development of current system automation baseline, autonomic hardware, current and advanced system enhancements and concepts for reduced maintenance and manning. Completed evaluation of amphibious ship physical magnetic model and determine effectiveness of advanced degaussing system. Continued development of Power Electronic Building Block (PEBB) module, and initiated simulated based design of in-theater replenishment concepts. Awarded contracts for prototype polymer current limiters (PCL), PEBB brassboard, and initiated HP membrane dehydrator demonstration. Commenced Shipeval/Techeval of Electrolytic Disinfectant Generator (EDG) on CVN-71.

- (U) (\$5,350) Verified and documented (IC)2 interfaces for combat system components, machinery control system components and Joint Maritime Command Information System (JMCIS). Continued implementing the (IC)2 total ship systems integration process on the LPD-17 baseline design. Maintained and upgraded distributed (IC)2 engineering and integration developmental facility to Asynchronous Transfer Mode (ATM) backbone/network technology. Supported potential user system development with advanced network multimedia technologies. Developed Life Cycle Management Plan and Configuration Management Plan for shipboard fiber optic networks. Continued development of design guidelines for generic fiber optic topology including high capacity single mode cable and components and cable plant design for new construction ships and selected backfit ships. Continued qualification of new fiber optic network components. Completed development of passive optical sensors.
- (U) (\$481) Terminated the project for the development of a Remotely Operated Vehicle (ROV) umbilical Splicing System, continued the development of the Underwater Inspection Sensors; completed the development of the ROV Power System Study; and continued development of the Towline Extreme Tension Model for Programs of Ship Salvage Engineering (POSSE) and USN Tow Manual.
- 2. (U) FY 1997 PLAN:
 - (U) (\$7,724) Continue development of advanced machinery for HM&E systems to reduce operational, manning, and maintenance costs. Continue development of manning analysis, current and advanced system enhancements and initiate simulation and evaluation of advanced hardware control and concepts maintenance to reduce shipboard manning and maintenance. Begin development of advanced machinery/system integration software. Labeval/Shipeval prototype high pressure membrane dehydrator. Continue development of PEBB modules, PCL, fuel cells, and packaged

commercial equipment for military use. Complete standard family composite centrifugal pumps and EDG Techeval and obtain MS III approval. Transition magnetic silencing technology for steel hull surface ships; including closed loop degaussing. Contract for full scale ships service molten carbonate fuel cell design and 500kw demonstrator.

(U) (\$1,482) Complete engineering and development of the Total Ship Integration Management (TSIM) process documentation for the integration of combat system, HM&E, engineering, logistics, and administrative networks for LPD-17. Complete development of PRIDE database and documentation to support new, upgrade, and SHIPALT design efforts. Maintain/upgrade and complete distributed (IC)2 engineering and integration developmental facility. Complete design of potential user systems utilizing the developmental ATM (IC)2 network/backbone. Complete shipboard application of ATM technology. Execute Air Blown Fiber evaluation plan for Navy shipboard fiber optic cable plant installations. Complete conversion of Mil-Specs/Stdts to performance/industry standards in accordance with acquisition reform strategy. (915K used to forward finance FY98 program due to termination of Fiber Optics.)

- (U) (\$400) Complete development of the Underwater Inspection Sensors; complete development of the Towline Extreme Tension Model for POSSE and USN Tow Manual; initiate development of the Under Water Closed Circuit Blasting System; and initiate development of the Transient Analysis Model for POSSE.
- (U) (\$6,503) Support development of prototype/demonstration ship control and monitoring systems, including hardware and software concepts, to minimize manning on surface combatants.
- (U) (\$284) Portion of extramural program reserved for Small Business Innovative Research (SBIR) assessment in accordance with 15 U.S.C. 638.

3. (U) FY 1998 PLAN:

- (U) (\$6,827) Continue development of advanced HM&E machinery and systems to reduce manning and eliminate at-sea maintenance. Conduct laboratory evaluations and demonstrate proof of concept for reduced manning of auxiliary machinery and system architectures. Continue development of PEBB modules, PCL, fuel cells, HP membrane dehydrator, and complete latent defect testing of EDG and composite pumps. Start development of a magnetic on-board self monitoring and control system (Closed Loop Degaussing) for surface combatants. Concentrate initial

efforts in area of on-board sensors and control algorithms. Conduct molten carbonate fuel cell hardware demonstration. (915k used to forward finance FY98 program due to the termination of Fiber Optics.)

- (U) (\$400) Complete development of the Transient Analysis Model for POSSE; continue development of the Under Water Closed Circuit Blasting System; and initiate development of the ROV Power System.
- 4. (U) FY 1999 PLAN:
 - (U) (\$15,685) Continue development of advanced HM&E machinery and systems architectures to reduce manning and eliminate at-sea maintenance. Initiate full scale demonstration of autonemics machinery zone. Continue development of PCL, PEBB modules, fuel cells, and HP membrane dehydrators. Procure on-board sensor suite, data acquisition and controller equipment, and continue development of control algorithm for Closed Loop Degaussing.
 - (U) (\$450) Complete development of the Under Water Closed Circuit Blasting System; complete development of the ROV Power System and initiate development of the improved shaft coating system.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This project is non-ACAT and develops improved equipments which are small but critical components of non-propulsion HM&E systems. The program is directed toward improved affordability, performance, reduced life cycle cost, reliability and maintainability, signature reduction, standardization, and weight and manning reductions for the existing and future fleet. The integrated topside design portion of this program element develops and integrates the necessary technologies to achieve a total integrated topside architecture focused on future surface combatant ships. Technology areas including topside signature control, sensor and antenna integration, weapon system integration, HM&E integration, related decision making tools, and composite materials will be addressed. Other stand alone technology programs will be synergistically integrated with this topside design integration effort to assure total ship systems integration for future ship design efforts. Surface combatants will need an added (stealth) layer of defense to support hardkill and softkill systems in defeating future threats. Composite materials will also be considered for their corrosion control and reduced maintenance attributes.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$1,360) Continued development of advanced affordable, mechanical, electrical, and hull and deck auxiliary machinery including variable capacity motors & controls, and components including alternative piping and valve specs and standards and new affordable efficient ships service power generation. Completed demonstration of alternative propulsion diesel engine starting system. Qualified Glass Reinforced Plastic (GRP) valve for seawater, freshwater, oily waste, waste water and plumbing drain, and continued Labeval and Shipecal of prototype standard GRP ball valves. Completed low pressure membrane dehydrator evaluations, design and specifications. Completed evaluation of commercial variable speed drives.
- (U) (\$534) Established initial approach to reduce signatures of all topside systems. Assess the significance of signature components (combat, communications, and HM&E) access the most critical improvements needed. Continued

topside design requirement definition, technology assessments, and composites implementation plan to address mission needs. Completed evaluation of integrated composite structure/sensor task and assembled initial systems engineering approach required for topside systems signature reduction.

2. (U) FY 1997 PLAN:

- (U) (\$711) Continue development of affordable mechanical, electrical and hull and deck machinery. Complete development of Navy Standard GRP Ball Valves. Award contract and conduct trade off analysis ship impact study of affordable efficient ships service power generation. Complete Labeval of alternate diesel starting systems.
- (U) (\$867) Complete long-term project plan that defines design tools, signature data, subcomponents, components, and full scale prototypes necessary to demonstrate topside design integration concepts, including composite materials for future surface combatants. Establish the total signature budget for the next generation surface combatant systems and subsystems that distributes the signature over the platform. Evaluate composite materials for their corrosion control and reduced maintenance attributes. Draft and formalize a long term Signature Management Plan (SMP) for implementation of reduced signature technology within the ship acquisition cycle and produce definitive component signature goals for topside equipments anticipated on future ship designs. Begin scale model development work to refine computer assessments on ship signatures predictions and goals with emphasis on major hullform and superstructure arrangements.

- (U) (\$11) Portion of extramural program reserved for Small Business Innovation Research (SBIR) assessment in accordance with 15 U.S.C. 638.

3. (U) FY 1998 PLAN:

- (U) (\$981) Continue development of affordable mechanical electrical machinery including feasibility study of commercial ship service genset.
- (U) (\$10,986) Define multi-function radar-communication antenna system. Identify common platform for integrated topside design toolset implementation. Initiate development of integrated topside design toolset. Develop preliminary design concepts for integrated topside design prototype components. Develop and initiate validation of composite design procedures. Evaluate composite materials for their corrosion control and reduced maintenance attributes. Transition signature requirements and goals into concept formulation for HM&E elements, aviation

systems, etc. Continue computer, testing, and scale modeling signature assessments. Assess major signature component tradeoffs and begin formulation of detailed specifications for topside components.

4. (U) FY 1999 PLAN:

- (U) (\$941) Continue development of improved HM&E auxiliary components for improved maintenance and reliability. Complete ship service genset feasibility study.
- (U) (\$13,885) Continue development of integrated topside design toolset. Initiate fabrication concepts of integrated topside surface ship prototype components. Continue development and validation of composite design procedures. Consider composite materials for their corrosion control and reduced maintenance attributes. Conduct advanced engineering analysis and article testing for reduced signature topside features and components. Produce advanced computer and scale modeling predictions for detailed components and basic ship arrangements. Produce specifications and drawings for reduced signature topside components.

(U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: The advanced development of equipment/systems/engineering data and full scale weapons effects simulation will provide protection of ships and their personnel from conventional weapon effects, and enable the ship to continue performing assigned missions at an effective level. This program is also concerned with the effects of fire, smoke, and lethal environments created by peacetime accidents and the development of fire protection and damage control capabilities necessary to limit, control, and correct wartime and peacetime casualty situations.

(U) Starting in FY 1998, P.E. 0603514N/S1121 efforts transition to P.E. 0604516N/S2054, Integrated Fire Protection/ Damage Control. This zero-sum realignment is required since future work in this area will be primarily engineering/ manufacturing development and T&E, vice demonstration and validation.

(U) JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under DEMONSTRATION & VALIDATION because it develops and integrates hardware for experimental tests related to specific ship or aircraft applications.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This project supports the development of protection concepts, specifications, and standards to meet objectives of OPNAVINST 9070.1, "Survivability Policy for Surface Ships of the U.S. Navy", dtd 23 Sep 1988. Specifically, combatants must be able to deal with the degrading effects of damage from anti-ship missiles (ASMs), torpedoes, and mines. Additionally, the lessons learned from the Persian Gulf experience demonstrated the need to: (1) improve the resistance of the hull girder and equipment/ systems against underwater explosion (UNDEX) shock and whipping effects, and (2) provide uninterruptible shipboard power to ensure continuous combat capability.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$800) Completed dynamic verification testing of UNDEX resistant hull girder designs. Developed preliminary design guidance manual.
- (U) (\$1,315) Designed and fabricated a prototype Advanced Ship Shock Isolation Systems Technology (ASSIST) mount capable of supporting 3000 lbs (3 KIPS) of electronic equipment. Initiated full scale UNDEX shock testing to demonstrate the ability to protect a suite of commercial electronic equipment installed on a floating raft; designed and constructed raft. Initiated total-ship systems integration and producibility studies to define outfitting and structural construction procedures.

1. (U) FY 1996 ACCOMPLISHMENTS: (Cont.)

- (U) (\$772) Initiated development of Integrated Magazine Protection Systems (IMPS) to reduce the vulnerability of a magazine to mass detonation by integrating anti-fratricide shielding to prevent sympathetic detonation, explosion suppression systems to contain any munitions reaction within the magazine boundary, and blast and fragment tolerant magazine boundaries. Defined IMPS options to support identification of ship/ magazine interface requirements.

2. (U) FY 1997 PLAN:

- (U) (\$ 150) Finalize UNDEX resistant hull girder design manual.
- (U) (\$1,159) Complete UNDEX shock testing of 3 KIP ASSIST mount; prepare design drawings and ship design procedures. Complete systems integration and producibility studies. Initiate development of prototype ASSIST mount for protecting commercial machinery.
- (U) (\$ 868) Conduct scaled weapon effects tests of IMPS concepts to evaluate the effectiveness of water to suppress detonation effects. Conduct ship producibility studies to identify cost effective integration approaches.
- (U) (\$ 18) Portion of extramural program reserved for Small Business Innovation Research assessment in accordance with 15 U.S.C.638.

PROGRAM ELEMENT TITLE: Ship Combat Survivability

PROJECT TITLE: Combat Survivability Design

3. (U) FY 1998 PLAN:

- (U) (\$1,059) Fabricate a prototype ASSIST machinery mount; develop design drawings and ship design procedures. Initiate full scale UNDEX shock demonstration tests employing ASSIST mounts, raft, and commercial machinery.
- (U) (\$1,003) Initiate full scale proof-of-concept IMPS demonstration tests employing multiple missiles, magazine and ship structure, threat stimuli, anti-fratricide shielding, and explosion suppression system; construct full scale structural models.

4. (U) FY 1999 PLAN:

- (U) (\$1,099) Conduct full scale UNDEX shock demonstration tests of ASSIST machinery mounts, raft, and commercial machinery.
- (U) (\$1,017) Conduct full scale IMPS demonstration tests employing a shaped charge jet as the threat stimuli, initiating multiple warhead detonations. Develop preliminary ship installation design standards and drawing.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: The Persian Gulf war lessons-learned highlighted the threat to ship s mission caused by fire, smoke, and flooding following an attack, and the need to execute more organized and effective DC actions. Additionally, the inability to rapidly restore vital hull, mechanical, and electrical (HM&E) systems following damage was also addressed.

(U) In that context, including peacetime lessons-learned, this project supports the development and evaluation of systems to enable the ship and crew under reduced manning to contain damage to the primary damage zone, and rapidly restore vital HM&E systems, providing for recovery of mission capability. System development areas include: 1) computerized information management (IM) to collect, analyze, and display, in real-time, key data on ship status and recommended DC actions for restoring vital HM&E services, 2) active and passive fire protection systems, and 3) advanced DC training systems which account for all aspects of combat induced damage, decision making in high stress environments, and recovery/restoration.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$290) Completed full scale fire tests of selected shipboard compartments and prepared material performance specification.

UNCLASSIFIED

PROGRAM ELEMENT TITLE: Ship Combat Survivability PROJECT TITLE: Fire Protection/Damage Control Systems

1. (U) FY 1996 ACCOMPLISHMENTS (Cont d)
 - (U) (\$705) Prepared final specification for fixed fine water mist fire extinguishing system.
 - (U) (\$590) Continued development of the time-dependent Ship Vulnerability Model (SVM) dynamic electrical model.
 - (U) (\$440) Completed ship-based evaluation of preliminary Real-Time Stability Status (RTSS) software module.
 - (U) (\$415) Continued structural assessment software module development for the computer-based Damage Control System (DCS).
 - (U) (\$190) Updated ship vulnerability assessment software which identifies inactivated equipment as a function of threat to allow for more rapid and efficient program execution.
 - (U) (\$799) Completed full scale repair party damage control tests aboard the ex-USS SHADWELL.
 - (U) (\$595) Completed development of interactive training system for the Repair Locker Leader (RLL).
 - (U) (\$555) Provided technical and logistic support assessments for existing damage control/firefighting equipment and systems.
 - (U) (\$115) Developed a survivable damage control sensor architecture design that identifies the primary damage zone and tracks fire and smoke progression in real-time. Initiated integration into DCS to display sensor data.

PROGRAM ELEMENT TITLE: Ship Combat Survivability

PROJECT NUMBER: S1565

PROJECT TITLE: Fire Protection/Damage Control Systems

1. (U) FY 1996 ACCOMPLISHMENTS: (Cont.)

- (U) (\$443) Initiated development of a DCS firemain reconfiguration management module that supports rapid isolation and restoration following a rupture. Evaluated system options including sensors that identify the location of a rupture, and software that provides valve isolation sequencing logic.
- (U) (\$473) Initiated development of a DCS systems reconfiguration management software module that provides recommended actions (decision aid) for rapid restoration of combat system auxiliary support (HM&E) services (e.g., electrical, chilled water, electronic cooling water, and seawater cooling). Prepared software development plan. Identified HM&E/CS integration options for the effective exchange of equipment status data between HM&E and combat systems (CS) computers.
- (U) (\$276) Initiated assessment of current magazine sprinkler systems to provide sufficient cooling to prevent deflagration under combat threat conditions. Specifically, investigated external fire threats raising the magazine air temperature above a critical level, and penetrating threats that initiate propellant burning.

2. (U) FY 1997 PLAN:

- (U) (\$410) Conduct shipboard T&E of final RTSS software module integrated with flooding sensors and tank level indicators.
- (U) (\$350) Complete prototype structural assessment module; conduct fleet evaluation.

PROGRAM ELEMENT TITLE: Ship Combat Survivability

PROJECT TITLE: Fire Protection/Damage Control Systems

2. (U) FY 1997 PLAN (Cont d):

- (U) (\$250) Complete integration of fire and smoke sensor data into DCS. Conduct full scale fire testing aboard ex-USS SHADWELL to demonstrate the ability to track fire in real-time.
- (U) (\$350) Continue development of a DCS firemain reconfiguration management module. Conduct land-based T&E of sensor option; develop specification.
- (U) (\$475) Continue development of DCS systems reconfiguration management software. Select HM&E/CS integration approach; develop software requirements and initiate coding for a chilled water system reconfiguration decision aid.
- (U) (\$1,000) Conduct fleet evaluations aboard the ex-USS SHADWELL to evaluate the effectiveness of DCS in reducing the number of personnel devoted to communications and plotting; and develop shipboard procedures for the on-scene leader in support of rapid battle damage assessment and prioritization.
- (U) (\$550) Complete development of SVM dynamic electrical model. Initiate development of fire and smoke spread model.
- (U) (\$571) Initiate development of an interactive training system for improving interdepartmental coordination between RLL and the Damage Control Assistant (DCA).
- (U) (\$200) Complete assessment of current magazine sprinkler systems. Develop performance-based specification.
- (U) (\$19) Portion of extramural program reserved for Small Business Innovation Research assessment in a ordnance with 15 U.S.C.638.

PROJECT TITLE: Fire Protection/Damage Control Systems

3. (U) FY 1998 PLAN:

- (U) (\$400) Integrate RTSS software module with DCS to allow stability data to be presented from the DCS console.
- (U) (\$400) Develop training curriculum for the DCS structural assessment module and finalize software based on fleet lessons learned.
- (U) (\$400) Initiate development of firemain valve isolation sequencing logic software that will recommend valves to close to isolate a break; develop software specification.
- (U) (\$900) Complete chilled water system reconfiguration decision aid and initiate electrical system reconfiguration decision aid. Initiate land-based tests to demonstrate the transfer of combat system equipment status data to DCS for use in prioritizing HM&E restoration actions.
- (U) (\$1,188) Conduct fleet evaluations aboard the ex-USS SHADWELL to demonstrate the effectiveness of active reduced manning damage control concepts in responding to a major casualty; develop shipboard procedures.
- (U) (\$600) Complete interactive training system for the RLL and DCA. Initiate development of a DC Command Team Trainer for improving total-ship coordination between the DCA, Engineering Officer of the Watch (EOOW), and the Combat Systems Officer of the Watch (CSOOW) in support of rapid mission restoration.
- (U) (\$600) Complete development of SVM fire and smoke model.
- (U) (\$500) Initiate development of an intelligent ventilation and fixed fire suppression system control capability for containing fire and smoke remotely from the Damage Control Central (DCC) DCS computer console.

4. (U) FY 1999 PLAN:

- (U) (\$750) Complete development of the firemain valve isolation sequencing logic software and initiate demonstration aboard the ex-USS SHADWELL, employing a fully operational firemain, sensors, remotely actuated valves, and simulated ruptures.
- (U) (\$1,150) Complete electrical system reconfiguration decision aid software coding. Complete land-based demonstration tests of combat system equipment status data transfer to DCS; develop DCS/ CS interface standard.
- (U) (\$600) Develop a crew casualty/ damage control model for the SVM that supports ship designs by predicting crew casualties as a result of initial damage and the capability of personnel to take necessary actions to contain damage/ restore mission capability.
- (U) (\$1,227) Conduct fleet evaluations aboard the ex-USS SHADWELL in support of developing shipboard procedures for firefighting in a chemical, biological, and radiological (CBR) environment.
- (U) (\$900) Continue development of the interactive DC Command Team Trainer.
- (U) (\$1,025) Continue development of a remote firefighting capability from DCC. Evaluate sensor and architecture options aboard the ex-USS SHADWELL; develop system requirements.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: Project S1830 coordinates all Navy efforts for the development of nuclear radiation detection devices in direct support of the Navy Nuclear Propulsion Program and other users by providing accurate, reliable Health Physics instrumentation at the lowest possible life-cycle cost. Reliable radiation monitoring instruments are needed to ensure the radiological safety of Navy personnel. This includes hand-held RADIAC meters, personnel dose measurement devices, and area monitors used to measure radiation fields. The Laser Heated Thermoluminescent Dosimetry (LHTLD) System will be able to meet new NRC regulations and will provide sensitive measurements down to the levels required to meet all new and imminent health and safety requirements. The Multifunction RADIAC will cut calibration costs by up to 75% and reduce the requirements for spare parts by 85% by replacing over 60 different models of obsolete equipment. This project has a 5 to 1 payback ratio. New requirements for the measurement of lower neutron levels necessitate the development of modernized instrumentation. The program is critical to joint-service radiation safety initiatives within DOD and has been coordinated with Army, Air Force, and Defense Nuclear Agency personnel to achieve the maximum cross-service applicability. All OR's issued 25 Aug 1987.

- Multifunction RADIAC (MFR), OR #176-04-86
- Laser Heated Thermoluminescent Dosimetry (LHTLD) System, OR #180-04-87
- Neutron Dosimetry System, OR #179-04-87
- Automated RADIAC Calibration and Diagnostics System, OR #175-04-86

(U) JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under DEMONSTRATION & VALIDATION because it develops and integrates hardware for experimental test related to specific ship or aircraft applications.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

(U) (\$2,306) Completed Engineering and Manufacturing Development (EMD) Phase III for LHTLD System. Continued development of Copper-doped Lithium dosimeter. Began development of proton recoil neutron dosimeter and beta dosimeter.

(U) (\$693) Continued development of plastic scintillation gamma probe and universal neutron/gamma probe. Began development of miniature beta interface. Completed alpha interface and small gamma probe.

(U) (\$85) Continued development of Casualty Dosimeter.

2. (U) FY 1997 PLAN:

(U) (\$2,156) Begin enhancements to LHTLD System. Continue development of LHTLD Dosimeters.

(U) (\$396) Continue development of MFR universal probe. Complete plastic scintillation and beta probes. Begin development of extendable gamma probe and flexible gamma probe.

(U) (\$60) Complete development of Casualty Dosimeter.

(U) (\$120) Resume development of Tritium Monitor and complete development of Underwater RADIAC.

(U) (\$37) Portion of extramural program reserved for Small Business Innovative Research assessment in accordance with 15 U.S.C. 638.

3. (U) FY 1998 PLAN:

(U) (\$1,675) Continue enhancements to LHTLD System. Continue development of LHTLD Dosimeters.

(U) (\$1,061) Complete development of MFR universal probe, flexible probe, and extendable probe. Begin development of remote detectors and MFR Large Scale Integrated (LSI) circuit boards.

(U) (\$294) Complete development of Tritium Monitor and begin development of Neutron Dosimetry System.

(U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This program develops surface anti-submarine warfare (ASW) combat system and acoustic silencing technology. The ASW Advanced Development Project provides the advanced development demonstration and validation of technology for potential surface sonar and combat system application. Efforts focus on resolution of technical issues associated with providing capability against the year 2000 and beyond threat with emphasis on shallow water/littoral area ASW. The surface ship acoustic quieting develops surface countermeasure acoustic silencing technology. In light of the sea mine threat, the surface ship acoustic quieting provides for the development and at-sea demonstration of quieting techniques to reduce surface ship active and passive sonar self-noise, ship radiated noise, and shipboard machine-generated airborne noise. Subprojects are directed toward increasing own ship survivability against a variety of acoustic threats, including acoustic quieting as a mine countermeasure and improving sensor performance by reducing the interference impact on our own force's sensors.

(U) JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under DEMONSTRATION & VALIDATION because it develops and integrates hardware for experimental test related to specific ship or aircraft applications.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This project provides the advanced development demonstration and validation of technology for potential surface sonar and combat system applications. Efforts focus on resolution of technical issues associated with providing capability against the year 2000 and beyond submarine threat with emphasis on shallow water/littoral area ASW. Key technology areas being investigated include active sonar transmissions, signal and information processing, active sonar classification, towed arrays and transducer technology, multi-static sonar, and multi-sensor data fusion. The major near-term effort is development of a mid-frequency Towed Active Receive Subsystem (TARS) prototype which will function as a deep receiver adjunct for the SQS-53 transmitter, thereby providing significantly enhanced submarine detection performance against deep submarine targets.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

(U) (\$4,412) TARS. Continued TARS towed array development, including validation of the telemetry design, and tow cable. Conducted the TARS towed array Critical Design Review (CDR) and completed TARS Critical Item Test (CIT). Conducted TARS telemetry down selection to build 200 channel telemetry kits.

(U) (\$500) Tactical Control. Migrated contact management activities to joint tactical control architecture and conducted laboratory performance evaluation. Performed warfare payoff, performance modeling, and operational evaluations.

(U) (\$320) Forward financing FY 1997 TARS requirements due to low execution rates.

DATE: February 1997

BUDGET ACTIVITY: 4 PROGRAM ELEMENT: 0603553N

PROJECT NUMBER: V1704

PROGRAM ELEMENT TITLE: Surface Anti-Submarine Warfare

PROJECT TITLE: ASW Advanced Development

2. (U) FY 1997 PLAN:

(U) (\$3,458) TARS. Complete development of TARS array components (array, towing system, receiver) and begin TARS integration. Conduct and evaluate results of initial at-sea demonstration on research vessel. Perform performance and operational modeling and analysis to derive top level USW measures of effectiveness (MOE) required to support SC-21 COEA mission definition. (1 October 1996 - 30 April 1997)

(U) (\$320) Forward financing FY 1998 TARS requirements due to low execution rates.

(U)(\$3) Portion of extramural program reserved for Small Business Innovation Research assessment in accordance with 15 U.S.C.638.

3. (U) FY 1998 PLAN:

(U) (\$4,048) TARS. Complete TARS integration. Complete array installation and conduct at-sea tactical system demonstration. Perform post sea test data analysis and provide support for transition to production under PMS411. (1 October 1997 - 30 April 1998)

(U) (\$672) Tactical Control. Update Tactical Control architecture and functional capabilities to account for surface ship requirements. Initiate development of contact management functionality to support TARS and SQQ-89. (1 October 1997 - 31 December 1997)

(U) (\$584) Passive Processing. Initiate adaptation of passive processing approaches developed under Advanced Submarine Combat Systems Development (P.E. 603504N, V0223) for use with surface towed arrays. Develop approaches for commonizing surface and submarine processing architectures. (1 October 1997 - 31 December 1997)

(U) (\$400) Requirements Engineering. Based on FY97 SC-21 top level USW MOE requirements, perform functional decomposition for LBVDS, Passive, Hull and other USW systems. Perform technology assessment and bottoms up verification of LBVDS and Hull Array technologies in support of functional decomposition. Begin incorporation of PEO(USW) and DON Modeling and Simulation (M&S) infrastructure. (1 October 1997 - 31 December 1997)

4. (U) FY 1999 PLAN:

(U) (\$1,000) Towed Systems (TARS). Complete post-test analysis and transition to production. (1 October 1998 - 31 December 1998)

(U) (\$1,551) Tactical Control. Continue development of Contact Management Enhancements to support TARS and AN/SQQ-89, Block III Upgrade. Incorporate 6.2 Development Products into TCS Common Architecture. Conduct Joint TCS sea test. Transition complete Contact Management Enhancements to TDSS. (1 October 1998 - 31 February 1999)

(U) (\$1,616) Signal Processing. Continue adaptation of passive processing approaches from Advanced Submarine Combat Systems Development (P.E. 0603504N, V0223) for use with surface towed arrays. Continue commonization of surface and submarine processing architectures. (1 October 1998 - 28 February 1999)

(U) (\$550) Requirements Engineering. Formulate Tactical Control systems engineering analysis model. Incorporate Surface Ship Torpedo Defense and ASW systems engineering analysis model in SC21 systems engineering baseline. Initiate SC-21 analyses for Hull and Towed Systems. Formalize and finalize Analytic baseline for systems engineering models. Continue incorporation of PEO(USW) and DON M&S infrastructure. (1 October 1998 - 31 December 1998)

(U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This program supports innovative research and development in submarine technologies and the subsequent evaluation, demonstration, and validation for submarine platforms. It will increase the submarine technology base and provide subsystem design options not currently feasible.

(U) Project S2033 identifies the most promising and emerging technologies and transitions them into specific demonstration/validation efforts. The project transitions technologies developed by Navy technology bases, the private sector, and the Defense Advanced Research Projects Agency (DARPA) Tactical Technology Office. Advanced systems developed under this program have potential for backfit into existing classes of submarines, supporting emerging requirements, and systems technologies insertion into future submarine designs. Research and development (R&D) investment factors used to select these technologies include: economic environment and return on investment; mission enhancement; and safety and survivability. The project also conducts an SSN Security Program (SSP) to develop techniques and devices that decrease the detection vulnerability of attack submarines, specifically operating in littoral environments; supports two Information Exchange Programs with the United Kingdom (UK), one on submarine electromagnetic silencing and the second on submarine platform equipment, systems and hull technology; operates the Large Scale Vehicle (LSV) to provide at-sea test capability for propulsor, acoustic and non-acoustic signature reduction, remote vehicle R&D, and large scale hydrodynamic experimentation; operates the Integrated Measurement System (ISMS) in support of structural acoustics technology development; operates the

Hydrodynamic/Hydroacoustic Technology Center (H/HTC) to enhance our ability to accurately, computationally predict hydrodynamic and hydroacoustic performance of submerged bodies; and provides life cycle support for the R&D Submarine modifications.

(U) Project S2034 provides resources to convert an attack submarine to a dedicated R&D platform without loss of mission capability. This project provides a dedicated at-sea platform for testing and evaluating advanced systems technologies applicable to existing and the next generation SSN.

(U) Project F2177 is dedicated to the New Attack Submarine (New SSN). The primary goal of the project is to develop affordable yet capable submarine platform specific systems by evaluating a broad range of system technology alternatives and examining cost reduction, producibility improvement, and technical risk reduction.

(U) JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under DEMONSTRATION & VALIDATION because it develops and integrates hardware for experimental tests related to specific ship or aircraft applications.

PROJECT TITLE: Advanced Submarine
Systems Development

(U) (\$8,456) Infrastructure: Continued operations and support for the LSV (testing candidate propulsors for New SSN, large scale hydrodynamic studies, and propulsor advanced technology demonstration). Continued operations and support for the H/HTC including hardware/software maintenance and hardware upgrades.

(U) (\$23,814) Continued development of modeling and simulation procedures to address hydrodynamic issues integral to operational submarines and future ship designs (e.g., code certifications and design tool integration). Continued identification and feasibility assessments for integrated stern/main propulsion electric drive concepts and configuration. Initiated technology development plans for technology gaps and shortfalls detected during feasibility assessment. Continued development, fabrication, and testing of prototype composite main propulsion shaft. Continued ONR-NAVSEA jointly funded AVR program with completion of land based testing. Continued development of the arc fault prevention program. Continue development and testing of shock and acoustic isolation devices. Accomplished at-sea proof of concept test of DARPA radiated noise project F. Continued demonstration/validation phase of the electromagnetic silencing program and with the UK, commissioned the mobile deep range. Transitioned these programs to PE 0604558N. Commenced advanced sail concept exploration. Continued to refine elastomeric disk design and fabricated and tested additional disks.

(U) (\$889) \$2866 FY95 forward funded for FY96: Continued development of Situational Awareness System (SAS) sensors for, and characterization and operational assessment of, SSN operations in littorals. Conducted SAS Sea Test I.

(U) (\$9,341) Funded implementation of submarine superiority initiatives for towed and sphere array related advanced processing build, development and evaluation. Established data gathering and librarian function in support of developing comparative performance assessment capability based on availability of common at-sea data base.

(U) (\$50) Funded enhanced fiber optically guided missile (EFOG-M) cost benefit study. This project leveraged off the Army's EFOG-M program with the intent to provide submarines with the capability to destroy helicopters, small patrol craft, and slow moving aircraft at tactically significant ranges.

(U) (\$1,200) N875 SSBN Security effort.

FY 1998/FY 1999 RDT&E,N BUDGET ITEM JUSTIFICATION SHEET

DATE: February 1997

BUDGET ACTIVITY: 4

PROGRAM ELEMENT: 0603561N

PROJECT NUMBER: S2033

PROGRAM ELEMENT TITLE: Advanced Submarine
System Development

PROJECT TITLE: Advanced Submarine
Systems Development

2. (U) FY 1997 ACCOMPLISHMENTS:

(U) (\$1,692) Continue concept integration studies (e.g., active control systems interaction/integration study; stealth histories; Secretary of Defense Report on Nuclear Attack Submarine Procurement and Submarine Technology selected Appendix C technologies cost benefit studies).

(U) (\$12,682) Continue operations and support for the LSV. Complete support for test and demonstration of the advanced hybrid advanced technology demonstration. Complete support for test and demonstration of the non-acoustic detection and signature reduction program called Standard Crimson. Conduct unmanned undersea vehicle support experiments, continue large scale hydrodynamic studies. Continue operation and support for the H/HTC including hardware/software maintenance and hardware upgrades. Initiate operation of the ISMS. Commence life cycle support for the R&D Submarine modifications (transitioned from PE 0603561N/S2034).

(U) (\$20,687) Continue development of modeling and simulation procedures to address hydrodynamic issues integral to operational submarines and future ship designs (e.g., code certifications and design tool integration). Continue identification and feasibility assessments of HM&E component technologies related to main propulsion electric drive. Commence proof of concept hardware demonstration for scaled models of HM&E components for the development of electric drive technology. Commence demonstration and validation efforts for critical assessment tools using scale models. Complete demonstration/phase of the arc fault prevention program. Transition programs to PE 0604558N. Complete fabrication of the composite shaft. Install AVR system on USS BOISE (SSN 764) and conduct at-sea system evaluation thereby completing the ONR-NAVSEA jointly funded program. Complete Project F. Complete development and testing of shock and acoustic isolation devices and integrate into the specifications and design of the New SSN. Commence development and design of a rim driven main seawater pump. Complete concept downselect and design.

(U) (\$3,304) Conduct SAS and Tactical Decision Aids for Submarine Security (TDASS) modeling and investigations, assess tactical utility of environmental sensors, develop littoral area operations and environment characteristics, tactics and countermeasures. Initiate planning for SAS Sea Test II. Program management responsibility continues under PEO-USW.

BUDGET ACTIVITY: 4

PROGRAM ELEMENT: 0603561N

PROJECT NUMBER: S2033

PROGRAM ELEMENT TITLE: Advanced Submarine
System Development

PROJECT TITLE: Advanced Submarine
Systems Development

(U) (\$3,150) Provide funding for at-sea technical and tactical evaluation of the Total Ship Monitoring SSN Advanced Development Model System. Continue development of system enhancements/refinements based on ongoing test results. PEO USW has program management responsibility.

(U) (\$4,618) Continue demonstration and validation of the elastomeric ejection system. Continue elastomeric disk design. Fabricate additional disks and test. Continue the previously ONR funded Advanced Hybrid Propulsor project developing a new concept propulsor which provides improved affordability and maintainability over current advanced propulsor configurations, while maintaining or improving acoustic and hydrodynamic performance. Small scale model testing will be used to evaluate powering, maneuvering, cavitation and acoustics performance.

(U) (\$13,200) Initiate development of an advanced sail concept to exploit shaping and materials to improve ship hydrodynamics, add additional volume for mission capability enhancements, and reduce the ship's acoustic and non-acoustic signatures. Initiate development and demonstration of improved acoustic isolation using active or hybrid (active/passive) isolation systems. Initiate development and demonstration of innovative submarine internal structural designs to increase isolation of acoustic energy to/from machinery, electronics, and habitability spaces. Pursue evaluation and development of mission and future design. Initiate development of technologies that influence hydrodynamic performance - specific areas include hull and appendage flow dynamics and visualization techniques, maneuvering control, stability and recovery, and self-noise.

(U) (\$1,000) Fund, at Congressional direction, Doppler Sonar Velocity Log.

(U) (\$1,287) Portion of extramural program reserved for Small Business Innovation Research (SBIR) assessment in accordance with 15 U.S.C.638.

3. (U) FY 1998 PLAN:

(U) (\$2,067) Continue concept integration studies (e.g., Secretary of Defense Report on Nuclear Attack Submarine Procurement and Submarine Technology selected Appendix C technologies cost benefit studies).

PROJECT TITLE: Advanced Submarine
Systems Development

(U) (\$13,200) Continue operations and support of the H/HTC including hardware/software maintenance and hardware upgrades. Continue life cycle support for the R&D Submarine modifications (transitioned from 0603561N/S2034). Continue operations and support for the LSV. Conduct restricted availability to modify the vehicle to replicate the New SSN. Upgrade the radiated noise range and analysis equipment, and install new battery charger. Conduct first New SSN propulsor performance validation trials. Continue large scale hydrodynamic studies. Continue operations of the ISMS.

(U) (\$20,300) Continue development of modeling and simulation procedures to address hydrodynamic issues integral to operational submarines and future ship designs (e.g., code certification and design tool integration). Continue identification and feasibility assessments of HM&E component technologies related to main propulsion electric drive. Continue proof of concept hardware demonstration for scaled models of the main propulsion electric drive component technologies. Continue scale model and tool development, demonstration and validation. Identify larger scales required to provide proof of concept. Begin design, build and test of critical components such as the motor, motor controller, and advanced materials. Begin manufacture of rim driven main seawater pump hardware.

(U) (\$4,000) Continue development of SAS sensors, TDASS modules, characterization of operations and environment, tactics and countermeasures for littoral areas. Conduct SAS Sea Test II.

(U) (\$7,000) Continue EES demonstration and validation and EES second generation elastomer disk life cycle test. Continue developing a new concept propulsor which provides improved affordability and maintainability over current advanced propulsor configurations, while maintaining or improving acoustic and hydrodynamic performance. Small scale model testing will be used to evaluate powering, maneuvering, cavitation and acoustics performance. Fabricate 1/4 scale candidate configurations.

(U) (\$11,500) Continue development of an advanced sail concept to exploit shaping and materials to improve ship hydrodynamics, add additional volume for mission capability enhancements, and reduce the ship's acoustic and non-acoustic signatures. Continue development and demonstration of improved acoustic isolation using active or hybrid (active/passive) isolation systems. Continue development and demonstration of innovative submarine internal structural designs to increase isolation of acoustic energy to/from machinery, electronics, and habitability spaces.

(U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: The Submarine Tactical Warfare Systems program element is comprised of the Advanced Submarine Support Equipment Program and the Submarine Special Operations Support Development Program. The overall goal of the program is to improve submarine operational effectiveness through the development of advanced Research and Development (R&D) and Electronic Support Measures (ESM) technologies. The goal of the Advanced Submarine Support Equipment Program (ASSEP) is to increase submarine operational effectiveness through improvements in electronic warfare (i.e., threat warning, over-the-horizon targeting, and expanded tactical reconnaissance). A continuing need exists to improve submarine capabilities in the increasingly dense and sophisticated electromagnetic environment caused by the proliferation of complex radar, communications, and navigation equipment of potential adversaries. The Submarine Special Operations Support Development program responds to the increased threat of Naval activity in the Littorals and the continuing threat of submarine and surface ship activity in regions of the world through the development of advanced submarine R&D technology to provide improved operational capability in shallow water regions. Particular emphasis is placed in the areas of sonar operability and maintainability, Littoral operations, mine warfare, tactical surveillance, and other submarine support missions. Efforts include assessment of combat system effectiveness, development of Arctic shallow water specific improvements for existing sonars, development of class specific Arctic operational guidelines and the testing of ice-capable submarine support structures. This program also provides the framework for various R&D programs to conduct Test and Evaluation in shallow water and Arctic regions.

(U) JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under DEMONSTRATION & VALIDATION because it develops and integrates hardware for experimental test related to specific ship or aircraft applications.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This program develops submarine ESM equipment technology. A continuing need exists to improve submarine capabilities in these areas to enhance operational effectiveness in the increasingly dense and sophisticated electromagnetic environment caused by the proliferation of complex radar, communications, and navigation equipment of potential adversaries. Improvements are necessary for submarine ESM to be effective in conducting the following mission areas: Joint Littoral Warfare, Joint Surveillance, Space and Electronic Warfare, Intelligence Collection, Maritime Protection and Joint Strike. Specific efforts include development of: Radar Cross Section Reduction (RCSR) Techniques, Periscope Monopulse Direction Finding (MDF) System, Sensor Technology Insertion Program (STIP), and ESM Technology Insertion Program (ESMTIP). The RCSR evaluates the vulnerability of submarine masts, periscopes and sensors to radar and infrared threats and evaluates the state of the art in radar absorbent material, resulting in potential periscope/mast engineering improvements to reduce the counter-detection threat. The MDF system is an improvement to the Type 18 Periscope which will allow the ESM system to discriminate and identify complex radar signals using direction of arrival as a primary sorting parameter. The STIP and ESMTIP programs develop submarine unique improvements to mast, periscope and hull mounted ESM electromagnetic and electro-optic sensors based on emerging technologies that are available from DOD Exploratory Development Programs, industry Independent Research and Development, and other sources. Feasibility demonstration models (FDMs) are developed to provide a realistic method of evaluating the improvements, including deployment on submarines for testing. STIP projects include: Laser detection and warning; radio frequency (RF) extensions; RF bandwidth improvements; passive localization; upgrades to the Photonics Mast sensors and software; and advanced antenna arrays for beam steering and high resolution direction finding enhancements.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: ESMTIP projects include: improvements to signal sorting and recognition methods to support classification and identification of ESM contacts encountered during Littoral operations;

Equipment Program

signal processing improvements for processing of low probability of intercept signals; voice/language recognition and human/machine interface (HMI)enhancements. Starting in FY 95 all programs funded in this project are non-acquisition category programs in accordance with NAPDD # 428-87.

1. (U) 1996 ACCOMPLISHMENTS:

- (U) (\$220) Continued RCSR techniques and materials investigation. Funds were obligated 10/95.
- (U) (\$497) Completed Periscope MDF FDM development. Funds were obligated 11/95.
- (U) (\$1,460) Continued STIP. Initiated development of Laser Warning Receiver FDM. Funds were obligated between 10/95 and 9/96.

2. (U) FY 1997 PLAN:

- (U) (\$45) Continue RCSR techniques and materials investigation. Funds were obligated 10/96.
- (U) (\$2,239) Continue STIP. Continue development of Laser Warning Receiver FDM. Initiate development of a shock hardened radome for the ESM antenna. Update simulation tools. Funds will be obligated between 10/96 and 9/97.
- (U) (\$40) Portion of extramural program reserved for Small Business Innovation Research assessment in accordance with 15 U.S.C. 638.

3. (U) FY 1998 PLAN:

- (U) (\$110) Continue RCSR techniques and materials investigation. Funds will be obligated between 10/97 and 11/97.

(U) (\$2,502) Continue STIP. Complete at sea testing of Laser Warning Receiver FDM. Complete development of a shock hardened radome for the ESM antenna . Complete updating simulation tools. Funds will be obligated between 10/97 and 12/97.

4. (U) FY 1999 PLAN:

(U) (\$233) Continue RCSR techniques and materials investigation. Funds will be obligated between 10/98 and 11/98.

(U) (\$2,335) Continue STIP. Complete development of Laser Warning Receiver FDM. Begin development of Passive Localization FDM. Begin development of Photonics Mast Auto Target Recognition and Tracking algorithms. Funds will be obligated between 10/98 and 12/98

(U) (\$ 907) Initiate ESMTIP. Begin development of Low Probability of Intercept (LPI) processing algorithms and HMI design enhancements. Funds will be obligated between 10/98 and 12/98

(U) CHANGE SUMMARY EXPLANATION:

(U) Funding: The \$134K decrease in FY 1996 is due to Below Threshold Reprogrammings (\$-101K), Jordanian Recission (\$-2K), and SBIR assessment (\$-31K). The \$116K decrease in FY 1997 is due to undistributed Congressional reductions. The \$1.1M decrease in FY 1998 and \$1.1M decrease in FY 1999 is a result of NWCf rate/carryover adjustments, an Acquisition Center of Excellence assessment, funding for the Acquisition Desk Book, Inflation, and NWCf R&D Actuals.

(U) Schedule: Initiation of STIP Photonics Mast Auto Target Recognition and Tracking algorithms and the ESM TIP LPI signal processing algorithms and HMI design enhancements is deferred.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This program responds to the increased threat of Naval activity in the Littoral and the continuing threat of submarine and surface ship activity in all regions of the world through the development of advanced submarine operational concepts. It places particular emphasis on submarine operability and mission support in unique environments. Efforts include assessment of combat system effectiveness, use of high frequency sonars in Arctic regions, testing of ice-capable submarine structures, and development of class specific Arctic shallow water operational guidelines. This program also provides the framework for various Research and Development (R&D) programs to conduct Test and Evaluation in the shallow water and Arctic regions.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$3,256) Continued development of the Passive Subsurface Topographical Defense and Navigation System Submarine Tactical Navigation System.
- (U) (\$2,554) Conducted/supported an Arctic Science Exercise, ICEX 1-96 and ICEX 2-96.
- (U) (\$65) Provided updates to the Naval Warfare Publications concerning routine and emergency under-ice surfacing operations

2. (U) FY 1997 PLAN:

- (U) (\$2,018) Conduct/support an Arctic Science Exercise and plan for ICEX 1-98.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: The efforts within this PE directly support the Navy's ability to design more affordable ships with reduced manning, increased producibility, and greater utilization of the latest technology. The program directly supports the Navy Shipbuilding Plan with state-of-the-art design tools and methods for ship studies, and the actual conduct of design concept studies for the ships in that plan. The program provides the foundation for affordable surface ship design, construction, and life cycle support and is a required first step in the integration of total ship systems, including combat systems and hull, mechanical and electrical (HM&E) systems. Inadequate early planning and ship concept formulation can result in down-stream design/construction and operational problems. A more subtle and severely negative impact of neglecting this early effort is that the "best" concepts may never even be considered and our greatest potential ship design advances never realized. Designs and technologies must meet the threat. This project supports this requirement. While these efforts support all surface ship acquisition programs, they are not in direct support of specific authorized shipbuilding programs. Computer modeling and simulation developments will permit virtual operation and evaluation of the ship and enable reduction of ship production and support cost by allowing fleet representatives, shipbuilders and maintenance staffs to build, test, operate or repair the ship "in the computer" at a design stage where the design is flexible and where feedback and suggested changes can be incorporated relatively easily. A key affordability concept of future designs is a use of common modules, comprised of standard components and/or standard interfaces. These modules will be used across ship types and will be integral with equipment standardization and distributed system architectures that support generic build strategies. Increased commonality will reduce the total cost of ownership and is the cornerstone of an affordable fleet. Efforts under Project S2196 transfer directly to early stage ship design in PE 0603564N, Ship Preliminary Design and Feasibility Studies. This project is the only R&D effort (Government or commercial) that supports this country's naval ship design and engineering capabilities in the area of early stage (Feasibility through Contract Design) design tools, criteria, and methods.

UNCLASSIFIED

UNCLASSIFIED

FY 1998/FY 1999 RDT&E,N BUDGET ITEM JUSTIFICATION SHEET

DATE: February 1997

BUDGET ACTIVITY:4 PROGRAM ELEMENT: 0603563N

PROJECT NUMBER: S2196

PROGRAM ELEMENT TITLE: Ship Concept Advanced Design

PROJECT TITLE: Design Tools, Plans & Concepts

(U) This project accomplishes the following: (1) identifies future surface ship requirements and characteristics necessary to meet future threats and support mission needs; (2) investigates new affordable ship concepts and evaluates technologies necessary to support these concepts; (3) provides design methods and automated design tools to develop and evaluate ship concepts, support early ship design, and solve pressing fleet engineering problems; (4) develops design criteria and common standards to improve affordability; (5) improves the quality of the product in the design phases, to reduce or eliminate the costs of fixing problems after ships reach the fleet; (6) develops investment strategies for new concepts and technologies; (7) and supports development of Mission Need Statements (MNS) for future ships.

(U) In FY 1996, funding was re-programmed into this PE/Project for Large Cruise Missile Carrier (LCMC) / Arsenal Ship demonstrator concept efforts. The Arsenal Ship project has two major phases: (1) development of a Demonstrator Ship using R&D funds and (2) a subsequent SCN-funded program of multiple fleet ships commencing as soon as FY 01. The Demonstrator Ship is a prototype used to establish the proof-of-principle for high fire-power, low manning strike mission ships. The Chief of Naval Operations has directed that the Demonstrator Ship start at-sea testing prior to award of the first SCN ship. The schedule requires a Functional Design phase in FY 97 detail design, construction starting in FY 98, and at-sea tests and trials starting in FY 00. FY 97 efforts are funded under PE 0603582N. FY 98-00 efforts are funded under PE 0604310N.

(U) In FY 1996, Congress added funding for Landing Craft, Air Cushion (LCAC) Service Life Extension Program (SLEP), to this PE/Project, for advance planning and engineering efforts. Modifications are to be incorporated into craft 91 in production.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$785) Integrated new technologies in total ship concepts. Developed ship concepts for potential ships 5-10 years out in the SCN plan, including ship size, configuration, capabilities and rough order of magnitude (ROM) ship costs. Conducted pre-Milestone 0 ship concept studies for combat logistics force, amphibious assault, mine countermeasure support, and large cruise missile carrier surface combatant ships. Analyzed the cost/benefit of new concepts and technologies.

DATE: February 1997

BUDGET ACTIVITY:4 PROGRAM ELEMENT: 0603563N

PROGRAM ELEMENT TITLE: Ship Concept Advanced Design

PROJECT NUMBER: S2196

PROJECT TITLE: Design Tools, Plans & Concepts

- (U) (\$1,563) Continued development and improvement of design methods, criteria, standards and data bases. Continued improvements to surface ship synthesis/assessment models. Added capability to address reduced construction cost, and increased capabilities to determine ship size impacts of new technologies. Included the lessons learned from ship modularity, production, and commonality of H,M&E systems studies done in previous FYs. Continue improvements to ship cost estimating models. Continued supporting development of advanced computer aided design methods and tools for early stage ship design, including simulation based design techniques. Identified, characterized and assessed new and emergent technologies and update the HM&E technology database.
- (U) (\$1,563) Continued obtaining long-term data collection of full-scale seaway hydrodynamic loads. Initiated development of slam pressure algorithms and associated strength considerations. Finalized stiffener strength variable and distribution development to augment reliability assessments. Continued component fatigue strength evaluations and initiate fracture toughness assessment formulation. Began validation studies of analytical based loads predictions. Finalized ship fabrication and material strength variable definition and development of probability distributions. Completed stiffener local instability tests. Developed hull girder bending (part I) of the reliability-based load and resistance factor design (LRFD) structural rules for naval surface ships. Supported Ship Structure Committee (SSC) Research.
- (U) (\$1,683) Developed additional elements of the EM Engineering Baseline II system. Released EM Engineering interim Baseline I+. Completed microwave EM environment predictive techniques, and continue transition frequency prediction development. Developed and installed modules to address composite and frequency selective surfaces. Continued Baseline II electro-optics and millimeter wave analysis development. Brought on-line a prototype Baseline II high frequency (HF) EM environment workstation that operates in parallel with scaled "brass model" tests. Finalized the architectural design for the Baseline II version of the EM Engineering system.

BUDGET ACTIVITY:4 PROGRAM ELEMENT: 0603563N

PROJECT NUMBER: S2196

PROGRAM ELEMENT TITLE: Ship Concept Advanced Design PROJECT TITLE: Design Tools, Plans & Concepts

- (U) (\$10,244) Continued to identify and develop areas/methods for increased commonality for naval ships and ship systems to improved life cycle affordability. Continued development of common ship architectures for hull, mechanical and electrical (HM&E) systems, and related command, control, communications, computers and information (C4I) systems, and combat systems (C/S) as well as development of associated common module prototypes and designs to demonstrate more cost-effective design, fabrication, shipbuilding processes and operational utility. Emphasis was on development of ship configurations and systems architectures that can utilize commercial processes and/or commercial-off-the-shelf (COTS) equipment and materials. Developed total ship concepts for modular surface combat ships and combat logistics support ships. Continued development of common berthing modules, damage control locker modules, food service (galley) module, rolling airframe missile (RAM) modules, and radio communication system equipment modules. Continued development of module concepts identified as architectural building blocks efforts, including ship auxiliary system modules, and ship self defense combat systems modules. Prepared for shock test of the modular 5-inch gun system in conjunction with DoD Foreign Comparative Test (FCT) program. Continued work on modular track/hold down systems and in compartment support systems (i.e. modular electrical connections) for use in mounting standardized and modular equipment aboard ships in C4I and other types of spaces to reduce the future costs of ship equipment/ system modernization. Supported prototype installations on fleet ships to demonstrate these track hold down systems and common/standard foundation connections. Continued development of specifications, standards, and practices for implementing use of common modules, standard components and standard interfaces. Continued development and definition of common module standard interfaces. Continued efforts on more cost effective methods and practices to standardize shipboard equipment for life cycle cost savings. Completed first phase of engineering efforts on across program / fleet common equipment. Completed systems engineering analysis (including cost analysis) to identify/develop the families of modules as the building blocks of the future surface Navy, including configuration control requirements. Continued development of alternative distributed systems architectures for HVAC, air systems and fluid transfer systems that foster improved ship production and total life cycle ship affordability. Completed the first phase of development for the PODAC cost model using a Navy / shipbuilder team. Continued development of generic and engineered build strategies for naval ships that foster product-oriented ship design and construction, and incorporate common system architectures and modules. Completed module and equipment standardization efforts for inclusion into the final LPD 17 design package. Efforts were focused on application of commonality to combat logistics force (CLF) ships, the 21st century surface combatant (SC 21), and other ships in the SCN plan.

- (U) (\$3,999) Developed five large cruise missile carrier (LCMC) / Arsenal Ship initial concept development of demonstrator ship. Project plans and documentation for managing the next phases of this effort.

PROJECT NUMBER: S2196

PROGRAM ELEMENT TITLE: Ship Concept Advanced Design PROJECT TITLE: Design Tools, Plans & Concepts

- (U) (\$35,109) Initiated engineering of Landing Craft, Air Cushion (LCAC) Service Life Extension Program (SLEP) improvements and initiated integrated logistics planning. Initiated engineering for engine upgrades and qualification testing. Modified delivered craft for testing. Developed the Engineering Change Proposal (ECP) for incorporation of modifications on the last craft during production. Technical support and analysis. Craft operations and test support.
- 2. (U) FY 1997 PLAN:
 - (U) (\$598) Integrate new technologies in total ship concepts. Develop ship concepts for potential ships 5-10 years out in the SCN plan, including ship size, configuration, capabilities and rough order of magnitude (ROM) ship costs. Conduct pre-Milestone 0 ship concept studies for combat logistics force, amphibious assault ships, and other potential ship concepts / configurations in support of SCN planning. Analyze the cost/benefit of new concepts and technologies. Develop R&D investment strategies which provide cost/benefit comparisons for new concepts and technologies. Obligations begin upon receipt of funding.
 - (U) (\$1,433) Continue development and improvement of design methods, criteria, standards and data bases. Continue improvements to surface ship synthesis/assessment models. Enhance capability to address minimum required shipboard manning, reduced total cost of ownership, and determine ship size impacts of new technologies. Include the lessons learned from ship modularity, production, and commonality of HM&E systems studies done in previous FYs. Continue improvements to ship cost estimating models. Continue supporting development of advanced computer aided design methods and tools for early stage ship design. Identify, characterize and assess new and emergent technologies and update the HM&E technology database.
 - (U) (\$211) Conduct initial hands-on evaluation of state-of-the-art visualization and simulation techniques for application to ship design and engineering. Accomplish initial exploratory application of techniques having multi-disciplinary applicability.

FY 1998/FY 1999 RDT&E,N BUDGET ITEM JUSTIFICATION SHEET

DATE: February 1997

BUDGET ACTIVITY:4 PROGRAM ELEMENT: 0603563N

PROJECT NUMBER: S2196

PROGRAM ELEMENT TITLE: Ship Concept Advanced Design PROJECT TITLE: Design Tools, Plans & Concepts

- (U) (\$1,078) Continue collection of long-term hydrodynamic loads data and update algorithms for longitudinal and transverse bending as well as torsion loads. Continue grillage strength tests and assessments developing ultimate strength relationships. Complete fracture assessment formulation. Update reliability inputs and assessment techniques; continue validation of processes and utilize technologies/improved design methods on existing ships. Develop unstiffened panels (part II) of the reliability-based load and resistance factor design (LRFD) structural rules for naval surface ships. Support SSC Research.
- (U) (\$444) Support user base in execution of EM Engineering interim Baseline I+ installations and integration. Develop integration plan for EM Engineering Baseline II evolution into the Surface Ship Integrated Topsides Design Project.
- (U) (\$9,249) Continue to identify and develop areas/methods for increased commonality for naval ships and ship systems to improved life cycle affordability. Continue development of common ship architectures for HM&E systems, related C4I systems, and combat systems including interface standards for modular ship systems. Continue development of ship configurations and systems architectures that can utilize commercial processes and/or commercial-off-the-shelf (COTS) equipment and materials. Continue development of total ship concepts for modular surface combat ships and combat logistics support ships. Continue development of food service (galley) module(s), ventilation and chilled water HVAC modules, ship auxiliary systems, and various ship's self defense system modules. Commence development of concept level designs and requirements for modules identified as architectural building blocks, including combat systems modules and shipboard auxiliary system modules. Continue to develop, and maintain specifications and standards for implementing use of common modules, standard components and standard interfaces including use of commercial standards. Continue efforts on more cost effective methods and practices to standardize shipboard equipment for life cycle cost savings. Continue developmental and testing work on modular track/hold down systems and in compartment support systems (i.e. modular electrical connections) for use in mounting standardized and modular equipment aboard ships in C4I and other types of spaces to reduce the future costs of ship equipment/ system modernization. Support SC 21 systems engineering on modularity requirements and flexible mission systems. Validate the prototype PODAC cost model for one type of naval ship. Revise the PODAC cost model based on results of ship production and equipment manufacturing cost data analysis and the validation of the model for naval ship types. Continue development of alternative zonal distributed systems architectures that foster improved ship production and total life cycle ship affordability. With focus on surface combatants continue development of generic and engineered build strategies for naval ships that foster product-oriented ship design and construction, and incorporate common system architectures and modules. Efforts are focused on application of commonality to the 21st century surface combatant (SC 21),

PROGRAM ELEMENT TITLE: Ship Concept Advanced Design PROJECT TITLE: Design Tools, Plans & Concepts

future carrier (CV(X), combat logistics force (CLF) ships, and other ships in the SCN plan. Primary emphasis is on ship and ship systems modularity for and affordability of the SC 21.

- (U) (\$229) Portion of extramural program reserved for Small Business Innovative Research assessment in accordance with 15 U.S.C. 638.

3. (U) FY 1998 PLAN:

- (U) (\$760) Integrate new technologies in total ship concepts. Develop ship concepts for potential ships 5-10 years out in the SCN plan, including ship size, configuration, capabilities and rough order of magnitude (ROM) ship costs. Conduct pre-Milestone 0 ship concept studies for combat logistics force, amphibious assault ships, and other potential ship concepts / configurations in support of SCN planning. Analyze the cost/benefit of new concepts and technologies. Develop R&D investment strategies which provide cost/benefit comparisons for new concepts and technologies.
- (U) (\$1,653) Continue development and improvement of design methods, criteria, standards and data bases. Continue improvements to surface ship synthesis/assessment models. Enhance capability to address minimum required shipboard manning, reduced life cycle cost, and determine ship size impacts of new technologies. Add capability to handle new ship configurations, hull form alternatives, and signature reduction features. Include the lessons learned from ship modularity, production, and commonality of HM&E systems studies done in previous FYs. Continue improvements to ship cost estimating models. Continue supporting development of advanced computer aided design methods and tools for early stage ship design. Identify, characterize and assess new and emergent technologies and update the HM&E technology database.
- (U) (\$1,500) Begin broad-based implementation of state-of-the-art visualization and simulation techniques for ship design and engineering applications. Acquire, validate, adapt, and implement visualization and simulation tools from all sources, including DARPA, ONR, and other government activities for areas such as ship motions, maneuvering, powering, personnel flow, stores flow, structural response, command and communications systems, electric power systems, piping systems, HVAC systems, and combat systems. Develop custom visualization and simulation tools where no alternate source exists. Develop standard wrapper program to integrate visualization and simulation tools with legacy computer aided design and physics-based analysis tools. Integrate ship feasibility tools and new cost algorithms develop by the PODAC effort. Provide capability for realistic, physics-based simulation of ship performance, behavior, and response.

DATE: February 1997

BUDGET ACTIVITY:4 PROGRAM ELEMENT: 0603563N

PROJECT NUMBER: S2196
PROJECT TITLE: Ship Concept Advanced Design PROJECT TITLE: Design Tools, Plans & Concepts

Improve accuracy of survivability, damage tolerance, and damaged mission capability simulation. Provide efficient, reliable, progressively improving set of tools for designers, engineers, builders, operators, and maintainers of Navy ships.

- (U) (\$985) Continue collection of long-term hydrodynamic loads data. Continue development and validation of seaway loads prediction method. Complete updating of compressive strength of plating stiffeners study. Continue grillage strength tests and assessments. Complete fracture assessment formulation. Update reliability inputs and assessment techniques. Develop stiffened panels (part III) of the reliability-based load and resistance factor design (LRFD) structural rules for naval surface ships. Continue validation of processes and utilize technologies/improved design methods on existing ships. Support SSC Research.
- (U) (\$11,300) Identify and develop areas/methods for increased commonality for naval ships and ship systems to improved life cycle affordability. Develop common ship architectures for HM&E systems, related C4I systems, and combat systems including interface standards for modular ship systems. Develop ship configurations and systems architectures that can utilize commercial processes and/or commercial-off-the-shelf (COTS) equipment and materials. Examine commercial technologies to provide more affordable solutions to ship board functional requirements and/or reduced maintenance costs. Evaluate aboard fleet ships suitable commercial technologies to meet shipboard functions. Develop commonality / modular total ship architecture detailed concepts, and requirements for surface combatants. Perform operational, survivability, and cost analysis of this ship architecture. Develop family of commonality based ships for surface combatants and combat logistics force ships. Support SC 21 systems engineering on modularity requirements and meeting flexible mission systems requirements. Continue development of zonal distributed systems architectures for HVAC and other auxiliary support systems that foster improved ship production and total life cycle ship affordability. Refine zonal distributed systems architectures for HVAC, firemain, and other auxiliary/support systems that are scaleable to all classes/sizes of ship types and apply to SC 21 ships. Detailed studies/analysis of alternative distributed systems (i.e. replacements for current means for providing support to main systems and compartments). Survivability and operational evaluations for these systems on surface combatants. Develop detailed requirements for dedicated serviceways for zonal distributed and other support systems. Define Weapons / Topside / Electronic Zones definition & interface standards for combat systems and C4I. Develop module to ship, module to module, and intra-module interface standards for hull, mechanical & electrical systems. Systems engineering analysis (including life cycle cost analysis) to identify/develop the families of modules as the building blocks of the future surface navy, including configuration control requirements with emphasis on combat systems. Complete the HM&E families of common modules fleet level functional sizing and concepts efforts. Develop prototype common modules identified as architectural building blocks during previous FY efforts to demonstrate design, fabrication, shipbuilding process and operational utility, and to support zonal distributed systems

PROGRAM ELEMENT TITLE: Ship Concept Advanced Design PROJECT TITLE: Design Tools, Plans & Concepts

architecture. Commence development of production level designs for modules identified as architectural building blocks of the SC 21, including combat systems modules and shipboard auxiliary system modules. Hull & human support systems module designs & prototypes. Continue development of galley of the future module including evaluation of commercial equipment on existing fleet ships. Support prototype evaluations for ships under construction (such as DDG 51 class) and modernization (CVN 68 class) for habitability common modules, and commercial furniture for offices and berthing. Evaluate commercial technologies to meet hull outfitting equipment functions including assessment at sea. Evaluate results of LPD 17 detailed design experience with modular sanitary spaces to evolve this design for SC 21 ships, CLF (combat logistics force) ships and CV(X). Machinery & auxiliary systems module designs & prototypes. Begin detail design of modules for zonal distributed systems: chill water, ventilation, and fuel & lub oil transfer. Define performance based requirements for family of steering gears, based on commercial rotary value technology, for use on SC 21 ships, CLF ships, and CV(X). Revise LPD 17 shipbuilder developed package units, and construction modules as needed to make them common modules for use on SC 21 ships, CLF ships and CV(X). Targeted candidates are AFFS stations, fire hose stations, CPS fan rooms, LP air, and water mist fire suppression system. Evaluate results of LPD 17 detailed design experience with previously developed ATC auxiliary systems modules to evolve these design for SC 21 ships, CLF ships and CV(X). Combat systems and C4I module designs & prototypes. Identify legacy combat systems for packaging and/or modularization for SC 21 ships. Support modularization of the high ship integration and testing cost items identified to fit with the modular architecture of SC 21 ships. Support design of advanced electronics module that would be used across different systems/spaces that have rapidly changing equipment especially electronics. Support detailed requirements definition for flexible mission bays / spaces. Work with next generation combat systems and C4I developers to provide modularization engineering support so that these systems are supported by zonal distributed systems, and the weapons / topside / sensor zone and interfaces are not violated. Support C4I modularity especially use of standard commercial racks and interfaces for radio communications equipment. Complete development of level II definition and performance requirements for ship self defense system modules. Support integration of distributed computing plant schematic architecture into the physical architecture of modular ship architecture. Continue efforts on more cost effective methods and practices to standardize shipboard equipment for life cycle cost savings. Continue development of the requirements and systems engineering, including logistics support methods, to achieve more cost effective equipment standardization for naval ships. Continue to develop, maintain and update as needed based on lessons learned, specifications and standards for implementing use of common modules, standard components and standard interfaces including use of commercial standards. Work to have these standards and specifications reviewed by industry standard committees and bodies. Prepare ILS and other processes, requirements in specifications that foster use of standard equipment. Analyze potential across acquisition program common buy equipment and support resolution of common buy issues. Develop equipment standardization processes including use of COTS equipment. Definition of families standard equipment / components especially using

COTS equipment. Equipment standardization support to on-going ship design / acquisition programs. Continue to look for, develop, evaluate, and test modularity enabling technologies. Continue developmental and testing work on SMART Deck / C4I Modularity system (modular track/hold down systems) and in compartment support systems (i.e. modular electrical connections) for use in mounting standardized and modular equipment aboard ships in C4I and other types of spaces to reduce the future costs of ship equipment/ system modernization. Complete detailed design of internal to a module/space support systems (electric, cooling, lighting, air, etc.), and from commercial applications (especially electronics). Complete initial development of the product-oriented design and construction (PODAC) cost model for naval ships and ship systems. Collection and analysis of cost data by shipbuilders for use with the model in developing activity cost factors. Revise the PODAC cost model based on results of ship production and equipment manufacturing cost data analysis and the validation of the model for naval ship types. Begin PODAC cost model extensions for combat systems, and C4I. Prototype use and evaluation of the PODAC cost model for analysis zonal architectures and common modules concepts. Operating & support cost analysis methodology development and begin tie in with product work break down of PODAC cost model. Continue identification of changes to naval ship configurations, ship systems, and equipment designs to enable the use of commercial shipbuilding processes for the construction of future naval ships. With focus on surface combatants continue development of generic build strategies (GBS) for naval ships that foster product-oriented ship design and construction, and incorporate common system architectures, alternative distributed ship systems architectures and modules. Include results of the commonality architecture and zonal distributed systems and analyze their impact on ship production costs, scheduling, fabrication, erection, outfitting, and testing. Perform early stage design for production analysis of concepts and technologies for on-going ship acquisition programs primarily SC 21. Support NAVSEA Professor of Ship Production research grant. Efforts are focused on application of commonality to the 21st century surface combatant (SC 21), combat logistics force (CLF) ships, future carrier CV(X), and other ships in the SCN plan. Primary emphasis is on ship and ship systems commonality and modularity for and affordability of the SC 21.

4. (U) FY 1999 PLAN:

- (U) (\$600) Integrate new technologies in total ship concepts. Develop ship concepts for potential ships 5-10 years out in the SCN plan, including ship size, configuration, capabilities and rough order of magnitude (ROM) ship costs. Conduct pre-Milestone 0 ship concept studies for combat logistics force, amphibious assault ships, and other potential ship concepts / configurations in support of SCN planning. Analyze the cost/benefit of new concepts and technologies. Develop R&D investment strategies which provide cost/benefit comparisons for new concepts and technologies.

PROGRAM ELEMENT TITLE: Ship Concept Advanced Design PROJECT TITLE: Design Tools, Plans & Concepts

- (U) (\$16,100) Identify and develop areas/methods for increased commonality for naval ships and ship systems to improved life cycle affordability. Develop common ship architectures for HM&E systems, related C4I systems, and combat systems including interface standards for modular ship systems. Develop ship configurations and systems architectures that can utilize commercial processes and/or commercial-off-the-shelf (COTS) equipment and materials. Examine commercial technologies to provide more affordable solutions to ship board functional requirements and/or reduced maintenance costs. Evaluate aboard fleet ships suitable commercial technologies to meet shipboard functions. Develop commonality / modular total ship architecture detailed concept, and requirements for surface combatants. Perform operational, survivability, and cost analysis of this ship architecture. Develop of family of commonality based ships for surface combatants and combat logistics force ships. Start development of total ship concepts for future aircraft carriers. Support SC 21 systems engineering on modularly requirements and meeting flexible mission systems requirements. Continue development of zonal distribution and total life cycle ship affordability. Detailed design of zonal distributed systems architectures for HVAC, firemain, and other auxiliary/support systems, that are scaleable to all classes/sizes of ship types, for SC 21 ships. Complete detailed studies/analysis of alternative distributed systems (i.e. replacements for current means for providing support to main systems and compartments). Detailed survivability and operations evaluations for these systems on surface combatants. Develop detailed requirements for dedicated serviceways for zonal distributed and other support systems. Detailed definition of Weapons / Topside / Electronic Zones definition & interface standards for combat systems and C4I. Development detailed module to ship, module to module, and intra-module interface standards for hull, mechanical & electrical systems. Complete systems engineering analysis (including life cycle cost analysis) to identify/develop the combat systems families of modules as the building blocks of the future surface Navy, including configuration control requirements. Develop prototype common modules identified as architectural building blocks during previous FY efforts to demonstrate design, fabrication, shipbuilding process and operational utility, and to support zonal distributed systems architecture. Continue development of production level designs for modules identified as architectural building blocks of the SC 21, including combat systems modules and shipboard auxiliary system modules. Produce performance requirements and level II design definition common modules with standard interfaces and/or components. Hull & human support systems module designs & prototypes. Continue development of galley of the future module including evaluation of commercial equipment on existing fleet ships. Support prototype evaluations for ships under construction (such as DDG 51 class) and modernization (CVN 68 class) for habitability common modules, and commercial furniture for offices and berthing. Evaluate commercial technologies to meet hull outfitting equipment functions including assessment at sea. Integrate LPD 17 update modular sanitary spaces into SC 21 ships, CLF ships, and CV(X). Begin efforts with CV(X) team on common modules for aircraft maintenance and supply support that be cross decked with the aircraft and not require ship modifications for

aircraft system changes. Machinery & auxiliary systems module designs & prototypes. Continue detail design of modules for zonal distributed systems: chill water, ventilation, and fuel & lub oil transfer. Build a prototype steering gear module, with commercial rotary value technology, based on performance based requirements for family of steering gears for use on SC 21 ships, CLF ships, and CV(X). Incorporate the revised LPD 17 shipbuilder developed package units, and construction modules that are now common modules into SC 21 ships, CLF ships, and CV(X). Targeted candidates are AFFF stations, fire hose stations, CPS fan rooms, LP air, and water mist fire suppression system. Integrate LPD 17 detailed design experience updated ATC auxiliary systems modules into SC 21 ships, CLF ships, and CV(X). Combat systems and C4I module designs & prototypes. Identify legacy combat systems for packaging and/or modularization for SC 21 ships. Support modularization of the high ship integration and testing cost items identified to fit with the modular architecture of SC 21 ships. Support design of advanced electronics module that would be used across different systems/spaces that have rapidly changing equipment especially electronics. Support detailed requirements definition for flexible mission bays / spaces. Work with next generation combat systems and C4I developers to provide modularization engineering support so that these systems are supported by zonal distributed systems, and the weapons / topside / sensor zone and interfaces are not violated. Support C4I modularity especially use of standard commercial racks and interfaces for radio communications equipment. Work to use these on ships under construction and in modernization. Support modifications of AA size modular 5 inch gun system to accommodate advanced 5 inch gun. Support integration of distributed computing plant schematic architecture into the physical architecture of modular ship architecture. Continue efforts on more cost effective methods and practices to standardize shipboard equipment for life cycle cost savings. Continue development of the requirements and systems engineering, including logistics support methods, to achieve more cost effective equipment standardization for naval ships. Continue to develop, maintain and update as needed based on lessons learned, specifications and standards for implementing use of common modules, standard components and standard interfaces including use of commercial standards. Work to have these standards and specifications reviewed by industry standard committees and bodies. Prepare ILS and other processes, requirements in specifications that foster use of standard equipment. Develop equipment standardization processes including use of COTS equipment. Definition of families standard equipment / components especially using COTS equipment. Equipment standardization support to on-going ship design / acquisition programs. Continue to look for, develop, evaluate, and test modularity enabling technologies. Complete develop and testing work on SMART Deck / C4I Modularity system (modular track/hold down systems) and in compartment support systems (i.e. modular electrical connections) for use in mounting standardized and modular equipment aboard ships in C4I and other types of spaces to reduce the future costs of ship equipment/ system modernization. Complete detailed design of internal to a module/space support systems (electric, cooling, lighting, air, etc.), and from commercial applications (especially electronics). Continue Product Oriented Design & Construction (PODAC) cost model extensions for combat systems, and C4I. Continue collection and analysis of cost data by shipbuilders for use with the model in developing activity

cost factors. Use PODAC cost model to analyze new technologies to validate the models capabilities to correct reflect cost impacts. Continue to work on tying in operating & support cost analysis methodology with product work break down of PODAC cost model. Continue identification of changes to naval ship configurations, ship systems, and equipment designs to enable the use of commercial shipbuilding processes for the construction of future naval ships. With focus on surface combatants continue development of generic build strategies (GBS) for naval ships that foster product-oriented ship design and construction, and incorporate common system architectures, alternative distributed ship systems architectures and modules. Include results of the commonality architecture and zonal distributed systems and analyze their impact on ship production costs, scheduling, fabrication, erection, outfitting, and testing. Perform early stage design for production analysis of concepts and technologies for on-going ship acquisition programs primarily SC 21. Support NAVSEA Professor of Ship Production research grant. Efforts are focused on application of commonality to the 21st century surface combatant (SC 21), combat logistics force (CLF) ships, future carrier CV(X), and other ships in the SCN plan. Primary emphasis is on ship and ship systems commonality and modularity for and affordability of the SC 21. The increased FY 99 funding is for building and evaluating prototype modules that were designed in FY 98, detailed definition of standard interfaces, and reflects the increase in engineering efforts on modular architectures and zonal ship distributed systems applied to surface combatants in support of the SC 21 contract design phase. The majority of this increase goes towards the building of modular food service (galley of the future), modular steering gear, advanced electronics module prototypes, and some smaller modularity enabling technologies demonstrators. The three prototype modules represent one member of each family of common modules for these three shipboard functions that will be used on SC 21 ships, CV(X), LH(X), combat logistics force ships (AOE(X) and ADC(X)), and other future ships.

(U) JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under DEMONSTRATION & VALIDATION because it develops and integrates hardware for experimental test related to specific ship and fleet wide applications.

PROGRAM ELEMENT TITLE: Ship Concept Advanced Design PROJECT TITLE: Design Tools, Plans & Concepts

B. (U) PROGRAM CHANGE SUMMARY:

	FY 1996	FY 1997	FY 1998	FY 1999
(U) FY 1997 President's Budget:	52,044	13,807	25,279	28,330
(U) Adjustments from FY 1997 PRESBUDG:	+2,902	-565	-9,081	-6,076
(U) FY 1998/99 PRESBUDG Submit:	54,946	13,242	16,198	22,254

(U) CHANGE SUMMARY EXPLANATION:

(U) Funding: FY 1996 net increase is due addition of funding for LCMC / Arsenal Ship Demonstrator concept studies and reduction from Small Business Innovative Research (SBIR) assessment. FY 1997 changes are due to NWCf surcharge and general reductions. FY 1998 and FY 1999 decreases are due to restructured program requirements.

(U) Schedule: Change of combat logistics force ships AOE(X)/ADC(X) lead ship award from FY 00 to FY 04 has shifted related and supporting work in this PE/Project to later FYs. This is reflected in the FY 1998/1999 reduction in funding.

(U) Technical: none

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: The primary objective of Ship Preliminary Design and Feasibility Studies is to design more capable warships at reduced cost, with reduced manning and increased producibility, utilizing the latest technologies. Modern day ship design and acquisition processes do not separate Preliminary and Contract Design. These are seamless design actions conducted between MS I and II. Therefore after FY 1996, design activities formerly conducted in this Program Element (P.E.) as Preliminary Design are combined under P.E. 0604567N, Ship Contract Design/Live Fire Test and Evaluation. After FY 1996, the program will be renamed "Ship Feasibility Studies". This program directly supports the Navy Shipbuilding Plan by performing ship Feasibility Studies and developing Preliminary Designs for new ships in the SCN Plan.

(U) Project S0408 - Ship Development (Advanced), supports post Milestone 0 ship Feasibility Studies that provide the technical definition and initial cost estimates for various ship alternatives being considered in the Cost and Operational Effectiveness Analysis (COEA). This project develops the primary supporting documentation for Milestone I decisions.

(U) Project S2300 - CV Feasibility Studies support post Milestone 0 ship Feasibility Studies that provide the technical definition and initial cost estimates for various ship alternatives being considered in the Cost and Operational Effectiveness Analysis (COEA). This project supports interim Operational Requirements Document (ORD) preparation and develops the primary supporting documentation for Milestone I decisions.

(U) JUSTIFICATION FOR BUDGET ACTIVITY. This program is funded under DEMONSTRATION & VALIDATION because it develops and integrates hardware for experimental test related to specific ship or aircraft applications.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: Ship concepts, identified in PE 0603563N (Ship Concept Advanced Design) are transitioned to and further developed by this project after an approved Milestone 0 (MS 0) decision. This project performs the ship Feasibility Studies required after MS 0 to address a specific Mission Needs Statement (MNS) and supports the Cost and Operational Effectiveness Analysis (COEA) for new surface ships in the Navy Shipbuilding Plan; performs impact studies of warfare, hull, machinery and electrical subsystems on advanced ship designs; develops the initial documentation and the design methodology required by government for the design of surface ships in the Shipbuilding Program in accordance with the requirements of the DoD 5000 directives/instructions; supports the development of the Operational Requirements Document (ORD) and other documentation required at Milestone I; develops and evaluates conventional and unconventional hull form alternatives suitable for future acquisition in support of a Milestone I decision. Completion of this phase allows review and approval, at Milestone I, to transfer a ship program to the Contract Design Program Element 0604567N. Ship Feasibility Study products include a description of the alternative ships, principal characteristics and mission critical subsystems, weight estimates, general arrangement sketches, technical risk assessments, and Class F cost estimates. The objective is to provide the decision makers with feasible, affordable alternatives.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$10,034) Conducted Ship Feasibility Studies and COEA studies and supported ORD preparation for ships in the SCN plan which reached MS 0. Feasibility Studies for the Future Surface Combatant (SC-21) continued. \$661K of forward funded FY 1995 funds also supported the SC-21 Feasibility Studies effort. ADC(X) received MS 0 approval in the first quarter. ADC(X) Feasibility Studies and COEA support began.

PROJECT TITLE: Ship Feasibility Studies

2. (U) FY 1997 PLAN:

- (U) (\$12,173) Conduct Ship Feasibility Studies, COEA analysis and support ORD preparation for ships in the SCN plan which reach MS 0. Feasibility Studies, COEA analysis and documentation preparation for the 21st Century Surface Combatant (SC-21) will complete in the fourth quarter to support a planned FY 97 Milestone I Decision. Expand ADC(X) Feasibility Studies and COEA support to include the Fleet Oiler AOE(X). Rename the ADC(X)/AOE(X) effort as the AOE(X).
- (U) (\$204) Portion of Extramural Program reserved for Small Business Innovation Research assessment in accordance with 15 U.S.C. 638

3. (U) FY 1998 PLAN:

(U) (\$3,848) Complete AOE(X) Ship Feasibility Studies, COEA support and preparation of documentation required for the planned FY 98 Milestone I decision.

4. (U) FY 1999 PLAN:

- (U) (\$2,062) Feasibility Studies and COEA support will begin for a new class of helicopter carrier, LH(X) following a Milestone 0 decision.

(U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: Work is directed toward the design, development and test of new and improved components and their related systems for use in nuclear propulsion plants. The intent is to develop safe, reliable, high-performance, long-life nuclear propulsion plants, systems, and components. Work includes development of propulsion plant arrangements, components, and materials, plant analysis and [classified material deleted] for future fleet application, as well as development of a nuclear propulsion plant for a New Attack Submarine.

(U) JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under DEMONSTRATION & VALIDATION because it develops and integrates hardware for experimental test related to specific ship or aircraft applications.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: The purpose is to develop safe, reliable, high-performance, long-life nuclear propulsion plant systems and components. Work is directed towards developing and applying the technology, methods, and materials necessary for designing, developing and testing new and improved components, systems and controls for use in nuclear propulsion plants.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

(U) (\$16,875) Developed designs for [classified material deleted] instrumentation and control equipment to reduce replacement/upgrade costs and improve reliability. Began designing and testing new, less complicated instrumentation and control displays to improve operator response times. Developed engineering models for improved [classified material deleted].

(U) (\$6,471) Developed conceptual and detailed designs of advanced technology electrical distribution components. Developed and tested designs for power electronic conversion, conditioning and control equipment. Developed the design for a [classified material deleted].

(U) (\$4,250) Developed advanced analysis methods for evaluating the effectiveness of new propulsion plant component and system designs, and applicable materials. Tested and evaluated component designs to determine their susceptibility to the adverse effects of vibration, high temperature, pressure, and irradiation. Developed methods for shock-testing new plant arrangements and mounting techniques, and evaluating subsequent data.

PROJECT NUMBER: S1258

PROJECT TITLE: Nuclear Technology Development

- (U) (\$6,400) Continued to develop more reliable and higher performing propulsion plant fluid system and component designs. Developed and tested applications for [classified material deleted]. [classified material deleted].
- (U) (\$11,000) Continued developing new [heat exchanger] designs and technology required for more compact [classified material deleted]. Conducted long-term thermal/hydraulic and corrosion testing to confirm [classified material deleted]. Evaluated materials through stress-corrosion, corrosion-fatigue and fracture toughness tests to validate required properties.

2. (U) FY 1997 PLAN:

- (U) (\$17,348) Develop advanced technology [classified material deleted] instrumentation and control equipment and system designs. Develop and compatibility test [classified material deleted] instrumentation and control [classified material deleted]. Continue developing and testing new, less complicated designs for data displays to improve operator response times. Develop and test propulsion plant [classified material deleted] systems and an [classified material deleted]. Continue development of [classified material deleted] to improve propulsion plant [classified material deleted].
- (U) (\$3,800) Continue to develop and test advanced technology [classified material deleted] designs. Test [classified material deleted].
- (U) (\$3,700) Continue to develop and test advanced analysis methods for propulsion plant component and system designs, and applicable materials. Continue to test and evaluate the susceptibility of component designs to the adverse effects of shock, vibration, high temperature, pressure and irradiation [classified material deleted]. Evaluate structural materials which enable development of more optimal, lighter, and less costly propulsion plant designs.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This effort develops the components and systems applicable to the nuclear propulsion plant for a new design SSN. Work is directed toward design, development, and testing of plant arrangements, heat transfer equipment, fluid systems, instrumentation and control equipment, and power distribution systems, with emphasis on simplifying and exploiting existing technology.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$13,105) Continued developing plant arrangements and foundations, [classified material deleted] Built mock-ups of plant configurations to ensure feasibility of overall plant arrangement.
- (U) (\$13,840) Conducted testing to ensure design meets goals for [classified material deleted] Conducted shielding design analyses. Began development of [classified material deleted]
- (U) (\$15,482) Conducted [classified material deleted] Commenced [classified material deleted] and began long-term performance, structural, and [classified material deleted] testing necessary to confirm design performance, evaluate [classified material deleted] and qualify component designs.
- (U) (\$26,667) Continued fluid transfer and control equipment development and qualification resulting in simplified fluid systems and components such as an advanced main coolant pump, coolant loops, main seawater pump, main condenser, and valves; conducted design efforts for simplified propulsion plant fluid and steam systems and components. [classified material deleted] Fabricated test units and began qualification testing.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: ASM Programs develop affordable advanced machinery and subsystems for surface ship propulsion, electric and auxiliary requirements. These programs are in various phases of development ranging from concept formulation to full scale development. The goals of the ASM Programs are to: reduce acquisition and operating costs of naval ships; provide military advantages; contribute to American industrial competitiveness; and, lead to environmental compliance. These goals are to be accomplished by leveraging investments in technologies that will be usable by both the military and commercial sectors. Some technologies being developed for military application will have significant commercial viability upon completion of development, while other technologies being developed commercially have significant military applications and will be demonstrated and adapted for military use.

(U) ASM places primary emphasis on a system architecture and a systems engineering approach which maintains flexibility and minimizes investment until technologies are demonstrated, affordability is assessed, trade off decisions are made, and subsystems evaluated and brought together for optimal total ship cost effectiveness. The products of ASM include: InterCooled Recuperated (ICR) Gas Turbine Engine; Standard Monitoring and Control System (SMCS); Integrated Power System (IPS); and, Systems Engineering & Modular Architecture.

(U) ICR Gas Turbine Engine. The ICR Gas Turbine Engine is a next generation marine propulsion gas turbine. ICR will significantly reduce life cycle fuel cost and provide a minimum impact alternative to increase range.

(U) A contract for ICR Advanced Development (AD) with an option for Full Scale Development was awarded to Westinghouse Electric Corporation in December 1991. The ICR is derived from the Rolls-Royce RB211 aircraft engine and through the introduction of an intercooler, recuperator, and variable area nozzles achieves approximately a 30% propulsion fuel savings when compared to the LM2500. The RB211 is a modern commercial aircraft engine with over 2000 engines delivered to date and production projected well into the next century.

FY 1998/FY 1999 RDT&E,N BUDGET ITEM JUSTIFICATION SHEET

DATE: February 1997

BUDGET ACTIVITY: 4 PROGRAM ELEMENT: 0603573N

PROGRAM ELEMENT TITLE: Advanced Surface Machinery Programs

PROJECT NUMBER: S1314

PROJECT TITLE: Advanced Surface Machinery Programs

(U) ICR developmental full scale system testing began in July 1994 and is continuing at Pyestock, UK. Recuperator recovery efforts are continuing following the failure in January 1995 of the initial recuperator. A second generation recuperator, which is the exhaust heat recovery unit that provides most of the fuel efficiency gains, was delivered to the test site in December 1995. To date a series of five engine test series have been completed with over 550 hours of successful testing including over 240 hours with the redesigned recuperator which performed satisfactorily. Tests to date have confirmed engine design predictions and fuel savings benefits of recuperation.

(U) Planned Fleet introduction is targeted in FY 03 SC21 class ships. A Cooperative Agreement between the United Kingdom and United States governments was signed by USD(A&T) on 21 June 94 for in-kind and cash contributions to the ICR program. A Cooperative Agreement between the French and United States governments was signed by ASN(RD&A) on 30 August 95 for in-kind and cash contributions to the ICR program. In Feb 94, the Under Secretary of Defense for Acquisition and Technology, USD(A&T) approved an engine Pre-Planned Product Improvement (P3I) for incorporating engine improvements to the DDG51 class to improve fuel efficiency and ensure environmental compliance. Other ship classes are being reviewed for possible ICR installation.

(U) Standard Monitoring and Control System (SMCS). The SMCS integrates the sensing, transmission, interpretation and display of Hull Mechanical and Electrical (HM&E) parameters necessary for machinery control, condition monitoring/assessment, signature control and damage control management. It is a fully digital, open architecture system based upon commercial specifications and standards. The system design is consistent with the total ship Integrated Communications and Control (IC²) architecture while supporting and implementing the proposed Integrated Condition Assessment System (ICAS) and Damage Control System (DCS). SMCS offers potential to reduce machinery space manning and introduce a standard control system across multiple ship platform classes, taking maximum advantage of open system architecture and industry standards. Based on the results of life cycle cost studies, SMCS is expected to reduce machinery control system procurement costs and total cost of ownership. SMCS supports reduced watchstanding through the use of an embedded Onboard Training System (OBTS).

(U) A contract for SMCS hardware and software necessary for an Advanced Development Model (ADM) was awarded to CAE Corporation in Binghamton, New York in May 1993. SMCS ADM equipment completed testing at the DDG-51 Land Based Engineering Site (LBES) at NSWC-SSES Phila. All core system hardware to software components have successfully controlled the DDG-51 LBES. Integration of Supplemental Systems (DCS, ICAS, and OBTS) is completed. OPTEVFOR completed an operational assessment of SMCS in FY-97 with satisfactory results. SMCS-NT is currently being evaluated as part of the Smartship project.

(U) Zonal Electrical Distribution System (ZEDS). The Zonal Electrical Distribution System is a standard architecture for electrical distribution designed to improve ship producibility and reduce ship acquisition and

FY 1998/FY 1999 RDT&E,N BUDGET ITEM JUSTIFICATION SHEET

DATE: February 1997

BUDGET ACTIVITY: 4 PROGRAM ELEMENT: 0603573N

PROJECT NUMBER: S1314

PROJECT TITLE: Advanced Surface Machinery Programs

construction costs. Initial installations of ZEDS incorporated a zonal electrical distribution architecture in order to achieve major enhancements to producibility by reducing the number of watertight compartment penetrations and facilitate testing by ship construction zones. Initial ship installation was FY 94 DDG 51 class ships. This project has been combined with IPS for future systems concepts utilizing dc distribution with rapid reconfiguration and automated control and forms an integral part of the IPS architecture.

(U) Integrated Power System (IPS). The IPS provides complete ship power management by generating power for all load requirements from any combination of prime movers. IPS employs ICR, SMCS, and ZEDS, plus large scale high power density motors, power electronics, and cost saving power distribution architectures. IPS components and technologies are defined through system effectiveness analyses, which include cost and performance factors. IPS addresses ASM program goals through: reduced ship acquisition cost through integration of propulsion and ship's service prime movers; lower ship operational costs resulting from more flexible operating characteristics and more efficient components; reduced ship construction costs by allowing more extensive modular construction of power generation, distribution, and loads if desired; improved survivability and vulnerability through increased arrangement flexibility; reduced manning through improved monitoring and control systems and reduced on-board maintenance requirements; improved ship signature characteristics if required; improved design flexibility to meet future requirements of multiple ship types or missions; integrating power control and protection by fully utilizing the power electronics in the system to perform fault protection as well as power conversion and load control functions; and, reduced machinery system acquisition costs through utilization of commercially shared technologies and components. The target application for IPS is the twenty-first century surface combatant. Elements of IPS such as solid state power electronics and variable speed drives on auxiliaries will be integrated in near-term ship acquisition targets.

(U) A contract for IPS Full Scale Advanced Development (FSAD) was awarded to Lockheed-Martin (then Martin Marietta) Ocean, Radar and Sensor Systems, Syracuse, New York in February 1995. IPS FSAD incorporates a commercial marine approach to shipboard power generation, propulsion, and electrical power distribution, employing a commercial industrial-derivative generator and propulsion motor, a developmental propulsion power converter and a zonal direct current (DC) ship service electrical distribution system. The focus of the FSAD effort is on system integration, with maximum use of commercial technology adapted as necessary to satisfy military requirements. The IPS architecture will allow the Navy to incorporate developing technologies such as next generation power electronics such as Power Electronic Building Blocks (PEBBs), fuel cells, permanent magnet electric machines and pulse power systems into future ship designs as programmed, pre-planned replacements or additions for the first generation of IPS modules, with minimum impact on a more efficient and streamlined ship design and construction process.

(U) IPS has the potential to revolutionize the design, construction and operation of U.S. naval ships by using electricity as the primary energy medium aboard ship. IPS reduces the number of installed prime movers to a minimum, as

BUDGET ACTIVITY: 4 PROGRAM ELEMENT: 0603573N

PROGRAM ELEMENT TITLE: Advanced Surface Machinery Programs

PROJECT NUMBER: S1314

PROJECT TITLE: Advanced Surface Machinery Programs

any power generating unit can supply either propulsion or ship service power to support ship operational priorities at any given time. The flexibility of electric power transmission allows power generating modules with various over ratings to be connected to propulsion loads and service power converters in whatever arrangement support the ship's mission at lowest overall cost. The ability to independently position the minimum amount of machinery components in small, unmanned modules avoids the need for large engine rooms which in turn will permit greater separation and compartmentation in the ship, with significant benefits in manning, safety and ship survivability over conventional arrangements designs. Additionally, the use of small, unmanned machinery spaces will permit the use of non-CFC based fire extinguishing agents (such as CO2) to be installed as integral fire suppression systems similar to those currently used in fleet propulsion gas turbine enclosures.

(U) Systems Engineering & Modular Architecture. Systems Engineering & Modular Architecture in the ASM Programs are focused on increasing the commonality of components used across ship types and in developing modules which will be integral with standardization, zonal system architectures, and generic shipbuilding strategies. The purpose of increased commonality is to reduce the total cost of ship ownership by using common modules composed of standard components and/or standard interfaces.

(U) ASM modules are being designed to support anticipated ship construction requirements. These modules include Power Generation Modules, Propulsion Motor Modules, Electric Power Transmission/Distribution/Conversion Modules, and Control Modules. Each of these major items consists of numerous sub-modules which, through computer aided design techniques, are integrated as necessary to fulfill unique ship requirements.

(U) JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under DEMONSTRATION & VALIDATION because it develops and integrates hardware for experimental test related to specific ship or aircraft applications.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$27,154) IPS: Continued development of IPS FSAD including the following efforts: completed design of generator subsystem and propulsion motor subsystem; continued design of the ship service distribution system and its modules; completed design of FSAD software for IPS Supervisory Control and Zonal Control and began to code and test software; conducted FSAD software requirements review, FSAD software design review, and FSAD software interface req ts review; took delivery of SMCS GFE hardware; and, began design and preparation of IPS FSAD pre-LBES and LBES. Awarded contract for design and fabrication of axial full scale PM propulsion motor.

BUDGET ACTIVITY: 4 PROGRAM ELEMENT: 0603573N

PROJECT NUMBER: S1314

PROGRAM ELEMENT TITLE: Advanced Surface Machinery Programs

PROJECT TITLE: Advanced Surface Machinery Programs

- (U) (\$44,328) ICR: Continued recuperator recovery plan including the design and build of the developmental recuperator which enabled engine testing with a recuperator to continue. Stripped and inspected A/2 and B/2 engines. Started A/3 engine strip and inspection Completed Design Review Number 3 (DR3) using redesigned recuperator. DR3 provided preliminary performance data for the full ICR power range in all modes of operation. Continued ICR system development testing at the Pyestock test facility using B/2 and A/3 engines, tests included airborne noise trials, air system and control system tests, performance demonstration, strain gauge and thermal paint tests and 50 hour endurance test. Continued site preparation and initiated activation of the North American Land-Based Engineering Site at NSWC.
 - (U) (\$ 3,770) SMCS: Completed propulsion testing on DDG51 LBES. Initiated logistic support development.
 - (U) (\$ 4,100) Smart Ship: Supported the Smart Ship initiative aboard the USS Yorktown (CG-48) including the following efforts: supported design, manufacture, and test of the Damage Control System (DCS) and Machinery Control System (MCS); provided overall management and coordination between members supplying the DCS, MCS, Integrated Condition Assessment System (ICAS), and shipwide LAN.
 - (U) (\$ 1,641) Systems Engineering: Performed life cycle costing, producibility studies, manning studies, module development, systems integration, and architecture design in support of ASMP efforts. Provided support to naval architecture and costing teams for SC-21 COEA.
2. (U) FY 1997 PLAN:
- (U) (\$41,629) ICR: Complete A/3 strip and inspect, testing of B/3, and B/3 strip and inspect. Build A/4. Complete the first 500hr endurance test using A/4 engine. Complete A/4 strip and inspect. Finalize design of the EDM recuperator. Commence fabrication of EDM recuperator.
 - (U) (\$21,222) IPS: Continue development of IPS including: Complete manufacturing design and begin manufacture of generator, propulsion motor(s), and propulsion distribution subsystems; complete system design and start detail design of Ship Service Distribution System (SSDS) functional equivalent modules which include the DC power supply and Ship Service Inverter Modules (SSIM) and Ship Service Converter Modules (SSCM); complete IPS

supervisory control and zonal control code and test; complete IPS system and distribution module design reviews; complete FSAD SIM/STIM; and, continue FSAD pre-LBES and LBES site preparation and equipment delivery.

- (U) (\$ 1,732) Systems Engineering: Perform life cycle costing, producibility studies, manning studies, module development, systems integration, and architecture design, and other IPS FSED system design/analysis efforts as needed to support development of FSED module specifications. Continue support for SC-21 COEA, CV(X), CVN77, and other possible IPS ship candidates.

- (U) (\$ 1,472) Portion of extramural program reserved for Small Business Innovation Research assessment in accordance with 15 U.S.C. 638.

3. (U) FY 1998 PLAN:

- (U) (\$15,694) IPS: Continue development of IPS including: Complete generator subsystem, propulsion motor(s), and propulsion distribution subsystems fabrication and factory acceptance testing (FAT); complete FSAD SSDS equipment fabrication and factory testing including ship service power supply and SSIM/SSCM; take delivery of SSDS equipment; take delivery of generator, propulsion motor and propulsion distribution subsystems; complete FSAD LBES site preparation; complete INCO of all FSAD equipment; and, begin preparation of FSED procurement documents. Commence FSAD system testing at LBES.
- (U) (\$32,297) ICR: Take delivery of EDM recuperator. Modify the exhaust collector, perform testing on B/4 engine, install the EDM recuperator, and perform testing on the A/5 engine. Testing will include high pressure turbine metal temperature measurements on B/4, and functional and performance testing on A/5. Complete strip and inspection of the B/4 engine.
- (U) (\$ 1,750) Systems Engineering: Perform life cycle costing, producibility studies, manning studies, module development, systems integration, and architecture design and other IPS FSED system design/analysis efforts as needed to support development of FSED module specifications. Continue support for SC-21 design efforts.

4. (U) FY 1999 PLAN:

- (U) (\$23,297) IPS: Continue development of IPS including: complete FSAD system testing; complete preparation of FSED procurements documents and evaluate proposals for development of IPS FSED ship system modules; award contracts for manufacture; and, begin design/fabrication of FSED modules.
- (U) (\$23,892) ICR: Finish the A/5 engine testing began last FY, conduct A/6 engine testing, and perform most of the 500-hour endurance test on engine B/6.
- (U) (\$ 1,900) Systems Engineering: Perform life cycle costing, producibility studies, manning studies, module development, systems integration, and architecture design and other IPS FSED system design/analysis efforts as needed to support development of FSED module designs. Continue support for SC-21 design efforts.
- (U) (\$3,000) Power Electronic Building Block (PEBB) Demonstration: Initiate detailed design and fabrication of PEBB based IPS power conversion modules (PCM s).

B. (U) PROGRAM CHANGE SUMMARY:

	FY 1996	FY 1997	FY 1998	FY 1999

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This project provides shore based testing of integrated combat direction, weapon, sensor and computing systems prior to their installation in operational fleet units. The operational computer programs are assembled and tested to assure proper configuration and interoperability in a test environment similar to their ultimate shipboard operational environment. Included is operational assessment testing of the integrated suite of computer programs. This is the only opportunity for this range of testing of individually developed and tested combat system subsystem programs prior to shipboard delivery for operational use. Combat system level configuration control is maintained by updates to the Surface Ship Combat System Master Plan (SSCSMP).

(U) JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under DEMONSTRATION & VALIDATION because it develops and integrates hardware for experimental test related to specific ship or aircraft applications.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$3,914) Conducted integration testing of: Advanced Combat Direction System (ACDS) Block 1; ACDS Block 0 improvements and Cooperative Engagement Capability for CV/CVN and LHD 1 classes; AN/SQQ-89 Surface Warfare System upgrades, Rolling Airframe Missile System and Rapid Anti-Ship Missile Integrated Defense System in DD 963 class; and, Command Direction System upgrades in FFG 7 Class.
- (U) (\$1,864) Initiate design and development of test beds for LPD-17 Class. Continued planning and preparations for out-year testing including simulation system, test bed and test procedures design and development.
- (U) (\$300) Continued SSCSMP updates.

2. (U) FY 1997 PLAN:

- (U) (\$2,603) Conduct integration testing of: Advanced Combat Direction System (ACDS) Block 1 upgrades and Shipboard Self Defense System in CV/CVN and LHD 1 classes; and, ACDS Block 0 upgrades in LHA 1 class.
- (U) (\$754) Initiate design and development of test beds for CVN 68 and CVN 76 Classes and continue for LPD17 Class. Continue planning and preparations for out-year testing including simulation system, test bed and test procedures design and development.
- (U) (\$220) Continue SSCSMP updates.
- (U) (\$68) Portion of extramural program reserved for Small Business Innovation Research Assessment in accordance with 15 U.S.C. 638.

3. (U) FY 1998 PLAN:

- (U) (\$5,645) Conduct integration testing of Advanced Combat Direction System (ACDS) Block 1 upgrades and Integrated Ships Defense System in CV/CVN and LHD 1 classes.
- (U) (\$1,819) Continue design and development of test beds for CVN 68, CVN 76 and LPD 17 classes. Continue planning and preparations for out-year testing including simulation system, test bed and test procedures design and development.
- (U) (\$275) Continue SSCSMP updates.

4. (U) FY 1999 PLAN:

- (U) (\$7,317) Conduct integration testing of Advanced Combat Direction System (ACDS) Block 1 upgrades and Integrated Ships Defense System in CV/CVN, LHD 1 and LHA 1 classes.

- (U) (\$2,201) Continue development of test bed for LPD 17 class. Continue planning and preparations for out-year testing including simulation system, test bed and test procedures design and development.
- (U) (\$275) Continue SSCSMP updates.

B. (U) PROGRAM CHANGE SUMMARY:

(U) FY 1997 President's Budget:	FY 1996 5,246	FY 1997 3,879	FY 1998 5,961	FY 1999 7,455
(U) Adjustments from FY 1997 PRESBUDG:	+832	-234	+1,778	+2,338
(U) FY 1998/99 PRESBUDG Submit:	6,078	3,645	7,739	9,793

(U) CHANGE SUMMARY EXPLANATION:

- (U) Funding: FY 1996: Increase for Integrated Combat System Test Facility(ICSTF): OPNAV BTR for LPD-17 Class (\$900) and other minor pricing adjustments (-\$68).
- FY 1997: Decrease reflects Congressional Undistributed reductions (-\$234).
- FY 1998: Increase for ICSTF: Critical Non-Aegis Combat System Integration will fully fund scheduled testing. Prior funding levels covered only minimal levels of testing (\$1,800) and other minor pricing adjustments (-\$22).
- FY 1999: Increase for ICSTF: Critical Non-Aegis Combat System Integration will fully fund schedule testing. Prior funding levels covered only minimal levels of testing (\$2400) and other minor pricing adjustments (-\$62).

- (U) Schedule: Weekly testing will be expanded to provide the additional test hours necessary to fulfill the requirements of the increased scope of testing and meet the established fleet delivery schedules.

- (U) Technical: Fleet delivery of combat system computer programs which have undergone full interoperability testing.
- (U) OTHER PROGRAM FUNDING SUMMARY: Not applicable.

(U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: **INSENSITIVE MUNITIONS ADVANCED DEVELOPMENT (IMAD) (Project S0363):**

Most Navy munitions react violently when exposed to unplanned stimuli such as fire, shock and bullet impact, thus presenting a great hazard to ships, aircraft, and personnel. This IMAD program will provide, validate and transition technology for explosives, propellants and ordnance to enable production of munitions insensitive to unplanned stimuli with no reduction to combat performance.

NON-NUCLEAR EXPENDABLE ORDNANCE (NNEO) (Project S2299): This item addresses improvements to Navy surface launched (2T) non-nuclear expendable ordnance. It supports transition of the Multi-Function Fuze from Engineering and Manufacturing Development (E&MD) to production.

CONVENTIONAL FUZE/WARHEAD PACKAGE (Project U1821): The Navy requires improved lethality of air and surface launched ordnance to defeat advanced threats. Current specific requirements and initiatives to address them include: the ability to defeat anti-ship missiles attacking at extremely low altitudes by improving SPARROW Missile through the Missile Homing Improvement Program (MHIP) to counter deceptive countermeasures; demonstrate advance missile fuzing systems to defeat extremely low-altitude and low observable targets with the Advance Threat Fuze; develop advanced integrated guidance/fuzing and warhead mass-focusing systems to increase lethality against current and emerging threats. This project will, in future years, also provide the vehicle to address emergent requirements by transitioning mature fuze and warhead technology from conceptual developments to engineering development with minimum technical and financial risk.

(U) JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under DEMONSTRATION & VALIDATION because it develops and integrates hardware for experimental test related to specific ship or aircraft applications.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION:

Most Navy munitions react violently when exposed to unplanned stimuli such as fire, shock and bullet impact, thus presenting a great hazard to ships, aircraft and personnel. This program will provide, validate and transition technology to all new weapon developments and priority weapon systems and enable production of munitions insensitive to these stimuli with no reduction in combat performance. The Insensitive Munitions (IM) Advanced Development Program is the Navy's focused effort on propellants, propulsion units, explosives, warheads, fuzes and pyrotechnics to reduce the severity of cook-off and bullet/fragment impact reactions, minimizing the probability for sympathetic detonation, both in normal storage and in use, increasing ship survivability and satisfying performance and readiness requirements. Each technology area is divided into subtasks addressing specific munition/munition class IM deficiencies. Energetic materials producibility is demonstrated to assure national capability to produce and load munitions systems. The program is being closely coordinated with other Military Departments, NATO and allied countries to eliminate redundant efforts and maximize efficiency. A joint service IM requirement has been developed. Insensitive munitions are identified as a DoD critical technology requirement and considered as part of a weapon design per DoD 5000.2R.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$568) Validated and analyzed weapon systems POA&Ms for IM compliance. Analyzed the availability of critical chemicals.
- (U) (\$2,608) Demonstrated high explosives which showed improved IM characteristics while maintaining or improving operational performance. Continued scale-up, performance and vulnerability testing of a castable CL-20 based explosive. Completed downselect for two candidate improved underwater explosives for qualification.

DATE: February 1997

BUDGET ACTIVITY: 4 PROGRAM ELEMENT: 0603609N

PROGRAM ELEMENT TITLE: Conventional Munitions

PROJECT NUMBER: S0363

PROJECT TITLE: Insensitive Munitions Advanced Development

1. (U) FY 1996 ACCOMPLISHMENTS (CON T):

- (U) (\$1,193) Continued evaluation of IM ordnance concepts. Conducted system demonstrations of new high explosives combined with improved warhead and booster designed to support technology transitions. Continued modeling and data base improvements and application that reduce and enhance IM warhead design and test efforts.
- (U) (\$2,960) Evaluated and demonstrated IM propellants and propulsion systems which provide improved or comparable performance to in-service systems and better IM characteristics. Combined candidate IM propellants and case concepts to demonstrate compliance with IM and performance requirements. Continued demonstration and evaluation of prototype IM dual thrust rocket motor for surface missile systems (SMS).
- (U) (\$290) Forward financing FY97 requirements for low execution rate.

2. (U) FY 1997 PLAN:

- (U) (\$935) Continue validation and analysis of weapon systems POA&Ms for IM compliance. Analyze the availability of critical chemicals.
- (U) (\$2,267) Demonstrate high explosives which show improved IM characteristics while maintaining or improving operational performance. Demonstrate an energy-managed IM compliant booster explosive for VLS missiles. Complete scale-up, performance and vulnerability testing of a castable CL-20 based explosive and qualify if warranted. Complete qualification of improved underwater explosives.
- (U) (\$1,086) Evaluate IM ordnance concepts. Conduct system demonstrations of new high explosives combined with improved warhead and booster designed to support technology transitions. Continue data base applications that reduce and enhance IM warhead design and test efforts.
- (U) (\$5,237) Evaluate and demonstrate IM propellants and propulsion systems which provide improved or comparable performance to in-service systems and better IM characteristics. Combine candidate IM propellants and case concepts to demonstrate compliance with IM and performance requirements. Initiate formulation evaluation of ADN based propellant. Demonstrate high stiffness composite and injection molded motor cases. Complete demonstration and evaluation of prototype IM advanced booster propulsion systems for large diameter, 13-inch or greater, rocket motors for surface missile systems (SMS).

2. (U) FY 1997 PLAN (CONT):

- (U) (\$290) Forward financing FY98 requirements for low execution rate.
- (U) (\$69) Portion of extramural program reserved for Small Business Innovation Research (SBIR) assessment in accordance with 15 U.S.C. 638.

3. (U) FY 1998 PLAN:

- (U) (\$1,078) Continue validation and analysis of weapon systems POA&Ms for IM compliance. Analyze the availability of critical chemicals.
- (U) (\$3,253) Demonstrate high explosives which show improved IM characteristics while maintaining or improving operational performance. Demonstrate deformable high explosives for new Anti-Air-Warfare Warheads. Demonstrate internal blast explosive, high performance pressed metal accelerating explosive and deformable explosive. Qualify an insensitive high bubble energy underwater explosive. Complete qualification of a castable CL-20 based explosive.
- (U) (\$1,345) Evaluate IM ordnance concepts. Conduct system demonstrations of new high explosives combined with improved warhead and booster designed to support technology transitions. Continue data base applications that reduce and enhance IM warhead design and test efforts.
- (U) (\$4,469) Evaluate and demonstrate IM propellants and propulsion systems which provide improved or comparable performance to in-service systems and better IM characteristics. Combine candidate IM propellants and case concepts to demonstrate compliance with IM and performance requirements. Continue scale-up, performance and vulnerability testing of ADN based propellant. Demonstrate performance of super high pressure composite case motor. Demonstrate insensitive high energy booster propellants and motors.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: The Navy requires improved lethality of air and surface launched ordnance to defeat advanced threats. This budget item addresses improvements to Navy surface launched (2T) non-nuclear expendable ordnance (NNEO) outside existing operational requirements. The commodities comprising 2T NNEO are: major and medium caliber gun ammunition, small arms ammunition, other ship gun ammunition, pyrotechnics and demolition items. There are no other R&D budget items supporting the 2T NNEO program. Currently, this project is supporting transition of the Multi-Function Fuze (MFF) from E&MD to production. The MFF will be used on 76mm and 5 /54 gun ammunition and will replace many existing configurations by providing multi-mode functioning (AAW, ASuW, KGFS) in one fuze.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: The Navy requires improved lethality of air and surface launched ordnance to defeat advanced threats. This is the only Navy 6.3B RDT&E program that addresses improvements in warhead and fuze technology and provides a vehicle for orderly planning and transition of Navy 6.2 and 6.3A investments into E&MD for Navy missile systems. This project improves SPARROW missile capability to defeat existing and near term deceptive counter measures with the Missile Homing Improvement Program (MHIP). This project also addresses increased lethality against current and emerging threats with the development of a mass focusing warhead system, and Land Attack Cruise Missile Defense (LACMD)/Direct Hit and Multi-Mode Strike Ordnance Systems. The project supports the full spectrum of missile advanced development including guidance technology improvements. This project will, in future years, also provide the vehicle to address emergent requirements by transitioning mature development efforts into weapon systems with minimum technical and financial risk.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$5,629) DIRECTIONAL ORDNANCE SYSTEM: Completed system design and integration tests and defined system demonstration configuration; continued with system analysis and risk assessments.
- (U) (\$853) ADVANCED STRIKE WARHEAD IMPROVEMENT: Continued system analysis and design; initiated system integration tests.
- (U) (\$6,836) LAND ATTACK CRUISE MISSILE DEFENSE (LACMD)/ DIRECT-HIT FUZE AND WARHEAD: Selected concept and initiated prototype design and development. Completed warhead concept study contracts and preliminary downselect to 6-8 concepts/variants. Conducted trade studies, top level end game effectiveness analysis and critical experiments. Designed, fabricated, and evaluated S&A concept models. Conducted advanced fuze efforts.
- (U) (\$520) ORDNANCE COMPONENT TECHNOLOGY: Completed effort on universal Safe and Arming (S-A) chipset; continued with efforts on initiation systems and customized S-A Components; initiated effort on high G fiber-optic accelerometer.

UNCLASSIFIED

FY 1998 / FY 1999 RDT&E,N BUDGET ITEM JUSTIFICATION SHEET

DATE: February 1997

BUDGET ACTIVITY: 4

PROGRAM ELEMENT: 0603609N

PROJECT NUMBER: U1821

PROGRAM ELEMENT TITLE: Conventional Munitions

PROJECT TITLE: Conventional Fuze / Warhead Package

- (U) (\$5,881) MULTI-FUNCTION FUZE: Engineering, manufacturing, producibility enhancement for OPEVAL/TECHEVAL. Evaluated 1000 fuzes and update technical data package.
- (U) (\$5,499) MHIP DT/OT.
- (U) (\$1,313) Forward financing of FY 1997 requirements due to low execution rates.

2. (U) FY 1997 PLAN:

- (U) (\$4,839) DIRECTIONAL ORDNANCE SYSTEM: Conduct system level testing. Refine fragmentation method. Optimize ESAD and initiation system.
- (U) (\$2,517) ADVANCED STRIKE WARHEAD IMPROVEMENT: Conduct precursor warhead and penetration tests and validate concept.
- (U) (\$500) ORDNANCE COMPONENT TECHNOLOGY: Complete effort on initiation system; continue with very high energy density capacitors and high G fiber-optic accelerometer efforts.
- (U) (\$2,759) MULTI-FUNCTION FUZE: Perform certification of OPEVAL/TECHEVAL and laboratory testing.
- (U) (\$6,258) LAND ATTACK CRUISER MISSILE DEFENSE/ DIRECT HIT FUZE WARHEAD: Continue with warhead concept optimization end game effectiveness analysis, critical experiments and fabrication studies. Fabricate, test and evaluate S-A breadboard design. Integrate fuze community inputs.
- (U) (\$1,313) Forward financing of FY 1998 requirements due to low execution rates in FY 1996.
- (U) (\$208) Portion of extramural program reserved for Small Business Innovation Research (SBIR) assessment in accordance with 15 U.S.C. 638.

3. (U) FY 1998 PLAN:

- (U) (\$3,887) DIRECTIONAL ORDNANCE SYSTEM: Assemble demonstration hardware. Conduct system demonstration. Develop specifications, drawings, and design and test data reports. Prepare system demonstration report.
- (U) (\$2,384) ADVANCED STRIKE WARHEAD IMPROVEMENT: Conduct follow through warhead and fuze/ESAD tests. Conduct system effectiveness assessments and tradeoffs.
- (U) (\$500) ORDNANCE COMPONENT TECHNOLOGY: Continue effort with customized S-A components. Continue with very high energy density capacitors and high G fiber optic accelerometer efforts.

PROGRAM ELEMENT TITLE: Conventional Munitions PROJECT TITLE: Conventional Fuze / Warhead Package

(U) CHANGE SUMMARY EXPLANATION:

- (U) Funding: Decrease in FY 1996 is due to minor pricing adjustments. Decrease in FY 1997 is due to Congressional Undistributed General reductions.
- Change in FY 1998 is due to increase for Land Attack Cruise Missile Defense (LACMD) (+7,000), Forward Financing of FY 1998 low execution rates (-1,313) and NWCF rate adjustments. Increase in FY 1999 is due to increase for LACMD (+7,000), program pricing adjustments (-2,347) and NWCF rate adjustments (-111).
- (U) Schedule: Not applicable.
- (U) Technical: Not applicable.

FY 1998/1999 RDT&E,N BUDGET ITEM JUSTIFICATION SHEET DATE: February 1997

BUDGET ACTIVITY: 4 PROGRAM ELEMENT: 0603610N PROJECT NUMBER: V1873
PROGRAM ELEMENT TITLE: MK-50 SHALLOW WATER PERFORMANCE PROJECT TITLE: LTWT TORPEDO

(U) COST (Dollars in thousands)

PROJECT NUMBER & TITLE	FY 1996 ACTUAL	FY 1997 ESTIMATE	FY 1998 ESTIMATE	FY 1999 ESTIMATE	FY 2000 ESTIMATE	FY 2001 ESTIMATE	FY 2002 ESTIMATE	FY 2003 ESTIMATE	TO COMPLETE PROGRAM	TOTAL
V1873 LTWT TORPEDO	2,893	1,270	2,012	2,820	0	0	0	0	0	24,816

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: The funding is to continue an ongoing MK-50 Torpedo Improvement program to maintain the technological edge in US Navy torpedoes. The program addresses improvements in shallow water, near surface performance, zero doppler target detection, and bottom target recognition necessary to counter the high-tech diesel submarines encountered in the littoral warfare arena.

(U) JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under DEMONSTRATION & VALIDATION because it develops and integrates software/hardware for experimental test related to specific ship or aircraft applications.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U)(\$1,111) Began development, modeling and testing of tactical software to refine shallow water search patterns/tactics, addressed multi-bounce propagation, refined bottom avoidance algorithms, and addressed near surface targets.
- (U)(\$1,118) Began development, modeling and testing of improved tactical software for counter-countermeasure performance, long range acquisition, and slow low doppler (loitering) target detection.
- (U)(\$664) Will forward fund FY 1997 software tasks due to low execution rates in FY 1996.

PROJECT TITLE: LTWT TORPEDO

2. (U) FY 1997 PLAN:

- (U)(\$301) Continue development, modeling and testing of tactical software to refine shallow water search patterns/tactics, address multi-bounce propagation, and refine bottom avoidance algorithms.
- (U)(\$300) Continue development, modeling and testing of improved tactical software for counter-countermeasure performance, long range acquisition, and slow low doppler (loitering) target detection.
- (U)(\$664) Will forward fund FY 1998 software tasks due to low execution rates in FY 1996.
Obligation 10/97
- (U)(\$5) Portion of extramural program reserved for Small Business Innovation Research assessment in accordance with 15 U.S.C. 638.

3. (U) FY 1998 PLAN:

- (U)(\$1,046) Continue development, modeling and testing of tactical software to refine shallow water search patterns/tactics, address multi-bounce propagation, and refine bottom avoidance algorithms.
- (U)(\$966) Continue development, modeling and testing of improved tactical software for counter-countermeasure performance, long range acquisition, and slow low doppler (loitering) target detection.
(U) (\$0) Continue development, modeling and testing of software tasks.

4. (U) FY 1999 PLAN:

- (U)(\$1,466) Complete development, modeling and testing of tactical software to refine shallow water search patterns/tactics, address multi-bounce propagation, and refine bottom avoidance algorithms.
- (U)(\$1,354) Complete development, modeling and testing of improved tactical software for counter-countermeasure performance, long range acquisition, and slow low doppler (loitering) target detection.

1. FY 1997 and beyond AVTB funding and discussion are contained in Program Element (PE) 0206623M, Marine Corps Ground Combat/Supporting Arms Systems, Project C2237, AVTB.

(U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: The AAAV program will field a successor to the Marine Corps' current Amphibious vehicle, the AAV7A1. The AAAV will provide the principal means of tactical surface mobility for the Marine Air-Ground Task Force (MAGTF) during both ship-to-objective maneuver and subsequent combat operations ashore. The AVTB provides facilities and personnel which perform a broad range of testing, repair and technical services to Amphibious vehicles.

(U) JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under PROGRAM DEFINITION AND RISK REDUCTION (DEMONSTRATION & VALIDATION) because it develops and integrates hardware for experimental test related to specific ship or aircraft applications.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: The AAAV program will field a successor to the Marine Corps' current Amphibious vehicle, the Advanced Amphibious Vehicle 7A1 (AAV7A1). The AAAV will provide the principal means of tactical surface mobility for the Marine Air-Ground Task Force (MAGTF) during both ship-to-objective maneuver and subsequent combat operations ashore.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

✂ (U) (\$17,046) Awarded the Demonstration and Validation (Dem/Val) phase contract without protest.

✂ (U) (\$1,671) Completed design, fabrication and testing of operational mock-ups of the VC/WS.

✂ (U) (\$1,483) Conducted detail design of remaining peripherals of MTU Version B engine development, as directed in accordance with Congressional direction.

✂ (U) (\$3,258) Completed re-design, modification and 400 hour FMIT of the 2,600 Hp MTU (Version A) diesel engine.

✂ (U) (\$516) Completed re-design, fabrication and component laboratory tests of the two-stage, single axis turbocharger for the advanced version (Version B) of the 2,600 Hp MTU diesel engine.

✂ (U) (\$3,449) Continued to provide in-house support.

B. (U) PROGRAM CHANGE SUMMARY:

	<u>FY 1996</u>	<u>FY 1997</u>	<u>FY 1998</u>	<u>FY 1999</u>
(U) FY 1997 President's Budget:	37,010	40,106	60,239	104,146
(U) Adjustments from FY 1997 PRESBUD:	-4,787	+21,212	- 105	+2,099
(U) FY 1998 President's Budget:	32,223	61,318	60,134	106,245

(U) CHANGE SUMMARY EXPLANATION:

(U) Funding: FY 1996 reflects below threshold reprogramming of \$4.0 million. The \$4 million is replaced in FY 1997. The Congressional increase of \$20.0 million in FY 1997 (not requested in the budget) is to procure an additional Prototype for testing and evaluation, to accelerate testing activities now scheduled for FY 1999 and 2000, and to preserve the option to enter production a year earlier than currently planned. FY 1997 funding was decreased by \$2,788, Congressional marks, various undistributed \$129; non-FFRDC \$34, FIRDC \$1,282, DBOF surcharge, \$1,282. General Reduction, \$60. Budgetary Resou, and \$1 BTR. FY 1998 and 1999 adjustments reflect program cost estimates.

C. (U) FUNDING PROFILE: Not applicable.

UNCLASSIFIED

FY 1998 RDT&E,N BUDGET ITEM JUSTIFICATION SHEET DATE: February 1997

BUDGET ACTIVITY: 4

PROGRAM ELEMENT: 0603612M

PROGRAM ELEMENT TITLE: Marine Corps Mine Countermeasures

(U) COST (Dollars in thousands)

PROJECT NUMBER & TITLE	FY 1996 ACTUAL	FY 1997 ESTIMATE	FY 1998 ESTIMATE	FY 1999 ESTIMATE	FY 2000 ESTIMATE	FY 2001 ESTIMATE	FY 2002 ESTIMATE	FY 2003 ESTIMATE	TO COMPLETE	TOTAL PROGRAM
C2106 Advanced Mine Countermeasures System (AMCS)	1,652	0	0	1,985	2,489	1,791	0	0	0	8,224

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This project was formerly titled Distributed Explosive Mine Neutralization System (DEMNS). The AMCS program centers on neutralization of blast-hardened and complex-fuzed mines, and unexploded munitions (current and future threat) that defeat the effectiveness of current minefield breaching systems. Primary goals are: neutralization in-stride from a standoff position; very high neutralization percentages against all types of mines; and joint applicability for use with primary assault platforms to include land and amphibious assaults.

(U) The AMCS program researches and develops assault minefield breaching capabilities that will neutralize current and future blast-hardened and complex-fuzed mines from a standoff position. AMCS will alleviate a critical deficiency in breaching minefields during amphibious operations. Current breaching assets are 1950s technology that do not meet breaching mission requirements.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

✗ (U) (\$1,607) Completed standoff minefield breacher DEM/VAL and development and testing of system components.

✗ (U) (\$45) Completed program documentation and contract progress analysis. Program transitions to PE 0604612M, Marine Corps Mine Countermeasures, for engineering and manufacturing development.

2. (U) FY 1997 PLAN: Efforts funded under Program Element 0604612M, Project C2106.

3. (U) FY 1998 PLAN: Efforts funded under Program Element 0604612M, Project C2106.

C1964 ANTI-ARMOR WEAPON SYSTEM	338	436	431	447	503	582	640	748		

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This project provides for the Marine Corps, participation in the Joint Anti-Armor program entitled Javelin (Advanced Anti-Tank Weapon System - medium (AAWS-M)) and the Anti-Armor Weapon System - Heavy (AAWS-H). The Javelin weapon system will provide the Marine Corps and Army with a state-of-the-art capability to destroy sophisticated and future armored threats. No such medium anti-armor system is currently available to the infantryman. The AAWS-H is a long range, antitank weapon system that will replace the TOW Missile system. It will satisfy an operational requirement to provide increased range (4000 meters), increased lethality against all armored threats, to include explosive reactive armor, active protection, increased probability of hit and kill and increased gunner survivability. Additional possible applications include LAV-AT and AAAV usage, thus promoting commonality between Marine Corps' systems.

1. (U) FY 1996 ACCOMPLISHMENTS:

- ✓ (U) (\$78) Continued to monitor the joint Javelin program and participate in follow-on testing.
- ✓ (U) (\$22) Updated Javelin Milestone III documentation and prepared Marine Corps Acquisition Decision Memorandum (MCADM) documentation.
- ✓ (U) (\$232) Monitored and participated in Javelin Production Qualification Test (PQT) and engineering changes to include warhead improvements.
- ✓ (U) (\$6) Monitored necessary logistics aspects of the joint Javelin program.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: The LW155 is the replacement for the aging, operationally deficient M198 155mm Howitzer for both the Marine Corps and the Army. The LW155 will weigh 9,000 pounds, (approximately one-half the weight of its predecessor) and will offer significant strategic and tactical mobility improvements. The LW155 program is a cooperative joint program. The Joint Operational Requirements Document (JORD) was approved by the Assistant Commandant of the Marine Corps on 27 June 1995. The document was validated and approved by the Army on 29 September 1995. A MS I/II MCPDM was approved on 23 January 1996. A "shoot-off" in 1996 leads to source selection in March 1997 of a single contractor for EMD.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

✕ (U) (\$4,030) Conducted component technology and prototype evaluation/testing.

✕ (U) (\$5,797) Conducted system development.

✕ (U) (\$800) Conducted Source Selection Board of prototype test participants.

✕ (U) (\$1,100) Provided government Project Management Office support

(U) Adjustments from FY 1997 PRESBUD:	-215	+2,064	+5,076	+4,038
(U) FY 1998 President's Budget:	14,392	13,269	35,303	33,915

(U) CHANGE SUMMARY EXPLANATION:

(U) Funding: FY 1996 decrease is due to an SBIR transfer and other miscellaneous adjustments. FY 1997, 1998 and 1999 increases are based on a revised Life Cycle Cost Estimate validated by the Navy Center for Cost Analysis and approved at a MS II Decision on 23 January 1996.

(U) Schedule: Unchanged. See attached Program Schedule.

FY 1998 RDT&E, N BUDGET ITEM JUSTIFICATION SHEET DATE: February 1997

BUDGET ACTIVITY: 4 PROGRAM ELEMENT: 0603635M PROJECT NUMBER: C2113
 PROGRAM ELEMENT TITLE: Marine Corps Ground Combat/ Supporting Arms Systems PROJECT TITLE: Predator/Short Range Assault Weapon (SRAW)

PROJECT NUMBER & TITLE	FY 1996 ACTUAL	FY 1997 ESTIMATE	FY 1998 ESTIMATE	FY 1999 ESTIMATE	FY 2000 ESTIMATE	FY 2001 ESTIMATE	FY 2002 ESTIMATE	FY 2003 ESTIMATE	TO COMPLETE	TOTAL PROGRAM
C2113 Predator Short Range Assault Weapon (SRAW)	33,542	27,716	730	0	0	0	0	0	0	118,422

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: Predator (SRAW) will provide the Marine Corps with a lethal, disposable, fire and forget, top-attack, soft launch for firing from enclosed spaces, proliferable, accurate, night vision capable, lightweight, main battle tank killer. Modularity of the system will allow development of optimal warheads (flame, bunker-busting, multi-purpose) to fit on the flight module.

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$28,542) Continued Engineering and Manufacturing Development (EMD) phase of program and conducted Critical Design Review (CDR).
- (U) (\$1,500) Began Developmental Testing (DT).
- (U) (\$3,500) Built test models.

2. (U) FY 1997 PLAN:

- (U) (\$17,465) Continue EMD phase of program.
- (U) (\$2,700) Complete DT.
- (U) (\$2,700) Begin Operational Test (OT).
- (U) (\$4,296) Forward finances efforts in FY 1998 within this project.
- (U) (\$555) SBIR: Portion of program reserved for Small Business Innovation Research assessment in accordance with 15 U.S.C. 638 (f)(1).

BUDGET ACTIVITY: 4 PROGRAM ELEMENT: 0603635M PROJECT NUMBER: C2113
 PROGRAM ELEMENT TITLE: Marine Corps Ground Combat/ Supporting Arms Systems PROJECT TITLE: Predator/Short Range Assault Weapon (SRAW)

3. (U) FY 1998 PLAN:

- (U) (\$200) Complete OT. This effort partially financed with \$300 of FY 1997 funds for this project.
- (U) (\$ 50) Complete EMD phase of program. This effort partially financed with \$3996 of FY 1997 funds from this project.
- (U) (\$480) Achieve Milestone III Approval for Service Use.
- (U) This program completes in FY 1998.

B. (U) PROGRAM CHANGE SUMMARY:

	<u>FY 1996</u>	<u>FY 1997</u>	<u>FY 1998</u>	<u>FY 1999</u>
(U) FY 1997 President's Budget:	30,545	32,257	457	0
(U) Adjustments from FY 1997 PRESBUDG:	+2,997	-4,541	+273	0
(U) FY 1998 President's Budget:	33,542	27,716	730	0

(U) CHANGE SUMMARY EXPLANATION:

(U) Funding: FY96 funding increase due to cost growth and rate changes on the prime contract. FY 1996 partially out of phase with work planned resulting in a shortfall in FY 1996 and an overage in FY 1997. FY98 R&D required to finish the EMD phase, achieve Milestone III decision, and to conduct contracting activities associated with awarding a production contract.

NOTES: Additional reductions due to DBOF, NON-FFRDC, General Reduction, Budget Resolution, and SBIR

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This program develops, demonstrates and validates key advanced equipment and enabling technologies for Logistics/Combat Service Support of future amphibious and expeditionary missions across the crisis/operational spectrum encompassing Other Expeditionary Operations (OEO), Operations Maneuver from the Sea (OMFTS), and Sustained Operation Ashore (SOA). Multiple transitions from 6.3 technology development and demonstration are planned. Equipment development is focused on Marine Corps Combat Service Support Command and Control (MCSSC2) with integrated recording and tracking technologies for Total Asset Visibility (TAV), expeditionary container transporter concepts for fielding of an Improved Tactical Container Handler (ITCH), enabling concepts for sea-basing logistics that improve both sea-surface (Logistics Container Transporter-LCT) and aerial resupply transport mechanisms. Enhanced capabilities for execution of amphibious/naval expeditionary logistics/CSS are vital to the readiness of the Marine Corps as our nations forward deployed contingency force.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 Accomplishments: FY 1996 funding is contained in PE 0603640M, Marine Corps Advanced Technology Demonstrations.

(U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This is a Joint Service Program. This program provides for the development of Explosive Ordnance Disposal tools and equipment for use by all military services. The responsibility is assigned to the Navy as single service manager, by Department of Defense Directive 5160.62 of 26 April 1989, for management of the Joint Service Explosive Ordnance Disposal Research and Development Program. Increasing types of foreign and domestic weapons necessitate a continuing development program to provide Explosive Ordnance Disposal personnel of all military services with the special equipment and tools required to support this mission. This program also provides life support related equipment necessary to support the performance of Navy Explosive Ordnance Disposal tasks underwater. This equipment must have inherently low acoustic and magnetic signatures in order to allow the Explosive Ordnance Disposal technician to safely approach, render safe and dispose of sea mines and other underwater ordnance.

(U) JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under DEMONSTRATION & VALIDATION because it develops and integrates hardware for experimental test related to specific ship or aircraft applications.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: Provides Explosive Ordnance personnel of all military services with the specialized equipment and tools required to support their mission of detection, location, identification, rendering safe, recovery, field and laboratory evaluation, and final disposal of nuclear, conventional, chemical, and biological munitions, including improvised explosive devices.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$800) Initiated Main Charge Disrupter (MCD), formerly Remote Firing Device.
- (U) (\$106) Completed critical design review on MODS project.
- (U) (\$1,594) Obtained Milestone II for Remote Ordnance Neutralization System (RONS) project and initiated the Classified Project. (\$457) Forward financing FY 97 requirements due to low expenditures in FY 95 and FY 96.
- (U) (\$2,085) Obtained Milestone I decision for (Lightweight Disposable Disrupter (LIDD) and Milestone I/II decision for Advanced Radiographic System (ARS) project. (\$210) Forward financing FY 97 requirements due to low expenditures in FY 96.

DATE: February 1997

BUDGET ACTIVITY: 4

PROGRAM ELEMENT: 0603654N

PROJECT NUMBER: Q0377

PROGRAM ELEMENT TITLE: Joint Service Explosive Ordnance Disposal Development
PROJECT TITLE: Joint Service Explosive Ordnance Disposal System

2. (U) FY 1997 PLAN:

- (U) (\$1,388) Continue development of RONS and Classified Project I. (\$363) Forward finance for FY 98 requirements due to low execution rates.
- (U) (\$1,086) Initiate DT-II on ARS project.
- (U) (\$1,184) Initiate DT-IB on LIDD and DT-II on MCD projects.
- (U) (\$25) Improved Ordnance Locator (IOL) project.

3. (U) FY 1998 PLAN:

- (U) (\$1,460) Obtain Milestone III decision for ARS project and Classified Project I and Milestone II decision for LIDD.
- (U) (\$2,570) Continue development of the RONS and MCD projects.
- (U) (\$690) Initiate the Classified Project II project.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: Provides for development of diving equipment and explosive charges to support Explosive Ordnance Disposal (EOD) underwater operation. The equipment must have inherently low acoustic and magnetic signatures in order to allow the EOD technician to safely approach, render safe, and dispose of sea mines and other underwater ordnance. Provides support for the Navy's high priority mission of Very Shallow Water Mine Countermeasures, including clandestine reconnaissance, in support of amphibious operations.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$1,374) Continued development of equipment which improves diver capability and endurance.
- (U) (\$504) Continued development of a non-magnetic underwater lift system.
- (U) (\$515) Continued development of a non-magnetic acoustic firing device.
- (U) (\$1,300) Support procurement, testing and maintenance of commercial, prototypical equipment for the VSW MCM Test Detachment.

4. (U) FY 1999 PLAN:

- (U) (\$323) Continue developing equipment which improves diver capability and endurance.
- (U) (\$400) Continue developing a non-magnetic acoustic firing device.
- (U) (\$839) Continue developing non-magnetic diver held underwater equipment to detect objects in the water column.
- (U) (\$300) Continue developing non-magnetic diver underwater navigation system compatible with GPS.
- (U) (\$309) Develop low influence underwater diver mounted display which will provide video interface with other EOD systems (Underwater Imaging System, Underwater Navigation System and MK 16 UBA).
- (U) (\$468) Develop non-magnetic underwater vehicle to transport EOD diver and associated equipment in support of EOD operations.
- (U) (\$2,967) Continue to develop, test and gain approval for fleet use of specialized equipment to support the Very Shallow Water Mine Countermeasures unit.

										CONT.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: Cooperative Engagement Capability (CEC) significantly improves Battle Force Anti-Air Warfare (AAW) capability by coordinating all Battle Force AAW sensors into a single, real-time, composite track picture having fire control quality. CEC distributes sensor data from each ship and aircraft, or cooperating unit (CU), to all other CUs in the battle force through a real-time, line of sight, high data rate sensor and engagement data distribution network. CEC is highly resistant to jamming and provides accurate gridlocking between CUs. Each CU independently employs high capacity, parallel processing and advanced algorithms to combine all distributed sensor data into a fire control quality track picture which is the same for all CUs. CEC data is presented as a superset of the best AAW sensor capabilities from each CU, all of which are integrated into a single input to each CU's combat weapons system. CEC will significantly improve our Battle Force defense in depth, including both local area and ship defense capabilities against current and future AAW threats. Moreover, CEC will provide critical connectivity and integration of over-land air defense systems capable of countering emerging air threats, including land attack cruise missiles, in a complex littoral environment.

(U) CEC consists of the Data Distribution System (DDS), the Cooperative Engagement Processor (CEP), and Combat System Modifications. The DDS encodes and distributes ownship sensor and engagement data, is a high capacity, jam resistant, directive system providing a precision gridlocking and high throughput of data. The CEP is a high capacity distributed processor which is able to process force levels of data in a timely manner that allows its output to be considered real-time fire control data. This data is passed to the ship's combat system as fire control quality data for which the ship can cue its onboard sensors or use the data to engage targets without actually tracking them.

(U) Project U2039 transferred from Program Element 0603755N beginning in FY 1998.

(U) JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under ENGINEERING AND MANUFACTURING DEVELOPMENT because it encompasses engineering and manufacturing development of new end-items prior to production approval decision.

(U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This program develops processes, prototype hardware, systems and operational procedures that will allow the Navy to operate in the U.S., foreign and international waters, air, space, and land areas while complying with U.S. statutes and international agreements. The program also includes efforts to improve the Navy's response to salvage-related pollution incidents. Projects support the Navy's requirement to meet environmental standards outlined by Environmental Protection Agency Executive Order 12088 of October 1978, The Act to Prevent Pollution from Ships, 1993 Amendment and DoD Directive 6050.4 of 16 March 1982, DoD Directive 4210.15 of 27 July 1989, DoD Directive 6050.15 of 14 June 1985, and DoD Directive 6050.9 of 13 February 1989. Project S0401 supports RDT&E efforts that allow the Navy to be in compliance with existing and anticipated laws with regard to four major areas: 1) ozone depleting substances, 2) solid waste, 3) liquid waste, and 4) hazardous and other ship wastes. Project W2210 supports development of environmental systems for naval aviation operations to enable compliance with environmental laws and regulations and minimize the cost associated with environmental compliance. Project Y0817 supports and validates development of technologies to enable facilities to comply with environmental laws and regulations in a cost effective manner.

(U) JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under DEMONSTRATION & VALIDATION because it develops and integrates hardware for experimental test related to specific ship or aircraft applications.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: Project develops equipment and procedures for managing shipboard waste. Emphasis is on developing shipboard systems to enable compliance with national, state, and international regulations and on achieving an affordable pollution-free profile for future ships and submarines. This program also develops conservation technologies and ozone-safe replacement chemical technologies for Navy solvents and shipboard refrigeration and firefighting systems.

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$14,880) Ozone Depleting Substances(ODS) - Continued development of backfit modification kits for two surface ship 200-ton CFC-114 air conditioning plant designs. Continued development of backfit modification kits for surface ship 300-ton CFC-114 air conditioning plant designs. Continued development of backfit modifications for other surface ship CFC-114 air conditioning systems. Continued development of future fleet non-chlorofluorocarbon 125-ton twin screw air conditioning plant prototype. Continued development of a future fleet non-chlorofluorocarbon 200-ton centrifugal air conditioning plant and 1.5-ton refrigeration plant. Continued development of Alternative Fire Fighting Agent Delivery Systems (AFFADS) for new ship construction. Evaluated promising alternative non-ozone depleting firefighting technologies from science and technology programs. Continued development of alternative solvents and processes for oxygen systems cleaning applications.
- (U) (\$20,840) Integrated Liquid Wastes - Initiated support of rulemaking process with the Environmental Protection Agency (EPA) in the development of Uniform National Discharge Standards (UNDS) for liquid waste discharges from naval vessels. Continued development of shipboard integrated liquid waste treatment system including the following: completed shipboard test and evaluation of a breadboard membrane oily waste polishing system and initiate and completed development of advanced development model and initiate shipboard testing,

PROGRAM ELEMENT TITLE: Environmental Protection

PROJECT TITLE: Shipboard Waste Management

initiated evaluation of alternative Sorbent Based Oily Waste Polishing System (SBOWPS); continued test and evaluation of breadboard graywater treatment system; upgraded shipboard vortex incinerator system modified to process graywater and oily waste concentrate in addition to sewage, and initiated development of advanced development model graywater treatment system for shipboard testing. Continued evaluation of low flow water minimization appliances, devices and marine sanitation devices. Initiated development of an advanced Oil Content Monitor (OCM). Continued investigation of fixes for Compensated Fuel Ballast Systems (CFBS) primarily through development of a computational fluid dynamics model and scale model testing. Initiated investigation of improved bilge detergents.

- (U) (\$7,000) Solid Wastes - Performed studies supporting 1996 and 1997 Reports to Congress on plan to comply with special area provisions of the International Convention for the Prevention of Pollution from Ships (MARPOL), Annex V, and the associated Environmental Impact Statement (EIS) for Navy Solid Waste Management Plan. Continued test and evaluation of prototype solid waste processing equipment for surface ships.

- (U) (\$7,587) Hazardous and Other Major Ship Wastes - Continued shipboard hazardous waste substitution and elimination program. Initiated investigations and evaluations of shipboard Pollution Prevention (P2) equipment to identify their high potential for Fleet hazardous material and cost reduction. Initiated investigation, test and evaluation of non-asbestos (Non-Asb) substitute gaskets, packing and brake/clutch faces used in shipboard machinery. Initiated laboratory testing on compliant commercial paints to ensure that environmental regulatory limits for Volatile Organic Compound (VOC) content, Hazardous Air Pollutants (HAP) as well as heavy metal and toxic contaminants are met. Continued development of Recovered Oil Logistic System (ROLS); continued development of a Computer Based Contingency Planning System (CBCPS); continued development of In-Situ Oil Burning Techniques (ISOBS); and initiated development of the Oil Outflow and Salvage Response Analysis Program (OOSRAP).

2. (U) FY 1997 PLAN:

- (\$11,715) Ozone Depleting Substances - Convert first submarine CFC-12 refrigeration plant to HFC-134a and related equipment modifications for at-sea testing and evaluation. Complete development of backfit modification kits for two surface ship 200-ton CFC-114 air conditioning plant designs. Continue development of backfit modification kits for a 300-ton surface ship CFC-114 air conditioning plant designs. Initiate development of backfit modification kit for a third surface ship 200-ton CFC-114 air conditioning plant design. Continue development of the backfit modification kit for the surface ship 125-ton CFC-114 air conditioning plant design. Continue

PROGRAM ELEMENT TITLE: Environmental Protection PROJECT TITLE: Shipboard Waste Management

development of backfit modifications for other surface ship air conditioning systems. Begin efforts to perform one-year at-sea ship test of HFC-236fa backfit modifications on shipboard 200-ton CFC-114 plants. Continue development of future fleet non-chlorofluorocarbon 125-ton twin screw air conditioning plant prototype. Continue development of future fleet non-chlorofluorocarbon 200-ton centrifugal air conditioning plant and 1.5-ton refrigeration plant; begin laboratory evaluations of prototype hardware. Continue development of alternate solvents and processes for oxygen systems cleaning applications. Continue development of AFFADS for new ship construction. Evaluate promising alternative non-ozone depleting substances firefighting technologies from science and technology community.

- (U) (\$18,639) Integrated Liquid Wastes - Continue support of rulemaking process with the Environmental Protection Agency (EPA) in the development of Uniform National Discharge Standards (UNDS) for liquid waste discharges for Navy vessels. Continue development of shipboard integrated liquid waste treatment system including the following: continue development of membrane oily waste polishing systems; continue development of improved bilge cleaning detergents and advanced oil content monitor; continue test and evaluation of breadboard graywater treatment system and development of an advanced development model graywater treatment system; continue testing upgraded vortex incinerator system; continue investigating design fixes for shipboard compensated fuel ballast systems and initiate development of sectional full scale model system. Initiate testing of Non-Seeping Grease Seal (NSGS) on submarine dive and steering gear.
- (U) (\$4,636) Solid Wastes - Complete effort supporting Reports to Congress on plan to comply with special area provisions of the International Convention for the Prevention of Pollution from Ships (MARPOL), AnnexV. Initiate development of management practices and systems for plastics for submarine application. Complete support for Environmental Impact Statement (EIS) for Navy Solid Waste Management Plan for surface ships. Initiate and complete Environmental Assessment (EA) for Navy Solid Waste Management plan for submarines. Continue test and evaluation of prototype solid waste processing equipment for surface ships.
- (U) (\$3,600) Hazardous and Other Major Ship Wastes - Continue shipboard hazardous waste substitution and elimination task and continue T&E of pollution prevention equipment aboard ship. Continue investigation of non-asbestos substitutes and initiate preparation of a final report and substitute specifications. Continue quality assurance testing on reformulated commercial paints. Continue development of Recovered Oil Logistics System; continue development of Computer Based Contingency Planning System; continue development of In-Situ Oil Burning System; and continue development of the Oil Outflow and Salvage Response Analysis program.

- (U) (\$238) Portion of extramural program reserved for Small Business Innovation Research (SBIR) assessment in accordance with 15 U.S.C.638.
- 3. (U) FY 1998 PLAN:
 - (U) (\$9,405) Ozone Depleting Substances - Complete development of a backfit modification kit for surface ships 300-ton CFC-114 air conditioning plant designs. Continue development of backfit modification kit for a third surface ship 200-ton CFC-114 air conditioning plant design. Continue development of backfit modification kit for the surface ship 125-ton CFC-114 air conditioning plant design. Continue development of backfit modification kit for surface ship 150-ton CFC-114 air conditioning plant design. Continue development of backfit modifications for other surface ship air conditioning plant designs. Modify shipboard 200-ton CFC-114 air conditioning plants onboard one ship to HFC-236fa for one-year at-sea ship test. Complete development of future fleet non-chlorofluorocarbon 125-ton twin screw air conditioning plant, 200-ton centrifugal air conditioning plant and 1.5-ton refrigeration plant prototypes. Continue development of alternative solvents and process for oxygen systems cleaning applications. Complete development of AFFADS for new ship construction. Evaluate next-generation non-ozone depleting fire suppression technologies.
 - (U) (\$18,328) Integrated Liquid Wastes - Continue support of rulemaking process with the Environmental Protection Agency (EPA) in the development of Uniform National Discharge Standards (UNDS) for liquid waste discharges from Navy vessels. Continue development of integrated liquid waste treatment system including: complete development of Membrane Oily Waste Polishing Systems (MOWPS), initiate shipboard evaluation of advanced development model graywater treatment system, continue test and evaluation of upgraded shipboard vortex incinerator with emphasis on evaporation/incineration of all concentrated ship liquid wastes (multifunctional) and continue development of design fixes for compensated fuel ballast systems. Complete testing of Non-Seeping Grease Seal (NSGS) on submarine dive and steering gear.
 - (U) (\$6,432) Solid Wastes - Continue development of management processes and systems for plastics for submarine application. Complete evaluation of prototype solid waste processing equipment on surface ships. Initiate development of a pulper for submarine application.

PROJECT TITLE: Shipboard Waste Management

- (U) (\$8,116) Hazardous and Other Major Ship Wastes - Continue shipboard hazardous waste substitution and elimination task and continue T&E of pollution prevention equipment aboard ship. Complete investigation of Non-Asbestos Substitutes (NAS) and issue final report. Continue quality assurance testing on reformulated commercial paints. Continue development of Recovered Oil Logistics System; continue development of Computer Based Contingency Planning System; complete development of In-Situ Oil Burning System (ISOBS); complete development of the Oil Outflow and Salvage Response Analysis Program (OOSRAP); initiate development of Remotely Operated Under Water Tank Access System (HotTap); and initiate development of the Oil and Skimmer Tracking System; initiate development of technology necessary to reduce nitrous oxide emissions from Navy gas turbine engines.

4. (U) FY 1999 PLAN:

- (U) (\$8,713) Ozone Depleting Substances - Complete development of backfit modification kit for a third surface ship 200-ton CFC-114 air conditioning plant design. Complete development backfit modification kit for the surface ship 125-ton CFC-114 air conditioning plant design. Complete development of backfit modification kit for surface ship 150-ton CFC-114 air conditioning plant design. Continue development of backfit modification kits for surface ship 250-ton and 363-ton CFC-114 air conditioning plant designs. Continue development of backfit modifications for remaining surface ship 200-ton and 250-ton CFC-114 air conditioning plants designs. Complete one-year at-sea ship test of HFC-236fa backfit modifications in 200-ton CFC-114 air conditioning plants. Complete development of alternative solvents and processes for oxygen systems cleaning applications. Continue evaluating next-generation non-ozone depleting fire suppression technologies.
- (U) (\$19,915) Integrated Liquid Wastes - Continue support of rulemaking process with the Environmental Protection Agency (EPA) in the development of Uniform National Discharge Standards (UNDS) for liquid waste discharges from navy vessels. Continue development of integrated liquid waste treatment system including: complete shipboard evaluation of advanced development model graywater treatment system and continue development of prototype graywater/sewage treatment system; continue development of multifunctional shipboard evaporation/incineration for all concentrated ship liquid wastes and continue development of design fixes for compensated fuel ballast systems.
- (U) (\$6,136) Solid Wastes - Continue development of management processes and systems for plastics for submarine application. Continue development of a pulper for submarine application.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This project supports development and implementation of technologies which will lead to environmentally safe naval aviation operations and support; compliance with international, federal, state, and local regulations and policies; reduction of increasing compliance costs and personal liability; and enhancement of naval aviation mission effectiveness. Naval aviation pollution prevention efforts were previously supported by Project Y0817, Pollution Abatement Ashore. This project will support that part of project Y0817 that addressed aviation pollution prevention technologies as well as additional operational and shipboard aviation requirements previously unsupported.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$1,443) Developed and tested: Alternatives for cadmium, chromium, and cyanide plating; nonchromate aluminum pretreatment; non-hazardous chemical paint stripping processes; compliant solvents and cleaners; blast media treatment processes; molten salt bath plating process; zinc-nickel and tin-zinc alternates to cadmium plating; and nonchromated sealants.
- (U) (\$161) Optimized low volatility diluents and non-toxic corrosion control pigments.
- (U)(\$150) Demonstrated performance of water-borne topcoat.

PROJECT NUMBER: W2210

PROGRAM ELEMENT TITLE: Environmental Protection

PROJECT TITLE: Environmental Compliance

2. (U) FY 1997 PLAN:

- (U) (\$1,202) Continue to develop and test: Alternatives for cadmium, chromium, and cyanide plating, nonchromate coatings, surface pretreatments, non-hazardous aircraft paint stripping processes; compliant solvents and cleaners; blast media treatment processes; and nonchromated sealants.
- (U) (\$121) Evaluate alternative aircraft materials and processes to eliminate or reduce the emission of hazardous materials.
- (U) (\$80) Continue to demonstrate performance of water-borne topcoat. Develop and test hazardous operational chemical and material alternatives.
- (U) (\$15) Portion of extramural program reserved for Small Business Innovation Research assessment in accordance with 15 U.S.C. 638.

3. (U) FY 1998 PLAN:

- (U) (\$1,715) Continue to develop and test: Alternatives for cadmium, chromium, and cyanide plating nonchromate aluminum pretreatments, and sealants; non-hazardous chemical paint stripping processes; alternative non-hazardous solvents and cleaners. Develop and test low/non-volatile organic compound coatings; and non-hazardous corrosion control materials and processes.
- (U) (\$355) Continue to evaluate alternative aircraft materials, processes, and systems to eliminate or reduce the emission of hazardous materials.
- (U) (\$524) Continue to demonstrate performance of water-borne topcoats. Develop and test hazardous operational chemical and material alternatives.

 PROJECT TITLE: Environmental Compliance

4. (U) FY 1999 PLAN:

- (U) (\$2,426) Continue to develop and test: Alternatives for cadmium, chromium, and cyanide plating nonchromate aluminum pretreatments, and sealants; non-hazardous chemical paint stripping processes; alternative non-hazardous solvents and cleaners; low/non-volatile organic compound coatings; and non-hazardous corrosion control materials and processes.
- (U) (\$869) Continue to evaluate alternative aircraft systems to eliminate or reduce the emission of hazardous materials.
- (U) (\$930) Continue to demonstrate performance of water-borne topcoats. Develop and test hazardous operational chemical and material alternatives. Develop and demonstrate technologies for control of ordnance and composite material emissions.

B. (U) PROGRAM CHANGE SUMMARY:

	<u>FY 1996</u>	<u>FY 1997</u>	<u>FY 1998</u>	<u>FY 1999</u>
(U) FY 1997 President's Budget:	1,756	1,477	2,058	2,500
(U) Adjustment from FY 1997 PRESBUDG:	-2	-59	+536	+1,725
(U) FY98/99 PRESBUDG Submit:	1,754	1,418	2,594	4,225

(U) CHANGE SUMMARY EXPLANATION:

(U) Funding: The FY 1996 decrease of \$2K reflects a minor pricing adjustment. The FY97 decrease of \$59K reflects Congressional undistributed reductions. The FY 1998 increase of \$536K consists of: an increase of \$13K for Navy Working Capital Fund (NWCf) rate restored and an increase of \$523K for other minor pricing adjustments. The FY 1999 increase of \$1,725K consists of: an increase of \$1,767K for Shore Environmental Quality and an increase of \$53K for NWCf rate restoral partially offset by decreases of \$95K for other minor pricing adjustments.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This project develops and validates new technologies needed to address pervasive Navy shoreside environmental requirements imposed on Naval shore activities by the need to comply with environmental laws, regulations, orders, and policies. The goal of the program is to minimize personnel liabilities, operational costs, and regulatory oversight while preserving or enhancing the ability of Naval shore activities to accomplish their required missions and functions. Each project task addresses one or more of the requirements from the Navy Environmental Quality RDT&E Strategic Plan dated October 1994.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$1,350) Ship Repair/Deactivation Operations - Completed development of a treatment system for sodium nitrite wastewater generated during marine steam boiler maintenance operations. Continued development of the Ultra High Pressure Waterjet System. Began: a) effort to quantify hexavalent chromium emissions from shipyard welding operations needed to identify commercial off the shelf (COTS) alternatives to reducing emission levels, b) development of system to recycle the mixture of concentrated citric acid and triethonalamine that is used to derust ship bilges and tanks; and c) identification of candidate technologies to reduce the cost for the removal and disposal of materials contaminated with polychlorinatedbiphenyls (PCBs) from deactivated Navy submarines.

- (U) (\$0) Ordnance Manufacture/Testing Operations - During the FY 1997 budget development process, a decision was made to consolidate oversight and execution management of ordnance related environmental protection technologies under this project. FY 1996 was the year of transition and both Y0817 and S0400 ordnance tasks were funded by the

DATE: February 1997

final year of funding for Project S0400. Completed validations previously funded under this project: a) use of the Catalyzed Electrochemical Oxidation (CEO) process to dispose of the OTTO fuel used in torpedoes, and b) a joint project with the Army demonstrating the use of a bioreactor to treat Propylene Glycol Dinitrate contaminated wastewater. Continued development of a Rocket Motor Exhaust Gas Scrubber for small rocket motor test firings. Began development of a Confined Burn Facility that will provide an environmentally compliant alternative to the Open Burn/Open Detonation (OB/OD) disposal of ordnance.

- (U) (\$1,862) Other Industrial Operations - Completed validation of: a) a system to reduce Nitrous Oxide emissions from diesel generators in the Navy's Mobile Utilities Support Equipment (MUSE) inventory by allowing them to use natural gas as an alternative fuel. Began development of a ceramic crossflow ultrafiltration (CCF) system to recycle contaminated aqueous degreasing agents.
- (U) (\$1,780) Non-Industrial Processes - Began development of a) sound propagation algorithms for Navy-unique scenarios needed to adapt existing Tri-Service noise models for Navy use in assessing and reducing the noise impacts of Navy operations in coastal areas on nearby communities; b) a modified QWIKLITE rapid marine bioassay system for use with contaminated marine sediments that uses the natural bioluminescence of marine organisms as the indicator; and c) systems to reduce the volume and the disposal costs of Aqueous Film Forming Foam (AFFF) wastes generated by the testing of firefighting equipment.
- (U) (\$555) Hazardous Waste Minimization/Disposal - Began project to accelerate validation of emerging lower-cost hazardous waste disposal technology to reduce Navy disposal costs by 50% by gathering technical, economic, and regulatory performance data for characteristic Navy wastes from a range of ongoing and planned demonstrations by other agencies and industry. Efforts included treatability tests to determine if the Molten Salt Oxidation process is a viable alternative for shoreside hazardous waste destruction and participating in the Environmental Security Technology Certification Program (ESTCP) project to validate the use of Plasma Arc technology to destroy shoreside hazardous wastes.

2. (U) FY 1997 PLAN:

- (U) (\$1,803) Ship Repair/Deactivation Operations - Complete validation of a closed cycle Ultra High Pressure Waterjet System for ship paint removal and surface preparation with on-demand garnet abrasive injection and recovery. Conduct evaluation testing of alternative technologies for the cost effective removal and disposal of polychlorinatedbiphenyl (PCB) contaminated materials from deactivated Navy submarines. Begin a broader analysis to determine best removal processes and disposal technologies for hazardous materials removed during ship deactivations. Materials include lead and chrome in paints, asbestos, and a variety of fluids used in shipboard machinery.
- (U) (\$1,150) Ordnance Manufacture/Testing Operations - Complete validation of a 5 pound/second capacity Rocket Motor Exhaust Gas Scrubber prototype. Continue development of the Confined Burn Facility.
- (U) (\$1,195) Other Industrial Operations - Complete validation of: a) leak detection system for the 12 million gallon capacity underground fuel storage tanks at the Fleet and Industrial Supply Center (FISC) Red Hill facility; b) leak detection and locating (LDL) systems for underground high capacity fuel distribution pipelines; c) new low Volatile Organic Compound (VOC) lining systems for use in concrete and steel POL tanks.
- (U) (\$1,277) Non-Industrial Processes - Complete validation of: a) alternative affordable capping methods for coastal landfills in high precipitation areas where contaminated leachate production is a problem; b) DOD noise model enhancements for Navy-unique operational scenarios; c) the use of X-Ray Fluorescence for the on-site measurement of metal contaminated sediments; d) a system for the direct in-situ measurement of contaminant transport between marine sediments and the overlying water mass; and e) Aqueous Film Forming Foam (AFFF) control and disposal system for wastes generated by firefighting equipment testing. Begin development of: a) a sensor and analysis program for the Site Characterization and Analysis Probe System (SCAPS) that will enable the system to be used to assess the subsurface transport characteristics of a contaminated site; and b) a concept from the Navy Exploratory Development R&D program for a premixing combustion technique that will minimize air emissions from Fire Fighter Training Facilities without sacrificing training realism.
- (U) (\$720) Hazardous Waste Minimization/Disposal - Complete: a) shoreside hazardous waste destruction analysis that will identify the characteristics of Navy hazardous waste streams, capabilities of emerging technologies,

and the suitability of alternative acquisition plans; b) validation of the process of using physical separation techniques to reduce the volume of contaminated dredge spoil; and c) treatability testing of the Molten Salt Oxidation process. Continued participation in the Environmental Security Technology Certification Program s shoreside Plasma Arc project.

- (U) (\$33) Portion of extramural program reserved for Small Business Innovation Research in accordance with 15 U.S.C. 638.

3. (U) FY 1998 PLAN:

- (U) (\$1,925) Ship Repair/Deactivation Operations - Complete validation of: a) alternative technologies for the cost effective removal and disposal of polychlorinatedbiphenyl (PCB) contaminated materials from deactivated Navy submarines; and b) system to recycle derusting chemicals used for ship bilges and tanks. Conduct evaluation testing of alternative hazardous material removal processes and disposal technologies for ship deactivations.
- (U) (\$1,513) Ordnance Manufacture/Testing Operations - Complete validation of a 10 pound capacity Confined Burn Facility prototype. Continue development of the Rocket Motor Exhaust Gas Scrubber.
- (U) (\$1,710) Other Industrial Operations - Complete validation of a ceramic crossflow ultrafiltration (CCF) system for contaminated aqueous degreasing agents. Continue development of a low air emission fire simulator for Fire Fighter Training Facilities.
- (U) (\$1,338) Non-Industrial Processes - Completed validation of: a) rapid cost effective assessment approach for marine contaminants by measuring sublethal cellular level indicators of contaminant exposure; b) a monitoring system to rapidly detect pierside oil spills; and c) the use of constructed coastal wetlands to control nonpoint source pollution control for Naval activities. Begin development of: a) non-polluting method for the cleaning of electrical switchgear while still energized; and b) an integrated approach to the contamination assessment and treatability characterization of coastal and harbor sediments.
- (U) (\$1,040) Hazardous Waste Minimization/Disposal - Completed participation in the Environmental Security Technology Certification Program s shoreside Plasma Arc project. Begin: a) effort to provide an economical and transportable asbestos vitrification system having a unit acquisition cost below \$450K; and b) containment and

cleaning approaches to minimize the hazardous wastes generated cleaning fuel and oil from airfield pavements. Army participation will be sought for the first project and Air Force participation will be sought for the second.

4. (U) FY 1999 PLAN:

- (U) (\$2,385) Ship Repair/Deactivation Operations - Complete validation of alternative hazardous material removal processes and disposal technologies for ship deactivations that can be provided based on commercial off the shelf (COTS) alternatives. Continue development of removal processes and disposal technologies that cannot be provided based on (COTS) alternatives.
- (U) (\$2,506) Ordnance Manufacture/Testing Operations - Complete validation of a 80 pound/second capacity Rocket Motor Exhaust Gas Scrubber prototype and a 100 pound capacity Confined Burn Facility prototype.
- (U) (\$1,777) Other Industrial Operations - Complete development of non-polluting method for the cleaning of energized electrical switchgear. Complete development of a low air emission fire simulator for Fire Fighter Training Facilities.
- (\$1,400) Non-Industrial Processes - Complete validation of: a) a modified QWIKLITE rapid marine bioassay system for marine sediments; and b) the subsurface transport sensor and analysis program for the SCAPS. Continue development of integrated contamination assessment and treatability characterization approaches for marine sediments.
- (\$1,044) Hazardous Waste Minimization/Disposal - Complete development of: a) a transportable asbestos vitrification system; and b) containment and cleaning approaches for airfield pavements b) aircraft fuel and oil leak containment systems and airfield. Funding of additional shoreside general hazardous waste destruction technology validations is dependent on the outcome of the FY 1997 hazardous waste disposal analysis.

(U) CHANGE SUMMARY EXPLANATION:

(U) Funding: The FY 1996 decrease of \$6K reflects a minor pricing adjustment. FY 1997 decrease of \$262K reflects Congressional undistributed reductions. FY 1998 funding is increased \$216K. The FY 1999 increase of \$1,217K is for minor pricing adjustments.

(U) Schedule Changes: Not applicable.

(U) Technical: Not applicable.

C. (U) OTHER PROGRAM FUNDING SUMMARY: Not applicable.

(U) RELATED RDT&E: This project transitions shoreside pollution abatement technologies from two Navy Science and Technology programs and the Strategic Environmental Research and Development Program (SERDP). Project funding is leveraged by transitioning technologies to the Environmental Security Technology Certification Program (ESTCP) for final certification and by providing funding for Navy participation in ESTCP projects. Execution of this

project is coordinated with related Army and Air Force programs by the Tri-Service Environmental Quality R&D Strategic Plan developed under the leadership of the Joint Engineers Management Panel (JEMP).

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This program supports projects to evaluate, adapt, and develop energy related technologies for ship, aircraft, and land-based operations to: (a) increase fuel-related weapons systems capabilities such as range and time on station; (b) conserve energy and reduce energy costs; (c) reduce Navy shore facilities dependence on petroleum fuels and apply energy technologies that improve environmental compliance; (d) relax unnecessarily restrictive fuel specification requirements to reduce cost and increase availability worldwide; (e) provide guidance to fleet operators for the safe use of commercial grade or off-specification fuels when military specification fuels are unavailable or in short supply; and (f) make needed periodic changes to fuel specifications to ensure fuel quality and avoid fleet operating problems. Through 1995, the Navy Energy R&D Program, of which this program element is a part, had produced energy cost avoidance estimated at \$130M per year (compared to 1985 consumption rates). As currently funded, additional savings of \$25M per year are projected to be achieved by FY 2000.

(U) This program, and the companion PE 0604710N, Navy Energy Program (ENG), support the achievement of Executive Department, DOD, and Navy Energy Management Goals; and also the Office of the Secretary of Defense, the Secretary of the Navy and the Chief of Naval Operations direction to make up-front investment in technologies that reduce future cost of operation and ownership of the fleet.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This project improves the energy efficiency of Navy ships, aircraft, and shore facilities and thereby contributes to reduced operating costs and improved fleet sustainability and performance. Major efforts include work to increase the efficiency of aircraft engines; develop improved hull coatings and auxiliary equipment for ships; and develop energy conservation technologies, and energy use management strategies for Navy shore facilities.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$592) Aircraft: Continued advanced control modes demonstrations for F414 engine and F/A-18 E/F airframe. Demonstrated (ground tests) advanced control logic effects on full authority digital engine control (FADEC) operation and resulting engine responses. Evaluated energy efficiency retrofit options for F/A-18 C/D. Initiated design of new high pressure turbine (HPT) for F414 growth engine (joint effort with General Electric).

BUDGET ACTIVITY: 4

PROGRAM ELEMENT: 0603724N

PROJECT NUMBER: R0829

PROGRAM ELEMENT TITLE: Navy Energy Program (ADV)

PROJECT TITLE: Energy Conservation (ADV)

- (U) (\$831) Ships: Completed design and drawings for stern flap for DD-963/CG-47 hulls to reduce powering requirements. Selected bow bulb and aft hull/propeller interaction hydrodynamic mods for TAO-187 model test to reduced powering requirements. Evaluated hull cleaning procedures for easy release silicone anti-fouling (AF) coatings. Monitored self cleaning performance of "easy release" coatings and biofilm formation resistance of ablative copper coatings "boosted" with organic cobiocides in small scale tests. Validated impeller optimization software for design of high efficiency new construction airconditioning plants which will use ozone-safe HFC-134a refrigerant.
 - (U) (\$491) Facilities: Completed development of clean steam and metered electrical power for pierside support of ships.
2. (U) FY 1997 PLAN:
- (U) (\$625) Aircraft: Complete altitude testing phase of F414 advanced control modes demonstration and develop flight test plans to demonstrate inlet distortion accommodation. Cost/benefit studies F/A-18 C/D energy efficiency options: affordable FADEC with inlet distortion model; extend flap/aileron scheduled droop to interdiction mission; and enhanced fidelity of flight path optimization system. Complete conceptual design of increased airflow/efficiency HPT for F414 growth engine. Support re-starting GE-23a Demo Engine program to develop F414 growth technologies.
 - (U) (\$1,050) Ships: Model test bow bulb and stern/propeller hydrodynamic enhancements for a TAO-187 class oiler to demonstrate reduced powering requirements. Model test stern flap retrofit for early DDG-51 s (28 ships). Continue screening tests of advanced AF materials/coating systems (expand testing of ablative copper/cobioicide paints). Develop unified Navy approach to fuel cell power generation of ship service electrical power, (ensure optimization of F76 diesel fuel, desulfurization and marinization requirements). Support design optimization of HFC 134a air conditioning plants for new construction. Support compressor design for new 125 ton HFC-236fa plant in support of R114 replacement program.
 - (U) (\$51) Portion of extramural program reserved for Small Business Innovation Research Assessment in accordance with 15 USC 638.

3. (U) FY 1998 PLAN:

- (U) (\$850) Aircraft: Flight test F414 advanced control modes system to demonstrate inlet distortion accommodation, transition to F414 engine and F/A-18 E/F airframe development programs. Support GE-23a demonstrator engine program; participate in conceptual design of advanced fan for F414 growth engine to ensure efficiency gains.
- (U) (\$1,352) Ships: Detailed design and drawings for DDG-51 retrofit stern flap (first 28 ships), and multiple TAO-187 modifications. Model tests of simple hydro mods for additional ships. Continue laboratory to bilge-keel panel tests of emerging AF coatings. Optimize tool designs for hull inspection remotely operated vehicle (ROV) for fouling assessment and spot cleaning. Support fuel cell technology demonstration for ship service power generation.

4. (U) FY 1999 PLAN:

- (U) (\$940) Aircraft: Support GE-23a demonstrator engine program; participate in low pressure turbine conceptual design for F414 growth engine to ensure efficiency improvement; continue advanced fan development. Evaluate benefits for F414 of advanced control modes technology.
- (U) (\$1,603) Ships: Select ablative copper/cobiocide paint for full hull application. Assist fleet introduction of Hull Inspection/Cleaning ROV. Continue model tests of hydrodynamic refinements to reduce powering requirements of existing/future ships. Continue fuel cell technology demonstration involvement, emphasizing fuel reformation and efficiency issues.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This project provides data through engine and fuel system tests which relate the effects of changes in Navy fuel procurement specification properties to the performance and reliability of Naval ship and aircraft engines and fuel systems. This information is required to: (a) determine the extent to which unnecessarily restrictive specification features can be relaxed to reduce cost and increase availability worldwide; (b) provide guidance to fleet operators for the safe use of off-specification or commercial grade fuels when military specification fuels are unavailable or in short supply; and (c) make needed periodic changes to fuel specifications to ensure fuel quality and avoid fleet operating problems while accommodating evolutionary changes in the fuel supply industry. Recent problems with fuel quality have adversely affected ship and aircraft system performance and reliability and resulted in degradation of fuel in storage. The resulting readiness impacts, additional maintenance costs, and the cost of lost equipment, although difficult to quantify, are many times the cost of this project. Over the next decade, the potential for fuel quality related problems will increase because of changing industry practices required to comply with new environmental regulations. This project represents the only investment designed to maintain the Navy's ability to operate as a "smart" customer for fuels that costs over \$2B per year to procure, transport, store and consume and are essential to fleet operations.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS: Not applicable.

2. (U) FY 1997 PLAN:

- (U) (\$650) Ships: Complete sample collection and characterization of commercial marine gas oils worldwide to determine quality, availability and cost. Complete analysis of Allison 501-K17/34 ship gas turbine engine (GTE) ignition, flame stability and thermal performance tests with broadened specification fuels. Initiate atmospheric burner rig tests for GTE corrosion scaling factor development. Initiate experiments to determine Navy ship fuel (F-76) lubricity characteristics using new Navy test procedures.
- (U) (\$579) Aircraft: Initiate evaluation of +100 thermal stability improving additive containing fuels at a T-45 air station. Complete full scale testing of non-toxic, environmentally friendly fuel system icing inhibitors (FSII). Develop full scale prototype of fuel copper contamination removal system. Continue development of +100 additive compatible fuel/water separation system.

3. (U) FY 1998 PLAN:

- (U) (\$890) Ships: Complete phase I of the atmospheric burner rig tests for GTE corrosion scaling factor development. Complete bench-scale diesel fuel lubricity experiments and initiate high-speed diesel engine (HDSE) validation. Initiate fuel injector experiments to quantify HSDE response to fuel thermal stability characteristics.
- (U) (\$1,067) Aircraft: Complete evaluation of +100 fuel additives on S-3 and C-130 engine systems. Field test environmentally friendly FSII. Field test fuel copper contamination removal system. Initiate test and evaluation of prototype +100 additives fuel/water separators.

4. (U) FY 1999 PLAN:

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This program provides the Navy with new civil engineering capabilities that are required to overcome specific performance limitations of Naval shore facilities while reducing the cost of sustaining the Naval shore infrastructure. The program focuses available resources on satisfying facility requirements where the Navy is a major stakeholder, there are no test validated Commercial of the Shelf (COTS) solutions available, and a timely solution will not emerge without a Navy sponsored demonstration and validation. The program completes the development and validation of facilities technologies originating in Navy Science and Technology programs plus a variety of other sources including the National Science Foundation (NSF) and the National Institute of Science and Technology (NIST). Validated technologies are implemented in the Navy's Military Construction (MILCON) and Real Property Maintenance (RPM) Programs. This program is addressing three Navy facility requirements during the years FY 1996 through FY 1999:

- (U) THE HIGH PERFORMANCE (HP) MAGAZINE. Based on current magazine technologies, substantial land areas within Naval activities cannot be used for inhabited buildings in order to satisfy Explosives Safety Quantify Distance (ESQD) arcs. The converse is also true, the Navy is not able to construct new magazines where they are needed because of the presence of inhabited buildings. This effort enables a quantification of the specific hazard scenarios capable of causing ordnance detonation, an improved capability to model an ordnance explosion in a magazine, and the innovative use of energy absorbing construction materials to provide the Navy with a new magazine concept in which the ESQD arcs are based on a Maximum Credible Event (MCE) that is not the detonation of the entire magazine but rather the detonation of the contents of one, much smaller, storage cell within the magazine. For a typical magazines with Net Explosive Weight (NEW) capacities of 250,000 pounds, the allowable ordnance storage density is increased from 370 pounds/acre to 2,222 pounds/acre. In addition, the number of incompatible classes of ordnance that can be stored in the same magazine is increased from none to eight. This will lead to lower operational costs for the Receipt, Segregation, Storage, and Issue (RSSI) of ordnance and, for some activities, a reduction in the number of magazines required to accomplish their mission.

UNCLASSIFIED

UNCLASSIFIED

FY 1998/FY 1999 RDT&E,N PROGRAM ELEMENT/PROJECT COST BREAKDOWNDATE: February 1997

BUDGET ACTIVITY: 4 PROGRAM ELEMENT: 0603725N

PROGRAM ELEMENT TITLE: Facilities Improvement

PROJECT NUMBER: Y0995

PROJECT TITLE: Navy Facilities Systems

- (U) WATERFRONT FACILITIES REPAIR AND UPGRADE. Over 75% of the Navy's waterfront facilities are over 45 years old. They were designed for a service life of no more than 25 years and to satisfy the mission requirements existing at that time of construction. The reinforced concrete used to construct nearly all of them requires costly and repetitive repairs. In addition, they are unable to satisfy new mission requirements, such as the increase in pier deck capacity required to accomplish more extensive pier-side ship maintenance and repair tasks using truck-mounted cranes that have concentrated outrigger loads of up to 120 tons on a pier originally designed for no concentrated deck loading. This effort integrates new advanced structural diagnostic and modeling capabilities with the innovative application of high performance materials and corrosion arrestment techniques to provide new methods to extend the service life of existing waterfront facilities by an additional 15 to 30 years, and to cost-effectively upgrade them to satisfy new mission requirements. Specific benefits include increasing the durability of spalled marine concrete repairs from 3 to 15 years, new longer-lasting low-maintenance fendering systems that eliminate the need for the frequent replacement of timber piles, and providing new pier upgrade alternatives costing about \$5M for a typical pier instead of the now required demolish then replace approach costing about \$30M.
- (U) FACILITY TECHNOLOGIES TO REDUCE THE REAL PROPERTY MAINTENANCE (RPM) BACKLOG. The Real Property Maintenance(RPM) costs to correct critical facility deficiencies is over \$2.0B as reported in the FY 1995 Annual Inspection Summary (AIS). Current Navy RPM funding levels are insufficient to prevent the continued growth of the critical backlog of maintenance and repairs. This effort will validate and accelerate the wide-spread implementation of a broad range of advanced facility technologies needed to overcome design and construction practices that are conservative and remain costly because of the high risk the private sector associates with the utilization of new facility technologies. The effort will accelerate the validation, commercialization, and wide-spread implementation of the facility technologies urgently required to reduce the cost of deficiencies in the Navy's RPM backlog by reducing initial construction costs up to 20% and facility component service lives that are up to 25 years longer.

(U) JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under DEMONSTRATION & VALIDATION because it completes development of technologies and verifies their application to specific ship, aircraft, or facility requirements.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

Exhibit R-2

Page 64-2 of 64-8 Pages

UNCLASSIFIED

UNCLASSIFIED

FY 1998/FY 1999 RDT&E,N PROGRAM ELEMENT/PROJECT COST BREAKDOWNDATE: February 1997

BUDGET ACTIVITY: 4 PROGRAM ELEMENT: 0603725N

PROGRAM ELEMENT TITLE: Facilities Improvement

PROJECT NUMBER: Y0995

PROJECT TITLE: Navy Facilities Systems

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$1,746) Awarded contract and started construction of the HP Magazine prototype for the full scale explosive test to certify explosives safety performance. Developed test plans for the FY 1997 certification tests of HP Magazine prototype. Conducted arena test to evaluate the fragment hazard mitigation effectiveness of prototype pit cover cross sections.
- Funds were provided to performing activity during 1st and 2nd quarters and were obligated during the same timeframe.

2. (U) FY 1997 PLAN:

- (U) (\$956) Complete construction and quality assurance of the HP Magazine prototype. Conduct operational and certification tests. Compile and analyze test data, and complete technical documentation required to obtain DOD Explosive Safety Board approval. Apply for DOD Explosive Safety Board approval.

- (U) (\$1,193) Begin demonstration and validation of advanced technologies to reduce the life-cycle costs of Navy waterfront facilities. First efforts include: a) validating a new ship berthing force analysis procedure; b) working cooperatively with manufacturers to develop hybrid fender piles using recycled plastics that can serve as the principle impact resisting component in fendering systems for Naval combatant berthing; and c) validating the use of a falling weight deflectometer to rapidly assess pier deck capacity.

Obligation of funds at 90% occurred in 1st quarter. 5% will be obligated during the 2nd quarter. 100% obligation will occur by the end of the fiscal year.

3. (U) FY 1998 PLAN:

- (U) (\$1,628) Complete design, component testing, and fabrication of prototypes for advanced fender pile and camel concepts using recycled plastic piles. Award contract for the installation of the prototypes for validation testing. Continue validation of the use of falling weight deflectometer system for load safety certification of piers and wharves.

UNCLASSIFIED

FY 1998/FY 1999 RDT&E,N PROGRAM ELEMENT/PROJECT COST BREAKDOWNDATE: February 1997

BUDGET ACTIVITY: 4

PROGRAM ELEMENT: 0603725N

PROGRAM ELEMENT TITLE: Facilities Improvement

PROJECT NUMBER: Y0995

PROJECT TITLE: Navy Facilities Systems

- (U) (\$92) Conduct an analysis of the planned FY 1999 RPM projects to determine best candidates for the FY 1999 validation testing of advanced facility technologies to reduce the RPM backlog. Coordinate with Navy RPM project managers and the Civil Engineering Research Foundation (CERF) to determine the specific objectives and schedule for the FY 1999 validation tests. Technologies to be tested include high strength lightweight concretes for severe and corrosive environments, and early-flaw detection methods and systems used in conjunction with longer-lasting roofing materials and designs.

Obligation of funds will begin as soon as they are received with all but 10% being obligated by the beginning of the 2nd quarter. 100% obligation will occur by the end of fiscal year.

4. (U) FY 1999 PLAN:

- (U) (\$1,000) Complete installation of prototype advanced fender pile and camel concepts, and begin validation testing. Complete validation testing of the falling weight deflectometer for load safety certification. Begin constructability improvement and validation of methods for the structural upgrade of piers and wharves using composite materials.
- (U) (\$1,020) Conduct RPM advanced facility technology validation tests planned in FY 1998. Conduct an analysis of the planned FY 2000 RPM projects to determine best candidates for the FY 2000 validation testing. Coordinate with Navy RPM project managers and CERF to determine the specific objectives and schedule for the FY 2000 tests. Technologies to be tested include techniques for improved surface preparation that enhances coating system adhesion used in conjunction with longer-life coating systems, and use of composite materials as a substitute for traditional materials in facility components subject to high maintenance and replacement costs.

Obligation of funds will begin as soon as they are received with all but 10% being obligated by the beginning of the 2nd quarter. 100% obligation will occur by end of the fiscal year.

(U) FY 1998/FY 1999 PRESBUDG Submit:

1,746	2,149	1,720	2,020
-------	-------	-------	-------

(U) CHANGE SUMMARY EXPLANATION:

(U) Funding: FY 1996 funding reduced by \$2 thousand as part of the Jordanian F-16 financing rescission. FY 1997 funding is decreased by \$90 thousand for NWCf adjustments and general reductions. FY 1998 funding is decreased by \$205 thousand for NWCf carryover, rate adjustments, and general reductions; increases of \$64 thousand in FY 1998 for NWCf adjustments and restoration of partial offset of prior reduction. FY 1999 funding is decreased by \$18 thousand for general program reductions and NWCf adjustments; increases of \$1136 thousand for partial offset of prior general reduction, NWCf adjustment, and to validate and accelerate the implementation of advanced facility technologies for the reduction of the Navy's Real Property Maintenance (RPM) backlog.

(U) Schedule: Not applicable
(U) Technical: Not applicable

C. (U) OTHER PROGRAM FUNDING SUMMARY: (Dollars in thousands) Not applicable.

(U) RELATED RDT&E: A DOD Laboratory Infrastructure Capability Study conducted in FY 1994 by the Director of Defense Research and Engineering (DDR&E) identified civil engineering as a Technology area where DOD could not depend on the private sector for satisfaction of its research requirements. However, this program does utilize the capabilities of the private sector to the maximum extent possible. The execution of this program is consistent with the findings and recommendations of two National Academy of Sciences Reports: "The Role of Federal Agencies in Fostering New Technology and Innovation in Building and Federal Policies to Foster Innovation and Improvement in Constructed Facilities." To ensure that this program focuses on Navy requirements not already being addressed by other programs and uses the results of other programs when it will contribute to the satisfaction of a Navy requirement, the planning and execution of this

(U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: The Combat Systems Oceanographic Performance Assessment (CSOPA) Program Element provides oceanographic/atmospheric research and development for expanded knowledge and improved understanding of the environment and its impact on combat systems performance. Its purpose is to assess, predict and enhance the performance of current and proposed undersea surveillance, tactical and mine warfare and weapons systems. This effort is accomplished through at-sea experimentation, numerical model and data base development, development and evaluation of stand-alone and Command, Control, Communications, Computers, and Intelligence (C4I)-system-embedded prediction/tactical decision aid products, fleet technical support, and system and area technical assessments. Emphasis is placed on shallow water and other harsh environments, and regional conflict and crisis response scenarios. The Advanced Environmental Acoustic Support (AEAS) Project conducts complex oceanographic and acoustic measurements, develops computer prediction products, models and simulations, data bases, and conducts analyses in support of undersea warfare and mine warfare systems. The Advanced Underwater Acoustic Modeling Project (AUAMP) is focused on the development of a family of acoustic system performance prediction products beginning with high fidelity simulation products. The Sensor Performance Prediction Project develops computer-based, on-board capabilities to provide system performance predictions, operating mode selection guidance and tactical decision aids for tactical platforms based on AEAS and AUAMP-developed models and historical data bases using in situ measurements and synoptic data. These guidance products are essential to maximize the effective employment of combat

systems and weapons in highly complex regional conflict littoral warfare areas. The CSOPA Program products are being tailored for, and assimilated into, the onboard Combat Systems and the Joint Maritime Command Information System to operationally provide accurate system performance predictions and into fleet trainers to provide realistic ocean environments in support of warfare simulations. Direct support to existing fleet systems is provided in the Combatant Data Collection thrust which focuses on in situ measurements through operational weapon systems and provides direct, real-time feedback to optimize system performance in tactical situations. The CSOPA Program supports the Joint Mission Areas of Joint Littoral Warfare and Joint Surveillance.

(U) JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under DEMONSTRATION & VALIDATION because it develops and integrates hardware and software for experimental test related to specific ship or aircraft applications.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: The Department of Defense has turned its focus from the global threat of the Soviet Union to the future regional conflict scenarios outlined in the Defense Planning Guidance (DPG). Most of the DPG scenarios require operating naval forces in the earth's littoral waters which are shallow, have highly variable (in space and time) oceanographic conditions and confined maneuvering space. Of key concern to the U.S. Navy is the dual threat posed by very quiet diesel submarines capable of opposing U.S. naval forces and sea mines which will dramatically restrict force mobility and hamper or curtail amphibious operations. To counter these threats, there is an urgent and continuing need for the Navy to fully understand the ocean areas in which they will operate in the future. This project provides the necessary research and development to: a) rapidly and automatically acquire a broad array of meteorological and oceanographic (METOC) data in littoral areas using organic sensors on fleet platforms and use these data to optimize system performance; b) accurately predict the performance of warfighting systems under development or employed in those areas; c) develop new capabilities in environmental acoustic models and data bases to support assessments of regional conflict ocean areas; d) develop a synthetic environment module which will drive future simulations, and e) provide real-time and remote METOC data collection modeling and analysis capabilities.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

UNCLASSIFIED

UNCLASSIFIED

FY 1998/FY 1999 RDT&E,N BUDGET ITEM JUSTIFICATION SHEET

DATE: February 1997

BUDGET ACTIVITY: 4 PROGRAM ELEMENT: 0603785N

PROGRAM ELEMENT TITLE: Combat Systems Oceanographic
Performance Assessment (CSOPA)

PROJECT NUMBER: R0120

PROJECT TITLE: Advanced Environmental
Acoustic Support (AEAS)

- (U) (\$2,650) Began advanced development of Extended Echo Range Sonobuoys (SSQ-110) and Active Distributed Systems. Completed Gulf of Mexico experiment to use the SSQ-110 to measure low angle bottom scattering in shallow water. Began integration and transition of simulations and modeling capabilities to the Navy trainer and simulation communities. Developed an enhanced interface between the user and environmental modules for Generic Acoustic Stimulator System, for use with trainers and simulations.
 - (U) (\$1,700) Completed Build 5 of the Mine warfare Environmental Decision Aids Library (MEDAL) program, designed to provide a planning tool for the Mine Warfare community. Build 5 includes interfaces to the environmental modules, e.g. bathymetry, sediment type, and BT profiles. Evaluated MEDAL during fleet exercises. Began transition to Joint Maritime Command Information System (JMCIS) segments.
 - (U) (\$2,981) Began development and conducted at-sea demonstrations of rapid airborne area oceanographic and acoustic characterization techniques, and transitioned this capability to other Fleet applications. Began development of a METOC Denied Area Measurement Processing System (DAMPS), used to permit real-time characterization of the battlespace environment. Demonstrated similarity between incoherent and coherent bottom scattering at two sites (thus demonstrating applicability of world wide SUS (explosive charge) measurements to Fleet systems such as Low Frequency (LFA)). Developed tactical applications for in-situ measurement of low angle bottom scattering by both Fleet Combatants and Oceanographic measurement vessels. Developed critical environmental factors atlases for surface, Mine Warfare (MIW) and air platforms for potential regional conflict areas. Began development of the required interfaces with the Army Integrated Weather Effects Decision Aid (IWEDA) Project and the incorporation of the Navy/Marine Surf Manual Requirements. Provided advanced graphic development capabilities for METOC models and databases on workstations.
2. (U) FY 1997 PLAN:
- (U) (\$1,070) Continue integration of ocean and atmosphere representation, including effects on platforms, weapons and sensor systems into DOD simulation systems for mission rehearsal, training

and analysis. Evaluate Navy systems performance in surrogate environment and extrapolate to foreign sites of interest.

- (U) (\$2,500) Complete verification and validation of rapid real-time data acquisition capabilities in two littoral environments. Continue development of DAMPS, used to permit real-time characterization of the battlespace environment. Begin development of airborne-remote METOC data acquisition, data base and modeling capabilities in direct support of crisis response, regional conflicts and peace-time scenarios.
- (U) (\$865) Conduct technical feasibility evaluations in data assimilation techniques for real-time and shore-based processing/applications. Conduct technical assessment on the existing data assimilation techniques. Conduct technical feasibility evaluations in data inversion techniques applied to the ocean environment for Navy applications and the identification of the realistic operational applications. Conduct technical assessment on the existing data inversion techniques.
- (U) (\$73) Portion of extramural program reserved for Small Business Innovation Research assessment in accordance with 15 U.S.C.638.

3. (U) FY 1998 PLAN:

- (U) (\$1,707) Continue integration of ocean and atmosphere environmental effects on battlespace platforms, weapons and sensor systems, including simulation for mission rehearsal, training and analysis. Continue assessment of Navy system performance in surrogate environment. Develop data inversion measurement and test plans and identify fleet assets required for test conduct.
- (U) (\$1,900) Perform assessment of temporal/spatial variability of littoral environments, and assess various inversion and assimilation techniques to obtain ocean/atmosphere temporal/spatial variability of littoral

environments. Integration of DAMPS into airborne unmanned vehicles (UAV s). Develop Battlespace characterization techniques to measure environmental data in-situ and transmit to Fleet assets.

4. (U) FY 1999 PLAN:

- (U) (\$3,852) Continue modeling and simulation of atmosphere and ocean environmental effects on Navy systems. Conduct data inversion at-sea proof-of-concept experiment with fleet assets with focus on surface scatter, bottom back scatter, and advanced reverberation algorithm development. Also continue performance studies in surrogate environments.

- (U) (\$3,000) Continue assessments of temporal/ spatial variability of littoral environments, and perform verification and validation of algorithms and databases developed for Fleet use. Continue development of ocean data assimilation systems for characterization of littoral environments.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: As Navy sonar systems become more sophisticated and their use in shallow water is increasing, there is an urgent and continuing need to understand underwater sound boundary interactions and propagation through the oceanic medium. The shallower waters of the earth's littoral regions are characterized by extreme variability in time as well as space. This project is focused on the development of a family of acoustic models which will predict the performance of existing and future Navy sonar systems. Initial efforts have concentrated upon the development of a multi-source, multi-receiver, Anti-Submarine Warfare (ASW) system performance prediction capability in support of active ASW systems currently being planned and developed for use in the 1990's. Further efforts are directed toward the stochastic prediction of performance of mid- and high-frequency tactical and mine warfare sonars, with an eventual goal of high fidelity simulation.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$630) Started development of bottom scattering models for surface Combatant Ships and Mine Underwater Warfare (MUW) sonars and incorporate into high frequency system performance model. Developed high resolution version of Acoustic Sonar Propagation Model to Naval Air Warfare Center (NAWC) to support evaluation of SSQ-110 source.

PROGRAM ELEMENT TITLE: Combat Systems Oceanographic Performance Assessment
(CSOPA)

- (U) (\$190) Verified the range dependent active sonar performance model against data acquired in support of Extended Echo Range sonobuoy and surface ship sonars. Prepared a version of ASPM to be delivered to the Ocean Acoustics Master Library Software Review Board, for acceptance as a Navy Standard Model.
 - (U) (\$714) Completed phase one of HFBL databases for shallow waters and developed algorithms for addressing bottom reverberation through advanced algorithm and data processing techniques. Developed an improved bottom scattering model which includes basement scattering (Delivered to Oceanographic Atmospheric Master Library (OAML) FY 96). Developed and delivered shallow water bottom loss upgrade to OAML in FY 96, completed study of effect of time spread in thick sediments on performance of mid-frequency active systems and developed technique to process shallow water reverberation data. This will be applied to development of a model to account for clutter in system performance prediction.
2. (U) FY 1997 PLAN:
- (U) (\$365) Complete upgrade of existing Navy Standard Low Frequency Bottom Loss model/database to 5Khz, complete interim shallow water clutter prediction models.
 - (U) (\$337) Transition the Acoustic Sonar Propagation Model to the Oceanographic and Atmospheric Master Library as a Navy Standard model/database, develop a broadband propagation model for Fleet use, begin development of shallow water geo-acoustic inversion technique that make use of time spread functions.
 - (U) (\$415) Complete development of bottom scattering model upgrade for low frequencies (less than 500 Hz) and begin initial development of bottom scattering model valid to frequencies of 20 KHz, consistent with existing LFBL.
 - (U) (\$147) Verification and validation of high to mid-frequency models for Surface Ship Combatants, and provide upgrades for model deficiencies.

- (U) (\$31) Portion of extramural program reserved for Small Business Innovative Research assessment in accordance with 15 U.S.C.638.
- 3. (U) FY 1998 PLAN:
 - (U) (\$1,150) Complete development of clutter prediction model, continue development of high frequency bottom/loss scatter model/database, continue development of shallow water geoaoustic inversion algorithms using real-time data, continue development of broadband prediction model for Fleet use, begin development of an Operational Sensitivity model to predict the sensitivity of system performance to environmental factors, and develop improvements to mine warfare acoustic models.
 - (U) (\$100) Begin extending LFBL from the 50 M contour water depth to very shallow water.
 - (U) (\$259) Perform independent verification and validation of models being developed and upgraded.

4. (U) FY 1999 PLAN:

- (U) (\$1,300) Complete development of high frequency bottom model and integration into LFBL, continue development of operational model to predict sensitivity of system performance to the environmental and continue development of shallow water geoaoustic inversion model.
- (U) (\$427) Continue development of extension of bottom loss/bottom scattering databases into very shallow water, and upgrade of MIW acoustic models.

V0823 Sensor Performance Prediction (SPP)	6,354	7,276	6,590	8,847	8,884	9,209	9,720	10,053	CONT.	CONT.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: The SPP program develops on-board software capabilities that provide sensor performance predictions and Tactical Decision Aids (TDA) for all tactical platforms using in-situ measurements, synoptic data and new/high resolution environmental data bases. SPP maximizes the full performance potential of complex sensor systems by increasing their detection/tracking performance. The program is focused on the development of new combat system and mine warfare performance prediction and tactical decision aid capabilities for highly complex littoral environments to support regional conflict scenarios. It addresses the multi-warfare areas, particularly Mine Warfare, shallow water ASW and missile and air defense/strike capabilities that are critical to operate in the littoral and hinterland and includes all platforms (i.e. surface, submarine and air).

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$2,668) Initiated development of a Joint Littoral/Multi-Mission TDA for submarine, air and surface ships that provides an integrated acoustic and non-acoustic combat system performance prediction capability using in-situ and synoptic Meteorological and Oceanographic (METOC) data for the multi-threat, multi-warfare scenario.
- (U) (\$2,097) Continued the development of the initial Electro-Magnetic/Electro-Optic Performance Prediction/Decision Support System for Anti-Submarine, Anti-Missile and Air Defense/Strike Warfare. Tested at-sea.

UNCLASSIFIED

UNCLASSIFIED

FY 1998/FY 1999 RDT&E,N BUDGET ITEM JUSTIFICATION SHEET DATE: February 1997

BUDGET ACTIVITY: 4

PROGRAM ELEMENT: 0603785N

PROGRAM ELEMENT TITLE: Combat Systems Oceanographic Performance Assessment
(CSOPA)

- (U) (\$1,589) Incorporated the prototype Electro-Magnetic and Electro-Optic capabilities into the current surface ship, air and submarine performance prediction system ADM to maximize Expeditionary Warfare decision support in the littoral areas. Tested at-sea.
- 2. (U) FY 1997 PLAN:
 - (U) (\$2,061) Complete initial development of the Joint Littoral/Multi-Mission TDA capability for use in shallow water against diesel submarines/low flying missiles. Fully integrate the best available METOC Battlespace Analysis including in-situ, remotely sensed, synoptic and climatological data into the Joint Littoral/Multi-Mission TDA. Evaluate at-sea during Fleet Regional Conflict/Littoral exercises.
 - (U) (\$1,455) Complete development of MCM tactics and optimization algorithms initiated by the AEAS Program (R0120). Incorporate more robust environmental analysis capability. Begin minefield planning module. Incorporate Mine Warfare capabilities in the Joint Littoral/Multi-Mission TDA. Evaluate at-sea.
 - (U) (\$1,657) Develop new functionality and corrections for the Electro-Magnetic/Electro-Optic Performance Prediction/Decision Support System based on initial at-sea use and Fleet feedback. Develop required combat system connectivity to measure systems performance. Test at-sea.
 - (U) (\$2,032) Develop new functionality for the submarine, air and surface ship ADM to further address the requirements for Tactical Control in the multi-threat, multi-warfare scenarios. This new functionality will include predictions for advanced combat systems, greater use of highly variable in-situ/remotely sensed and synoptic METOC data, increased connectivity/integration with the shipboard tactical decision process and "greater automation/event triggering" to reduce manning requirements. Test at-sea.
 - (U) (\$71) Portion of extramural program reserved for Small Business Innovation Research assessment in accordance with 15 U.S.C.638.

Performance Assessment (CSOPA)

PROJECT TITLE: Sensor Performance
Prediction (SPP)

3. (U) FY 1998 PLAN:

- (U) (\$2,043) Develop performance prediction capability for additional Electro-Magnetic/Electro-Optic sensors. Address new sensor suites scheduled for incorporation on New Attack Submarine (NSSL), SQO-89 Block III Ships and LAMPS helicopter upgrades (SH-60R). Incorporate new capability based on Shipboard Tactical Atmospheric Forecast Capability (STAF) developments and in-situ/remote measurement techniques. Evaluate at-sea.
- (U) (\$2,109) Initiate development of sensor performance prediction and employment TDAs which address new generation undersea warfare systems (Airborne Low Frequency Sonar (ALFS), Towed Active Receive Subsystem (TARS), High Frequency Sonar Program (HFSP)). Maximize use of in-situ collected environmental data fused with synoptic data. Ensure connectivity to both organic combat system and remote sites in support of Joint Littoral Operations. Integrate into platform ADM s and evaluate at-sea.
- (U) (\$1,120) Based on submarine security and survivability developments, initiate development of automated vulnerability assessment tactical decision aid capabilities and integrate them with emerging COTS combat systems. Update automatic event triggering capabilities based on evaluation of previous years efforts. Integrate into platform ADM s and evaluate at-sea.
- (U) (\$1,318) Develop atmospheric and oceanographic data acquisition and application capabilities. Provide real time capability to utilize environmental parameters and distribute these to other Fleet combatants and shore sites. Support Oceanographer of the Navy s Battlespace METOC Data Acquisition, Assimilation and Application strategy. Test initial implementation at-sea.

4. (U) FY 1999 PLAN:

BUDGET ACTIVITY: 4 PROGRAM ELEMENT: 0603785N

PROGRAM ELEMENT TITLE: Combat Systems Oceanographic Performance Assessment (CSOPA)

PROJECT NUMBER: V0823
PROJECT TITLE: Sensor Performance Prediction (SPP)

- (U) (\$2,123) Incorporate prototype Mine Warfare tactical decision aids in baseline surface ship, air and submarine performance prediction systems. Maximize littoral operation support by ensuring interoperability of system via existing Fleet communication mechanisms.
- (U) (\$3,362) Complete development of initial sensor prediction capabilities for acoustic and non-acoustic sensors scheduled to be installed on Fleet combatants. Apply advanced COTS visualization techniques to facilitate operator understanding of complex littoral environmental effects on sensor performance. Integrate into appropriate platform ADM s. Perform at sea evaluation of new capabilities.
- (U) (\$1,858) Integrate platform vulnerability assessment TDA into surface ship, submarine and air ADM s to perform vulnerability assessment for acoustic and non-acoustic sensors and weapons. Evaluate functionality during at-sea tests.
- (U) (\$1,504) Incorporate additional environmental sensor interface capabilities to allow for real time monitoring and measurement of key environmental parameters in support of the Oceanographer of the Navy s Battlespace METOC Data Acquisition, Assimilation and Application strategy. Implement in the platform ADM s and evaluate at-sea.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This project provides funding for the continuation of on-going research and development projects that were initiated between the U.S. Navy and allies under the Office of the Secretary of Defense (OSD) NATO Cooperative Research and Development (R&D) program (Program Element (P.E.) 0603790D) in prior years. Each year OSD will provide seed money to initiate worthy R&D projects for which the Navy will provide continuation funding from this P.E.

(U) JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under DEMONSTRATION & VALIDATION because it develops and integrates hardware for experimental tests related to specific ship or aircraft applications.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS: Not applicable

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: The Naval Surface Fire Support (NSFS) Mission will be met near term by gun, missile and C4I weapons systems. The NSFS Program Office will acquire all gun related systems in order to meet the range, accuracy, and lethality requirements of the Mission Needs Statement dated 11 May 1992. Gun related systems are to include: a 5" MK 45 modification, a 5" extended range guided munitions with an internal Global Positioning System (GPS) receiver and Inertial Navigation System (INS) coupled guidance system delivering a submunition payload to targets at ranges exceeding 41 NM to be known as the EX-171 Hammer (formerly Precision Guided Munition (PGM)), a gun fire control system and some ballistic ammunition improvements. Missile related systems include a ship launched strike missile reaching out to 150 NM. Both gun and missile weapons will require a C4I system of commensurate capability. These combined weapon systems will provide the required standoff capability to safely destroy shore targets. Technologies which have been developed and funded by other agencies are being leveraged, not only as a means to determine near term benefits to surface combatants, but with the goal of ensuring that all existing and emerging technologies are maximally exploited. The program will provide critical NSFS capabilities necessary to support all phases of amphibious operations. The Acquisition Decision Memorandum (November 1992) approved initiation of program Phase 0.

(U) JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under DEMONSTRATION & VALIDATION because it develops and integrates hardware for experimental test related to specific ship or aircraft applications.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$9,702) Awarded Contract for EX-171 EDMs and in-house EX-171 support.
- (U) (\$12,122) Completed Milestone II for the 5" MK 45 Modification. Awarded contract for 5" MK 45 Modification and in-house support.
- (U) (\$2,020) Continued EX-171 Advanced Solid Propellant (ASP) charge. Test and evaluation of alternative explosives for the Army XM80 submunition to meet Navy Insensitive Munition requirements.
- (U) (\$3,000) Conducted EX-171 Risk Mitigation efforts.
- (U) (\$5,361) Forward financing FY 1997 requirements for low execution rates.

2. (U) FY 1997 PLAN:

- (U) (\$15,000) Continue development of EX-171 EDMs.
- (U) (\$2,500) Develop EX-171 Advanced Solid Propellant Charge.
- (U) (\$500) Preparation of EX-171 preliminary technical documentation and planning, including logistics documentation.
 - (U) (\$2,000) Perform EX-171 component testing (Government-In-house support).
- (U) (\$500) Complete EX-171 Preliminary Design Review and Critical Design Review.
- (U) (\$3,000) Continue Risk Reduction efforts for GPS/INS.
- (U) (\$10,000) Exercise Contract Option for 5" MK 45 Modification and GFP preparation.
- (U) (\$2,000) Continue ballistic projectile qualification for 5" MK 45 Modification.
- (U) (\$1,500) Continue 5" MK 45 Modification Conventional propellant charge qualification.

PROGRAM ELEMENT TITLE: Gun Weapons

PROJECT TITLE: Naval Surface Fire

Systems Technology

- (U) (\$1,241) Conduct 5" MK 45 Modification system interface (Fire Control and Ammunition).
- (U) (\$600) Develop 5" MK 45 Modification Gun Fire Control.
- (U) (\$3,000) Concept development and engineering analysis of the Army ATACM missile integration onto naval platforms to meet Marine Corps requirements.
- (U) (\$1,863) Develop Warfare Mission Planning System to allow effective use of NSFS capability with a FY 2001 IOC.
- (U) (\$1,002) Portion of extramural program reserved for Small Business Innovation Research assessment in accordance with 15 U.S.C. 638.
- (U) (\$5,361) Forward financing FY 1998 requirements for low execution rates in FY 1996.

3 (U) FY 1998 PLAN:

- (U) (\$21,500) Continue development of EX-171 EDMs and in-house support.
- (U) (\$2,520) Procure Long Lead Material for 90 LRIP ERGMs in support of OPEVAL.
- (U) (\$13,789) Exercise Contract Option for 5" MK 45 Modification and GFP Preparation.

4. (U) FY 1999 PLAN:

- (U) (\$24,500) Continue development of EX-171 EDMs and in-house support.
- (U) (\$4,410) Procure 90 LRIP ERGMs in support of OPEVAL.
- (U) (\$4,847) Perform EX-171 Land Based Testing and In-House support.
- (U) (\$10,000) Conduct EX-171 TECHEVAL and In-House support.
- (U) (\$9,228) Exercise Contract Option for 5" MK 45 Modification and GFP Preparation.

B. (U) PROGRAM CHANGE SUMMARY:

- (U) FY 1997 President's Budget:
- (U) Adjustments from FY 1997 PRESBUDG:
- (U) FY 1998/99 PRESBUDG Submit

	FY 1996	FY 1997	FY 1998	FY 1999
	32,958	42,204	48,190	44,252
	- 753	+7,863	-10,381	+8,733
	32,205	50,067	37,809	52,985

(U) CHANGE SUMMARY EXPLANATION:

(U) Funding: Decrease of \$753K in FY 1996 due to minor pricing adjustments and SBIR assessment. In FY 1997 increase provided for concept development of the Army ATACM missile; development of warfare mission planning and continuation of ERGM risk reduction. FY 1998 change due to program restructure and low execution rates in FY 1996. FY 1999 change due to revised testing program and increase for ERGM LRIP.

- (U) Schedule: IOC delayed to FY 2002.
- (U) Technical: Not Applicable

 Articles (Unit cost of RDT&E articles not separately priced)

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: The Joint Strike Fighter (JSF) Program (formally JAST) will develop and field an affordable, highly common family of next generation strike aircraft for the USN, USMC, USAF and allies. Current program emphasis is on facilitating the evolution of fully validated and affordable joint operational requirements, and demonstrating cost leveraging technologies and concepts to lower risk prior to entering Engineering and Manufacturing Demonstration (E&MD) in FY 2001. This is a joint program with no executive service. Navy and Air Force each provide approximately equal shares of annual funding for the program effective in FY 1995. The Defense Advanced Research Projects Agency (DARPA) and the United Kingdom (UK) contribute funding effective in FY 1996. The Netherlands, Norway and Denmark will contribute funding effective in FY 1997 under a Multi-Lateral Agreement.

(U) JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under DEMONSTRATION & VALIDATION because it integrates hardware for test related to specific ship or aircraft applications.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS: (Breakout reflects Navy, Air Force, DARPA and UK funding)

(U) (\$ 60,768) Completed concept definition and design research for weapon system concepts for a tri-service family of aircraft; received contractors preferred weapon system concepts and recommended development and demonstration plans; and continued affordability analyses.

(U) (\$ 7,000) Conducted Phase I of the Alternate Engine Program including study efforts and preliminary design risk reduction activities.

(U) (\$111,587) Completed technology maturation concept definition and design research; continued demonstrations and assessments in the areas of airframe, flight systems, manufacturing and producibility, propulsion, mission systems and supportability.

UNCLASSIFIED

FY 1998 RDT&E,N BUDGET ITEM JUSTIFICATION SHEET DATE: February 1997

BUDGET ACTIVITY: 4 PROGRAM ELEMENT: 0603800N PROJECT NUMBER: D2209
PROGRAM ELEMENT TITLE: JOINT ADVANCED STRIKE TECHNOLOGY (JAST) PROGRAM PROJECT TITLE: JASTP

(U) (\$ 7,101) Continued strategy-to-task analysis and strike warfare demonstrations and assessments to facilitate the Services joint requirements definition.

(U) (\$ 5,065) Continued modeling and simulation activities to support strike warfare mission area analysis.

(U) (\$ 5,502) Completed Advanced Short Takeoff and Vertical Landing (ASTOVL) risk mitigation efforts, integrated with JAST Program Concept Development tasks.

(U) (\$ 7,152) Supported program operations, including program office functions.

(U) (\$204,175) Total

2. (U) FY 1997 PLAN: (Breakout reflects Navy, Air Force, DARPA, UK and Multi-Lateral funding)

(U) (\$411,620) Competitively awarded contracts to Boeing and Lockheed Martin for ground and flight demonstrations and continued concept refinement for a tri-service family of aircraft that meets the Services needs and optimizes commonality among the variants to minimize life cycles costs (LCC); award contract to Pratt & Whitney for supporting propulsion efforts.

(U) (\$ 25,000) Commence Phase II of the Alternate Engine Program, which continues detailed design and begins hardware testing.

(a) Within this amount, \$10M has been included for early risk reduction on critical technologies for the alternative engine.

(b) The Department is evaluating acceleration of the alternative engine to meet a Lot 4 production introduction.

(U) (\$ 6,308) Continue requirements analysis efforts including Cost & Operational Trades (COPT) to facilitate the Services joint requirements definition.

(U) (\$ 10,292) Continue modeling and simulation activities to support strike warfare mission area analysis.

(U) (\$172,695) Continue technology maturation demonstrations and assessments in the areas of airframe, flight systems, manufacturing and producibility, propulsion, mission systems, and supportability. Commence systems engineering support for the Concept Demonstration Phase in the areas of system test, air vehicle analysis and integration, advanced cost estimating, survivability, integrated flight and propulsion control and carrier suitability.

B. (U) PROGRAM CHANGE SUMMARY: (Dollars in thousands)

	FY 1996	FY 1997	FY 1998	FY 1999	Total
(U) FY 1997 President's Budget:	\$81,215	\$246,833	\$421,848	\$457,300	\$1,592,855
(U) Adjustments from Pres Budget:	-1,234	-757	+27,007	-13,778	+ 28,244
(U) FY 1998 President's Budget:	\$79,981	\$246,076	\$448,855	\$443,522	\$1,621,099

(U) CHANGE SUMMARY EXPLANATION:

(U) Funding: FY 1996 decrease reflects CNO PA&E (-\$18), Jordanian Rescission (-\$430), SBIR Transfer (-\$1,123) and Reversed to Increase (+\$337) adjustments. FY 1997 has been decreased by a net of \$757 reflecting the increase of \$10,000 for alternate engine efforts offset by decreases for Non-FFRDC reduction (-\$244), Navy Working Capital Fund (NWCf) Savings (-\$5,136), General Reductions (-\$5,136) and Budgetary Resolution (-\$241). FY 1998 increase reflects the replacement of funding formerly provided by DARPA (+\$32,612) and decreases attributed to Balance adjustments (-\$1,046), NRL BRAC Savings (-\$15), Respread (-\$488), Carryover (-\$165), Acquisition Internship Program (-\$223), Acquisition Center for Excellence (-\$255), AN-SSQ-53 (-\$1,800), Desk Book (-\$115) and Inflation savings (-\$1,432) adjustments. FY 1999 net decrease reflects the replacement of funding formerly provided by DARPA (+\$18,226) and the decreases attributed to Balance Adjustments (-\$983), NRL BRAC Savings (-\$95), Respread (-\$496), NWCf Savings

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: The Arsenal Ship project has two major phases: (1) development of a Demonstrator Ship using R&D funds and (2) a subsequent SCN-funded program. The Demonstrator Ship is a prototype used to establish the proof-of-principle for high fire-power, low manning strike mission ships. The Chief of Naval Operations has directed that the Demonstrator Ship start at-sea testing prior to award of the first SCN ship. The schedule requires a Functional Design phase in FY 1997. Detail Design and Construction starting in FY 1998, and at-sea tests and trials starting in FY 2000. Initial concept development was funded in PE 0603563N, S2196 in FY 96. Congress appropriated the FY 97 funding under BA 4, PE 0603852N. Funding for FY98 and later are designated BA 5, PE 0604310N.

(U) JUSTIFICATION FOR BUDGET ACTIVITY. This program is funded under DEMONSTRATION & VALIDATION because it will demonstrate via detailed designs the concepts established by the proof-of-principle. The program will test the ship's readiness for transition to full production.

PROGRAM ELEMENT TITLE: Arsenal Ship

PROJECT NUMBER: S2294

PROJECT TITLE: Arsenal Ship Development

3. (U) FY 1997 PLAN:

- (U) (\$23,347) Perform proposal evaluation of Concept Designs/source selection for Functional Designs. Perform Functional Designs. Develop detailed test plan. Products that will be produced include: source selection results for concept evaluations; three extensive Demonstrator Ship Contract Design drawing packages, study reports, plans and specifications suitable for a ship procurement; management plans for technology developments; Test Plan for post-delivery testing; Navy/independent cost estimates to compare with industry costs; project plans and documentation for managing the design and construction phases; detailed proposal evaluation/source selection plan. Funds to begin obligating on 1 Nov 96 and be fully obligated by 15 July 97.
- (U) (\$630) Portion of extremutal program reserved for Small Business Innovative Research assessment in accordance with 15 U.S.C. 638.

4. (U) FY 1998 PLAN:

- (U) (\$102,994) Perform proposal evaluation of Functional Designs, leading to selection of a single industry team to build the Arsenal Ship Demonstrator. Develop the design details suitable for ship production, order materials and equipments, negotiate purchase agreements for combat systems equipment with vendors, and initiate construction. Products that will be produced include: source selection results for functional design; Detailed Design drawing packages, study reports, plans and specifications suitable for ship production; management plans for the ship production and test phases. Funds to begin obligating on 1 Nov 97 and be fully obligated by 1 July 98.

5. (U) FY 1999 PLAN:

- (U) (\$139,499) Continue construction of the Arsenal Ship Demonstrator. Lay the keel and start fabrication of structural steel, piping, machinery and information systems components. Pre-test combat and information systems at shore-based facilities. Funds to begin obligating on 1 Nov 98 and be fully obligated by 1 Nov 98.

(U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This program element provides for the engineering, development, integration, adaptation, and testing of new and/or modernized precision air traffic control and landing aid. Joint Precision Approach and Landing System (JPALS) hardware and software are required to provide improved flight safety and more reliable all-weather landing capabilities ashore and afloat. Funded programs are required to upgrade or replace aging landing equipment on aircraft, aircraft carriers, amphibious ships, Naval Air Stations, and Navy/Marine Corps tactical/expeditionary airfields and remote landing sites. Development of the JPALS hardware is required for Navy unique ship, shore and avionics applications.

(U) JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under ENGINEERING & MANUFACTURING DEVELOPMENT because it encompasses engineering and manufacturing development of new end-items prior to production approval decision.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: This Program Element (PE) contains two projects: Over-the-Horizon (OTH) Targeting and Space and Electronic Warfare (SEW) Engineering. Both projects are systems engineering non-acquisition programs with the objectives of developing, testing and validating Naval Command, Control, Communications, Computers, Intelligence, and Reconnaissance (C4ISR) architectures to support naval missions in Joint and Coalition Theater. The mission of this program element is carried out by multiple tasks that are used to ensure Naval Command, Control, Communications, Computers and Intelligence (C4I), Surveillance, and Command and Control Warfare (CW) components of SEW are effectively integrated into the C4ISR architectures. The Program additionally ensures that (1) the composite operational capabilities of SEW systems (not the individual component systems) conform to the Naval C4ISR architecture as related to the objectives of National Defense Strategy and evolving joint visions and direction, such as COPENICUS...Forward, "Forward...From the Sea" and C4I For the Warrior, the Defense Science Board Summer Study Task Force on Information Architecture for the Battlefield and are guided by CINC requirements; and (2) that SEW systems and systems integration effort involves leading-edge technology transfer of information processing technologies primarily through integration of government and commercial off-the-shelf (COTS/GOTS) products to enhance the Navy's operational capability, interoperability, flexible reconfiguration, as well as reduce costs.

(U) JUSTIFICATION FOR BUDGET ACTIVITY: This program is funded under DEMONSTRATION & VALIDATION because it develops and integrates hardware for experimental test related to specific ship or aircraft applications.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: The Over-the-Horizon Targeting (OTH-T) project supports prototyping and engineering activities critical to the development of operational capabilities to target TOMAHAWK and HARPOON cruise missiles beyond the sensor range of the launch platforms. Specifically, to: Demonstrate enhanced capability to integrate sensor data using prototype sensor interface systems, and provide that information via satellite communications to (1) the Force Over-the-Horizon Track Coordinator (FOTC) for input into the common tactical/operational picture, and (2) to TOMAHAWK and HARPOON cruise missile targeting systems. This line supports the promulgation of composite OTH-T system specifications; Certifies the interoperability of, and exercises configuration control over any system that operates on the Officer-in-Tactical Command Information Exchange System (OTCIXS) net. This ensures the integrity of the net for transmission of OTH-T messages as new systems come onto the net, or as existing systems undergo substantive software revisions/upgrades. This line also provides technical expertise afloat and ashore via a cadre of highly-trained Fleet Systems Engineers who ensure smooth integration of new capabilities to enhance OTH-T during major Fleet exercises and demonstrations which are used to validate and evaluate developed portions of Navy Battle Force Information Architecture.

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (\$906) Provided Fleet Engineering Support to Fleet Commanders in Chiefs (CINCs) to perform the following: monitored technical performance of Officer in Tactical Command Information Exchange System (OTCIXS) during introduction and demonstration of new capabilities, and provided end-to-end system engineering expertise to ensure smooth integration of Naval Tactical Command and Control System (NTCCS) into the Joint Maritime Command Information Strategy (JMCIS, GCCS, and coalition interfaces).
- (\$909) OTH Targeting Interoperability Certification - Utilized Reconfigurable Land Based Test Site (RLBTS) to test evolutionary software enhancements of NTCCS to verify compliance with interoperability requirements before placing any system on the operational OTCIXS network.

2. (U) FY 1997 PLAN:

- (U) (\$225) Conduct prototyping and demonstrations of OUTLAW HAWKEYE, an initiative to field advanced communications information management and real time intelligence package for the E-2C Aircraft. Evaluate potential packages and E-2C architecture.
- (U) (\$585) Provide Fleet Engineering Support to Fleet CINCs to perform the following: monitor technical performance of OTCIXS during testing of interoperability of Advanced Tomahawk Weapon Control System (ATWCS), advanced submarine combat system (AN/BSY-2), migration of systems into JMCIS, and provide end-to-end system engineering expertise to ensure smooth integration of these same systems into the Fleet. Efforts have been reduced by \$174K as a result of low expenditures in the accounting system for FY 1995.
- (\$4) Portion of extramural program reserved for Small Business Innovation Research assessment in accordance with 15 U.S.C.638.

PROJECT TITLE: OTH Targeting

- (U) (\$563) OTH Targeting Interoperability Certification - Utilize RLBTs to test evolutionary software enhancements, i.e., systems migration into JMCIS, ATWCS, and BSY-2, to verify compliance with interoperability requirements. Efforts have been reduced by \$157K as a result of low expenditures in the accounting system for FY 1995.
- 3. (U) FY 1998 PLAN:
 - (\$276) Develop hardware/software packages for Command and Control (C2) aircraft on a cooperative basis with industry and the Air Force.
 - (\$693) Provide Fleet Engineering Support to Fleet CINCs to perform the following: monitor technical performance of OTCIXS during testing of interoperability of prototype systems into JMCIS, provide end to end system engineering expertise to ensure smooth integration of these same systems into the Fleet, and provide the testing environment which will aid in the integration of such systems for Fleet use.
 - (\$648) OTH Targeting Interoperability Certification - Utilize RLBTs to test evolutionary software enhancements, i.e., systems migration into JMCIS or GCCS, to verify compliance with interoperability requirements.
- 4. (U) FY 1999 PLAN:
 - (\$311) Demonstrate and evaluate OUTLAW HAWKEYE package.
 - (\$803) Provide Fleet Engineering Support to Fleet CINCs to perform the following: monitor technical performance of OTCIXS during testing of interoperability of prototype systems into JMCIS, provide end-to-end system engineering expertise to ensure smooth integration of these systems into the Fleet, and provide the testing environment which will aid in the integration of such systems for Fleet use.
 - (\$723) OTH Targeting Interoperability Certification - Utilize RLBTs to test evolutionary software enhancements, i.e., systems migration into JMCIS or GCCS, to verify compliance with interoperability requirements.

A. (U) MISSION DESCRIPTION AND BUDGET ITEM JUSTIFICATION: Space and Electronic Warfare (SEW) Engineering is a non-acquisition systems engineering effort and has the objectives of developing, testing and validating a Naval Command, Control, Communications, Computers, Intelligence, and Reconnaissance (CICIR) architecture to support naval missions in Joint and Coalition Theater. The mission is carried out by multiple tasks that are used to ensure Naval Command, Control, Communications, Computers and Intelligence (CICIR), Surveillance, and Information Warfare components are effectively integrated into the CICIR architecture. The Project additionally ensures that (1) the composite operational capabilities of the individual component systems conform to the CICIR as related to the objectives of National Defense Strategy and evolving joint visions and direction, such as COPENICUS...Forward, "Forward...From the Sea" and CI For the Warrior, the Defense Science Board Summer Study Task Force on Information Architecture for the Battlefield. This effort is guided by CINC requirements; and (2) the need to integrate leading-edge information processing technologies primarily through the use of government and commercial off-the-shelf (COTS/GOTS) products to enhance the Navy's operational capability, interoperability, flexible reconfiguration, as well as reduce costs. CICIR architectures support the following activities in achieving a fully integrated, interoperable Naval CI system: identify technology developments that can be brought to bear to meet and validate CICIR operational objectives, address prioritized CINC issues; integrate Naval CI system developments, including demonstrations from other services and commercially developed products in support of Joint Warfare Interoperability Demonstrations (JWID); develop interface and connectivity standards based architectures to support the enhanced operational capabilities in support of the CICIR architectures; extract lessons learned for feedback from research, development, and acquisition programs to support further CICIR architecture development efforts or more extensive implementation. This effort also performs high-level systems architecture/engineering to support long-range planning for COPENICUS...Forward, CI For the Warrior, Theater Battle Management (in conjunction with the Air Force), Digitization of the Battlefield (in conjunction with the Army), Theater Ballistic Missile Defense, Mine Warfare, Amphibious Warfare integration into CICIR, the Defense Information Infrastructure (DII) and coalition force architectures; as well as technical architecture/engineering to support CI Office of the Secretary of Defense (OSD) joint technical architecture initiatives.

FY 1998 RDT&E,N BUDGET ITEM JUSTIFICATION SHEET

DATE: February 1997

BUDGET ACTIVITY: 4 PROGRAM ELEMENT: 0604707N PROJECT NUMBER: X2144
PROGRAM ELEMENT TITLE: SEW Architecture/Eng Support PROJECT TITLE: SEW Engineering

(U) PROGRAM ACCOMPLISHMENTS AND PLANS:

1. (U) FY 1996 ACCOMPLISHMENTS:

- (U) (\$966) Developed plans for the integration of maturing system developments, and military and commercial technologies that support Copernicus...Forward concept into the annual Joint Warrior Interoperability Demonstration (JWID). Plans incorporate the use of enhanced operational capabilities in key CINC priority areas and Joint Mission Area (JMA) Assessment Thrust Areas including high capacity communications, improved Command and Control Warfare (C²W), integrated land and flight architecture, trusted systems/multi-level security, improved sensors/strike planning, common tactical/operational picture, theater air defense/force protection, and combat identification.
- (U) (\$1,825) Developed a Mine Warfare Operational and Systems Architecture based on the multi-tier architecture framework of Operational, System and Technical, to support Naval Missions in a Joint and Coalition Theater. Architectural development consisted of (1) assisting OPNAV, Navy Doctrine Command, and Fleet Commanders in the development of Operational Architectures and maintain documentation describing these Operational Architectures; (2) defining System Architecture parameters, attributes, and characteristics necessary to ensure that Program Executives and Managers acquire systems that achieve the desired operational objectives; and (3) defining the appropriate Technical Architectural standards and interfaces to achieve fully interoperable systems. An additional \$250K is available due to low expenditures to forward finance FY 1997 requirements.
- (U) (\$770) Developed a high-level systems architecture/engineering process to support long range planning for COPERNICUS...Forward, C⁴I for the Warrior, Joint Air Operations Functional Process Improvement, Theater Battle Management (in conjunction with the Air Force), Digitization of the Battlefield (with the Army), Theater Ballistic Missile Defense, Mine Warfare, Amphibious Warfare and integration into the DII. Extracted lessons learned for feedback to research, development, and acquisition programs to support further architectural developments. Participated in Office of the Secretary of Defense (OSD) and joint architectural working groups and panels.

PROJECT TITLE: SEW Engineering

2. (U) FY 1997 PLAN:

- (U) (\$941) The U.S. Navy is the lead service for planning, coordination and execution of FY-97 s Joint Warrior Interoperability Demonstration (JWID). As lead service, coordinate all participation and develop plans for the integration of maturing system developments, military and commercial technologies that support enhanced operational capability in key Department of Defense (DOD) priority areas and Joint Mission Area (JMA) Assessment Thrust Areas. These include high capacity communications, improved Command and Control Warfare (C²W), integrated landfight architecture, trusted systems/multi-level security, improved sensors/strike planning, common tactical/operational picture, theater air defense/force protection, and combat identification.
- (U) (\$1,817) Continue to develop and validate a Naval C⁴ISR Architecture based the multi-tier architecture framework of Operational, System and Technical, to support Naval missions in a Joint and Coalition Theater. Architectural development will consist of (1) assisting OPNAV, Navy Doctrine Command, and Fleet Commanders in the development of Operation Architectures for Amphibious and Strike Warfare, and maintain documentation describing these Operational Architectures; (2) defining System Architecture parameters, attributes, and characteristics necessary to ensure that Program Executives and Managers acquire systems that achieve the desired operational objectives; and (3) defining the appropriate Technical Architectural standards and interfaces to achieve fully interoperable systems. Participate with the Joint Battle Center and Naval Battle Laboratories to verify and validate operational and system architectures. The Amphibious Warfare and Strike Warfare operational and systems architectures will be completed. Theater Air Defense architectures will be updated. Develop joint technical architecture in cooperation with other services. An additional \$250K from FY-96 is available due to low expenditures to forward finance FY 1998 requirements.
- (U) (\$778) Develop high-level systems and operational architecture processes to support long range planning for COPENNICUS...Forward, C⁴I for the Warrior, Joint Air Operations Functional Process Improvement, Theater Battle Management (in conjunction with the Air Force), Digitization of the Battlefield (with the Army), Theater Ballistic Missile Defense, Amphibious Warfare, Strike Warfare and integration into the DII. Extract lessons learned for feedback to research, development, and acquisition programs to support further architecture development efforts. An integrated C⁴ISR systems architecture, integrated node list, and hierarchical data dictionary will be completed. Participate in OSD and joint architectural working groups and panels.
- (U) (\$47K) Portion of extramural program reserved for Small Business Innovation Research assessment in accordance with 15 U.S.C.638.

3. (U) FY 1998 PLAN:

- (U) (\$1,000) Develop plans for the integration of maturing system developments, military and commercial technologies that support enhanced operational capabilities in key CINC priority areas and Joint Mission Area (JMA) Assessment Thrust Areas into the annual Joint Warrior Interoperability Demonstration (JWID). Integration plans will include high capacity communications, improved Command and Control Warfare (C²W), integrated landfight architecture, trusted systems/multi-level security, improved sensors/strike planning, common operational picture, collaborative planning, knowledge based systems, smart push-warrior pull data flow, theater air defense/force protection, and combat identification.
- (U) (\$1,738) Continue to develop and validate a Naval C⁴ISR Architecture based the multi-tier architecture framework of Operational, System and Technical, to support Naval missions in a Joint and Coalition Theater. Architectural development will consist of (1) assisting OPNAV, Navy Doctrine Command, and Fleet Commanders in the continuing upgrade of Operation Architectures and maintain documentation describing the Operational Architectures; (2) provide system architecture parameters, attributes, and characteristics necessary to ensure that Program Executives and Managers acquire systems that achieve the desired operational objectives. Participate with the Joint Battle Center and Naval Battle Laboratories to verify and validate operational and system architectures. The Amphibious systems architecture will be completed. Previously delivered operational architectures will be updated. This program was reduced \$250K as a result of low FY 1996 expenditures.
- (U) (\$350) Develop the high-level systems and operational architecture processes to include long range planning for C⁴OPERNICUS...Forward, C⁴I for the Warrior, Joint Air Operations Functional Process Improvement, Theater Battle Management (in conjunction with the Air Force), Digitization of the Battlefield (with the Army), Marine Air Ground Task Force (MAGTF) C⁴I and integration into the DII. An updated integrated C⁴ISR systems architecture, integrated node list, information exchange requirements and hierarchical data dictionary will be provided. Participate in OSD and joint architectural working groups and panels.

4. (U) FY 1999 PLAN:

- (U) (\$1,000) Develop plans for the integration of maturing system developments, military and commercial technologies that support enhanced operational capabilities in key CINC priority areas and Joint Mission Area (JMA) Assessment Thrust Areas into the annual Joint Warrior Interoperability Demonstration (JWID). Integration plans will include high capacity communications, improved Command and Control Warfare (C²W), integrated landfight architecture, trusted systems/multi-level security, improved sensors/strike planning, common operational picture, collaborative planning, knowledge based systems, smart push-warrior pull data flow, theater air defense/force protection, and combat identification.
- (U) (\$3,100) Continue to develop and validate a Naval C⁴ISR Architecture based the multi-tier architecture framework of Operational, System and Technical, to support Naval missions in a Joint and Coalition Theater. Architectural development will consist of (1) assisting OPNAV, Navy Doctrine Command, and Fleet Commanders in the development of operation and overarching architectures and maintain documentation describing the Operational Architectures; (2) provide system architecture parameters, attributes, and characteristics necessary to ensure that Program Executives and Managers acquire systems that achieve the desired operational objectives. Participate with the Joint Battle Center and Naval Battle Laboratories to verify and validate operational and system architectures. Three additional systems architectures will be completed. Amphibious Warfare operational architecture will be updated.
- (U) (\$740) Update the high-level systems and operational architecture processes to support long range planning for COPENICUS...Forward, C⁴I for the Warrior, Joint Air Operations Functional Process Improvement, Theater Battle Management (in conjunction with the Air Force), Digitization of the Battlefield (with the Army), Marine Air Ground Task Force (MAGTF) C⁴I architectures. An updated information exchange requirement list, integrated node list, and hierarchical data dictionary will be completed. Participate in OSD and joint architectural working groups and panels.

PROJECT TITLE: SEW Engineering

B. (U) PROGRAM CHANGE SUMMARY:

	FY 1996	FY 1997	FY 1998	FY 1999
(U) FY 1997 PRESIDENT S BUDGET:	3,623	3,768	3,904	4,911
(U) ADJUSTMENTS FROM FY 1997 PRESBUDG:	-62	-185	-816	-71
(U) FY 1998 PRESIDENT S BUDGET SUBMIT:	3,561	3,583	3,088	4,840

(U) CHANGE SUMMARY EXPLANATION:

FY 1996: Change reflects decreases of \$4K for the Jordan Rescission; \$9K decrease for Administrative and Personal Services rescission; and \$49K decrease for SBIR.

FY 1997: Change reflects a decrease of \$185K for Congressional undistributed general adjustments.

FY 1998: Change reflects a decrease of \$56K for NWCF adjustments; decrease of \$2K for minor Navy POM decision; \$250K decrease for poor expenditure performance in FY96; \$500K decrease for C4I program reduction; and \$8K decrease for inflation.

FY 1999: Change reflects a decrease of \$43K for NWCF adjustments; \$11K decrease for a minor Navy POM decision; and \$17K decrease for inflation.

C. (U) OTHER PROGRAM FUNDING SUMMARY: Not applicable.

(U) RELATED RDT&E: (SEW) Architecture/Engineering Support program element relates to all Naval C4I related efforts.

D. (U) SCHEDULE PROFILE: Not applicable.
